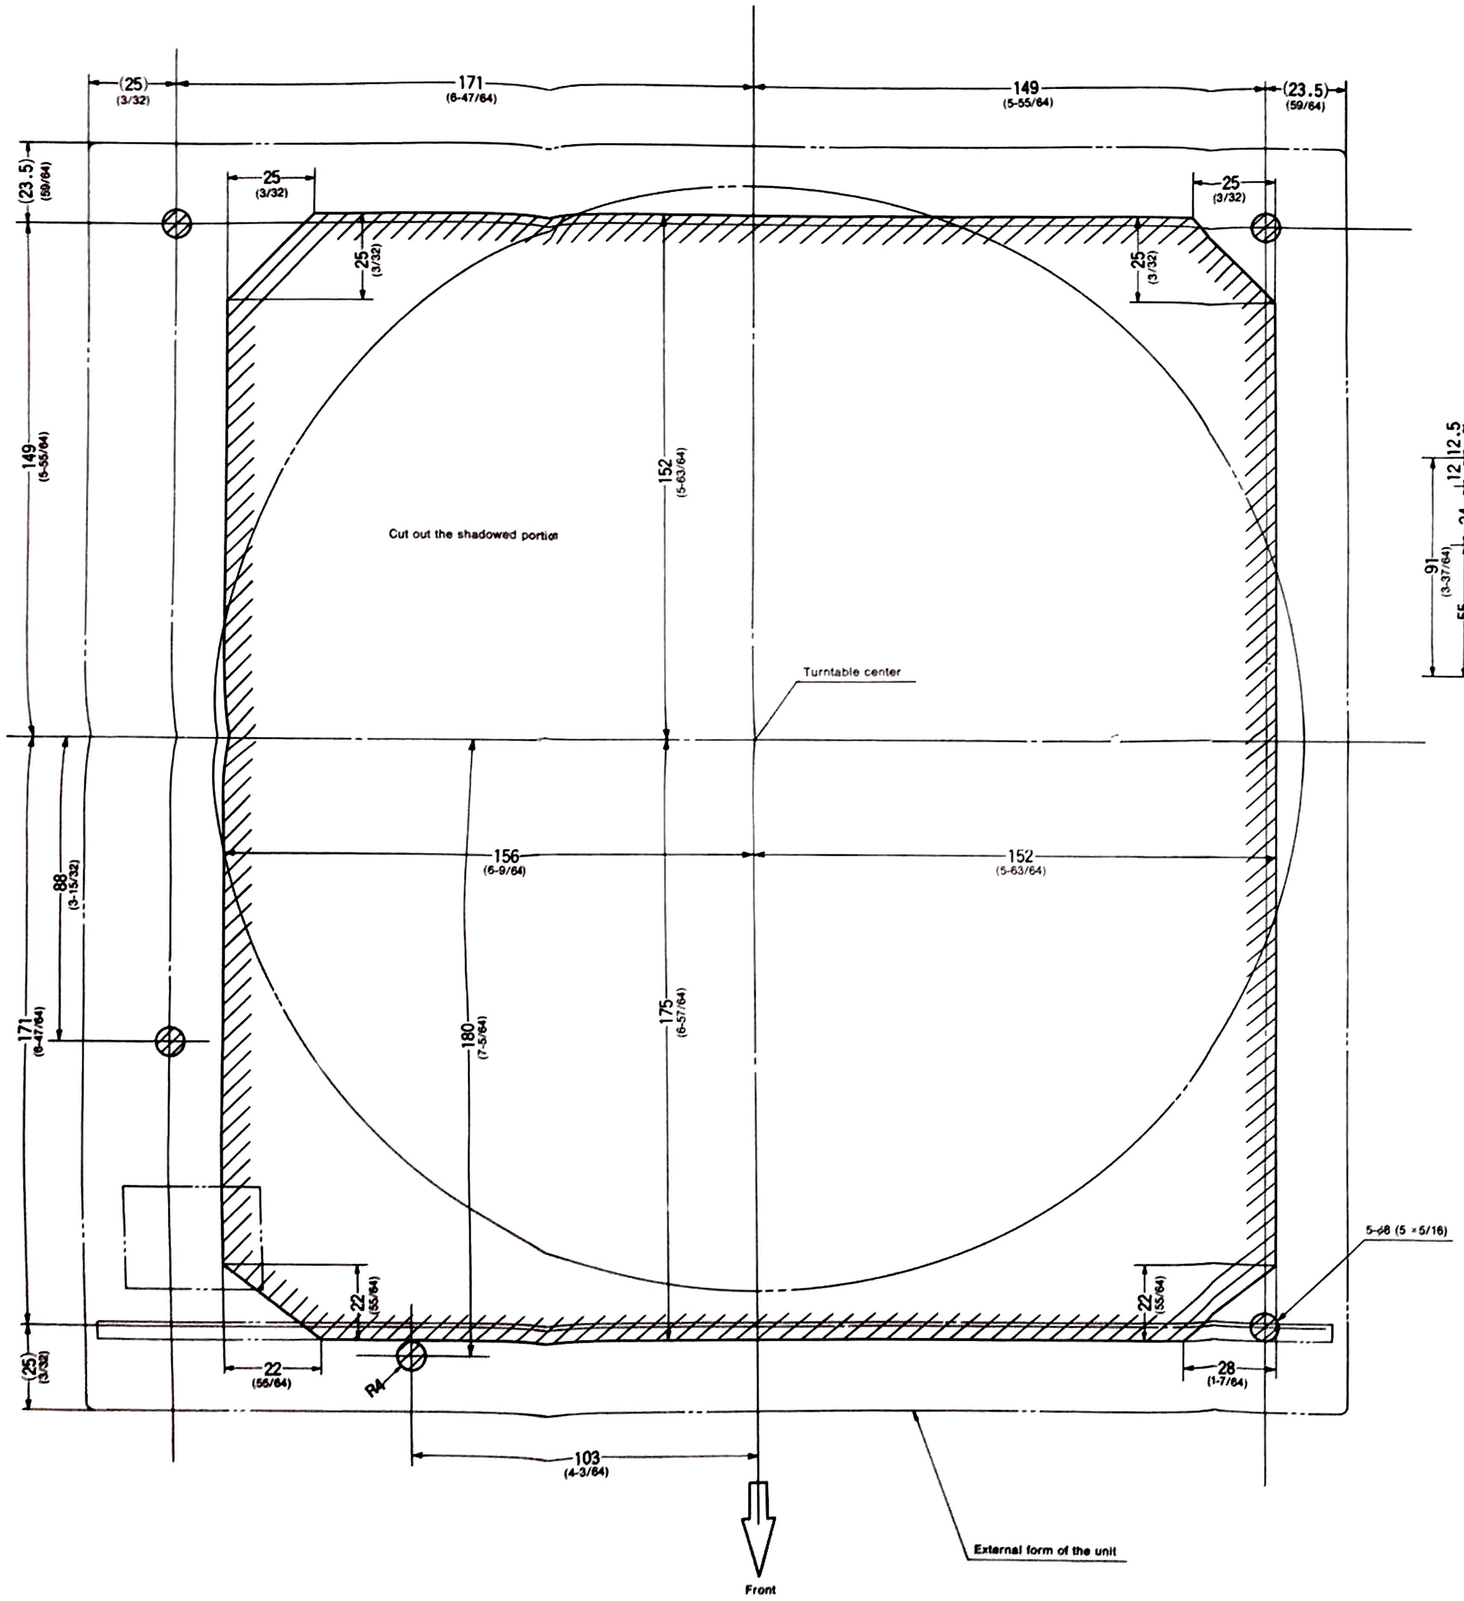
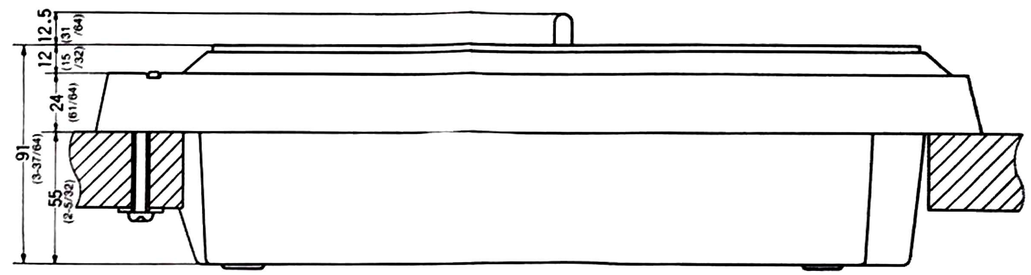
Installation diagram of the SP-10MKII 1/1mm (inch)





NOTES:

- The accessory screws to install the unit in a cabinet are designed for use with a cabinet board of 30 to 35 mm (1-11/64 to 1-3/8 inch) in thickness.
  For a cabinet board of different thickness, use screws suitable to that thickness. (The accessory screw is a meter screw with a nominal diameter of 5 mm (3/16 inch) and a pitch of 0.8 mm (1/32 inch).
- Use thick and heavy material for the cabinet in oder to bring out the best performance in the turntable.
  This installation diagram is drawn in 1/1 natural size, but the dimension may be incorrect because of a shear in printing and paper expansion and contraction, so use the figures described in the installation diagram for processing of a case and others.
