

# DiCoder® CKS36: Programmable Motor Feedback System for Installation in Electric Motors

In doing so, the system compensates for the eccentricity errors of the code disc, ball bearing and shaft, which are unavoidable in conventional systems.

By arranging the code disc in the centre of the rotational axis, high angular velocities are no longer limited by the code disc. The encoder size is essentially determined by the mechanical and electrical interfaces. Technologies such as "Chip On Board" are used to achieve this. The number of components is reduced to a minimum.

Incremental signals with resolutions of up to 2,048 lines per revolution and commutation signals of up to 32 pole pairs are available. A freely user-programmable version is also available.

	<b>Number of lines up to 2,048, 1-32 pole pairs</b>
<b>Motor Feedback Systems</b>	

**T**he CKS36 Encoder belongs to a new generation of optical encoders.

What they all have in common is the new mini-disc (MiDi) technology.

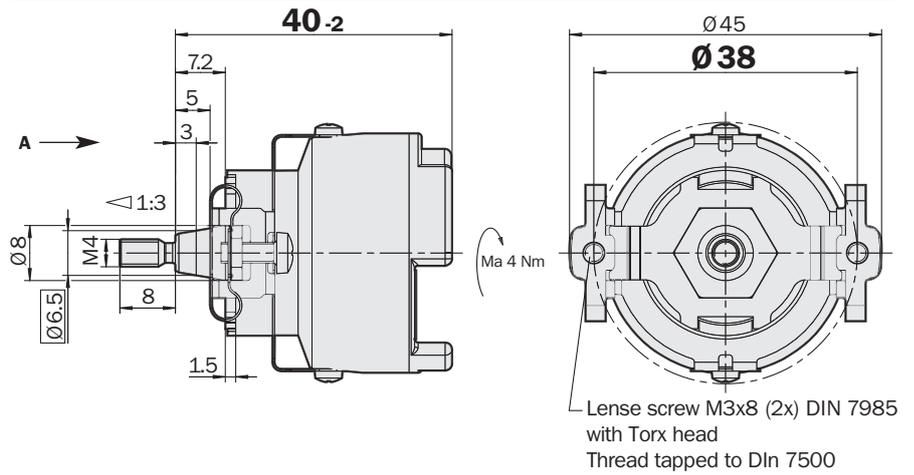

This generation has a special feature: a very small code disc with a code track radius of only 2 mm permitting holistic (integral) scanning and at the same time providing high shock and vibration resistance.

**Number of lines up to 2,048, 1-32 pole pairs**

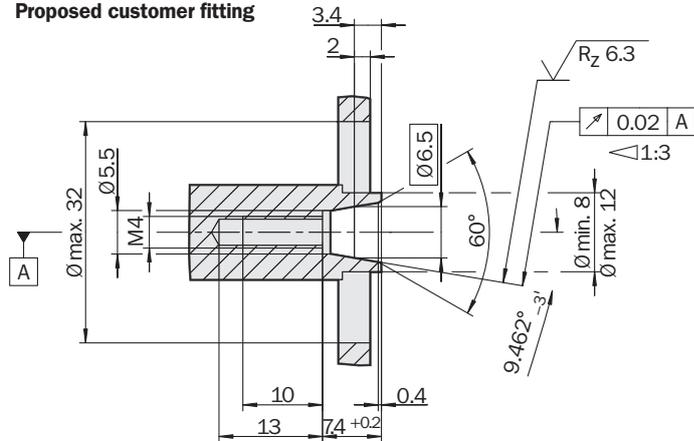

Motor Feedback Systems

- Resolution up to 2,048 Pulses per revolution
- Number of pole pairs: from 1 to 32
- Zero pulse 90° or 180°
- Working temperature range - 20°C to + 110 °C
- Programmable

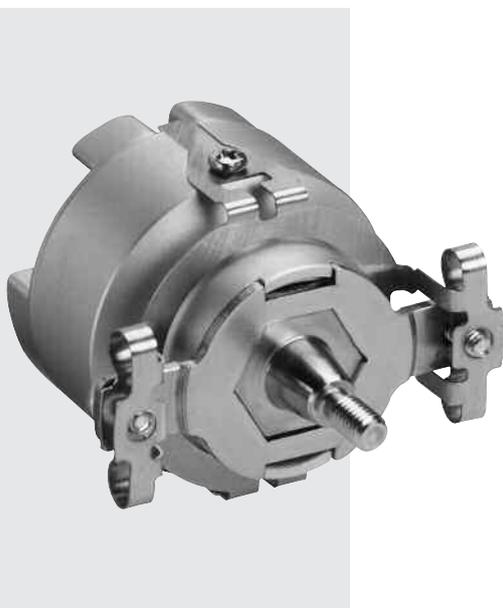

## Dimensional drawing CKS36

## Proposed customer fitting

General tolerances to DIN ISO 2768-mk

## PIN and core allocation

PIN	Signal	Colour of cores	Explanation
1	Z	violet	Reference signal
2	Z̄	yellow	Reference signal inverted
3	A	white	Incremental signal
4	Ā	brown	Incremental signal inverted
5	B	pink	Incremental signal
6	B̄	black	Incremental signal inverted
7	R	white/green	Commutation signal
8	R̄	white/pink	Commutation signal inverted
9	S	white/yellow	Commutation signal
10	S̄	white/blue	Commutation signal inverted
11	T	white/grey	Commutation signal
12	T̄	white/red	Commutation signal inverted
13	U <sub>s</sub>	red	Supply voltage 5 V ± 10%
14	GND	blue	Ground connection
15	U <sub>s</sub>	–	Sense + <sup>1)</sup>
16	GND	–	Sense – <sup>1)</sup>
17	N. C.	–	Not connected <sup>1)</sup>
18	SET	–	Signal input for zero adjustment <b>1</b> All output signals are adjusted to the position of the zero pulse. A level of > 2.5 V ≤ U <sub>s</sub> must be maintained for at least 220 μs in order to execute this function. <sup>1)</sup>
19	SDA	–	Data signal of the parameterisation interface <sup>1)</sup>
20	SCL	–	Clock pulse signal of the parameterisation interface <sup>1)</sup>

**1** Electrical zero adjustment

<sup>1)</sup> (not in stranded cable)

Caution: Pins labelled N. C. must not be occupied!

<sup>1)</sup> „Binary“ number of lines  
2<sup>n</sup>, n is a whole number

<sup>2)</sup> „Non binary“ number of lines  
2<sup>n</sup>, n is not a whole number

<sup>3)</sup> In the case of a higher speed, the output signals may be incorrect.

<sup>3.1)</sup> Self warming 1,1K/1000 min<sup>-1</sup>  
when applying, note working temperature range.

<sup>4)</sup> Without packaging

<sup>5)</sup> Condensation not permissible

<sup>6)</sup> To DIN EN 60068-2-27

<sup>7)</sup> To DIN EN 60068-2-6

<sup>8)</sup> With mating connector inserted and closed cover

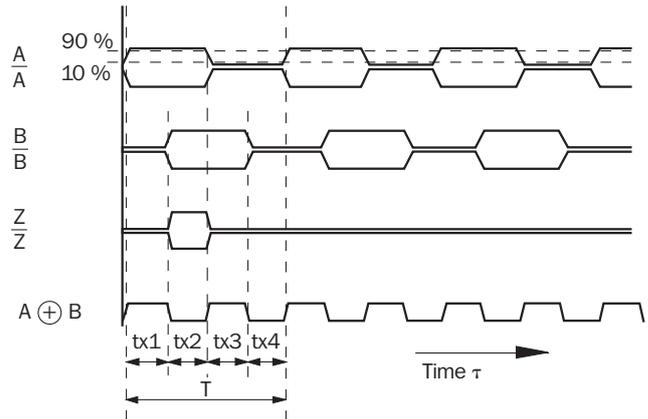

<sup>9)</sup> To DIN EN 61000-6-2 and DIN 61000-6-3

The EMC according to the standards quoted is achieved when the motor feedback system is mounted in an electrically conductive housing, which is connected to the central earthing point of the motor controller via a cable screen. This is also where the GND (0 V) connection of the supply voltage is linked to earth.

Users must perform their own tests when other screen designs are used.

## Incremental signals

At constant speed, looking at the input shaft, and clockwise rotation.

By linking the two signals A and B, an output signal is created whose cycle durations  $tx_1 \dots tx_4$  have different sizes.

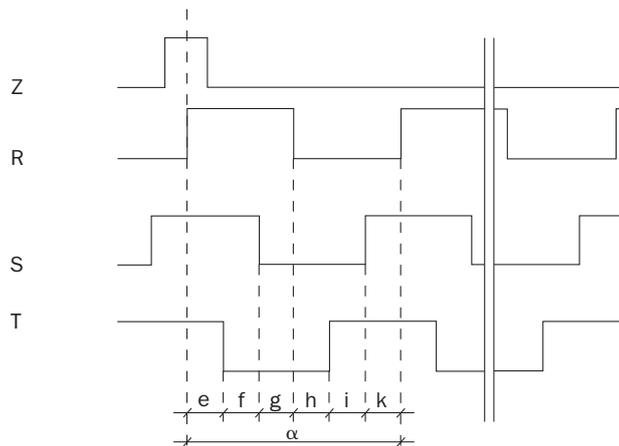

The differences are determined:

1. by the mark/space ratio tolerance of the individual channels

2. by the tolerance in the  $90^\circ$  phase shift between A and B
3. by the frequency

Ideally, the times  $tx_1 \dots tx_4$  should always be  $1/4$  of the cycle duration T.

## Pulse-time diagram

Pole pairs	Number of poles	e, f, g, h, i, k	$\alpha$
Example: 2	4	$30^\circ$	$180^\circ$
n	$n \cdot 2$	$360^\circ/6n$	$360^\circ/n$

$n = 1 \dots 32$

The angular data is related to a mechanical shaft rotation.

Precision of the signals R, S, T  $\pm 1^\circ$ .

## Programmable version of the CKS36 (type: CKS36-PFBPROGR; part no. 1035370)

This product option of the CKS36 can be freely programmed by the user. With the programming and adjustment tool (PGT-06-S), the following values can be individually programmed.

	Adjustable values	Default settings
Zero puls width	$90^\circ$ or $180^\circ$	$90^\circ$
Number of pole pairs	1 to 32	32
Number of lines	1 to 2,048	2,048

### Caution!

In the case of CKS36 ordered with fixed defined values (e. g.  $90^\circ$  zero pulse width,

1,024 lines, 4 pole pairs), these parameters can not be modified.
