AEROMOBILE NEW ORBITAL EXTENSIONS 2

Table of contents:

Magic quantum.....	4
Progress in computer logic.....	5
New nature conversations.....	7
Electronic scheming.....	8
What is new crystal effect.....	8
Plasma magnetization.....	10
Neurons CNN activation.....	11
Ion pump-neurons activation energy.....	11
Neurons net cube.....	12
Proton pump.....	12
Ionization.....	12
New receiver and scheming continue.....	13
Aero prototype modeling.....	14
Membrane.....	14
Perception window again.....	15
New reaction.....	15
Universal networks in progress.....	15
Impulse generator.....	16
Warmth and magnetization.....	16
Activation energy (magnetization), phase shift and connectivity.....	16
New wave estimation (quantum effect formula).....	17
Inter-membrane space.....	17
Electrodynamics.....	17
System with degree parameters (Dynamo).....	18
Electromagnetic acoustic, optic phonon, warmth radiation scheming.....	18
Transformation principle.....	18
About networks in common.....	19
Energy.....	19
Errors on earliest phase (A.N.O.X-I research).....	19
New mechanics.....	19
New assumptions.....	20
Current progress.....	20
Fields, potentials.....	20
New suspension.....	21
Tables and gadgets.....	21
Neurons network progress.....	21
New kernel level reactions.....	22
Neurons progress.....	22

Atoms and electrons.....	22
Magnetic field and frame.....	23
Scheming 2.....	23
Acoustic-electronic effect.....	23
New flight.....	24
Additional forces.....	24
New solitonic memory.....	24
Perception windows table.....	24
Debi fields and action.....	24
Ionization energy. Holes and barriers.....	25
De Broglie waves tasks.....	25
Atoms radiuses and charges.....	25
Progress in neuron cells.....	25
Thermal capacity analysis.....	26
Fermentative catalysis.....	26
New effects achievements.....	27
Classic and mechanic approach.....	27
Biosynthesis.....	27
Compound group shift.....	27
Efficiency conversion.....	28
Reliability and neuron networks.....	28
Electron concentration gradient (pn-junction).....	28
Sound and light lines for transmitter-receiver with quantum oscillator.....	29
PN-junction in depth.....	29
Diffusion.....	29
Neurons activity.....	30
Science directions.....	30
Physics experiment.....	30
Nets.....	31
Interesting analogy.....	31
Triggers & relays.....	32
New pendulum.....	32
Modus, modes and classification.....	32
Programming perception.....	33
Artificial intellect, regeneration and perceptron questions.....	33
Future formulas corrections.....	33
Interesting analogies.....	33
Quantum mechanics surprises.....	34
Theories in depth.....	34
Impulse and pendulum inertia.....	34
Magic 3/7 formula XXVI.....	35
What new networks can do and what is new effect.....	35
New networks programming interpretation.....	35
Intensity and activation (ANOX-I VII and VIII formulas in approximation).....	36
Activation pro-function.....	36
Sodium, potassium currents.....	37
Neurocomputers.....	37
Charges, radiuses and masses in statics.....	37

Synthesis scheme paradox.....	37
Regenerative therapy.....	38
Muscles tonus, reobasis, chronoxia.....	38
Forces in plasma, environment.....	38
New paradox.....	38
Bio-form news.....	39
Fantastic light.....	39
Kernel interpretation II.....	39
Two ways of potentiation.....	40
Three neurons memory.....	40
Scheme analysis, load, currents, modulation.....	40
All with membrane.....	40
In principle.....	41
Full cycle.....	41
Sinc.....	41
Impulse and magnetic moments.....	41
New inputs and outputs, digital signals.....	41
Microchip scheming and parameters.....	42
Mechanics, quantum, mechanism, new scheme.....	42
Transistor in new scheme.....	42
Further progress in scheme logic, energetic functional correction.....	43
Synopsis weights.....	43
Activation energy correction, digital line.....	43
Modes, microcontrollers, scheming.....	44
Scheming further, project product.....	44
Lost chapter.....	44
Oxygen-hydrogen junction (ionization) draw forces corrections.....	45
Electromagnetic, phonon, warmth radiation transceiver-converter scheming.....	46
La Grange point.....	46
Ping-pong reactor.....	46
Progress in neurons networks.....	47
Ion-sound plasma.....	47
Tokamak.....	47
Impulse pumping.....	47
Plasma energy absorption.....	48
Mass flow. Old records.....	48
Hypersphere model and cosmic ferric sulphide.....	48
Quadruples.....	48
Alternative physical principles.....	49
Barycenter, forces, new model draw.....	49
Progress in scheming.....	49
Magic in 3/7 (formula XXVI, page 48).....	49
New gravity terms.....	50
Light, sound wavelength, energy.....	50
Ice on Moon and Mars.....	50
A chance to current calculations.....	50
Gravity well.....	51

New progress in computer logic.....	51
Scheming progress in continue.....	51
Free energy.....	51
Programming ions channels.....	52
Neurons networks further.....	52
Physical networks.....	52
ANNs CNNs and new results in bio-chemistry.....	52
Atoms current model, rotation and magnetic forces.....	53
Finally solenoid entity.....	53
Receiver antenna, current, voltage other characteristics.....	53
Audio dynamics, membranes and coil.....	53
Different systems.....	54
Delta.....	54
Junction formula.....	54
Cascades. New analogy.....	55
Chemiosmotic coupling.....	55
Bio-cells new tunnel. Cascade calcium receptors activation.....	55
Software-hardware complex innovation.....	55
Energy transformations in electronic transport network.....	56
Reactions questions. Model, scheme, synthesis.....	56
Reactions energies.....	56
Ohmic resistance.....	56
Regeneration progress.....	57
Synthesis, cells juice, absorption.....	57
DNA reparation energy, fight against apoptosis.....	57
Final inferences. Connectivity.....	57
Bibliography.....	58

MAGIC QUANTUM

What weather is it today and there are we? Here are questions we should ask ourselves. Third beginning is the most difficult. You need to explain the things, which you know and you don't need to explain. Paradoxes are the theory explorations. We have electron acceleration maneuver with complex barrier. Phonon activations are two equilibrium distributions and Boltzmann kinetic dynamics. Sports are still interesting and music power with harmony is still original. 2-nd book is on sale. Life is coming to next spiral or spring lap. Current flow, gas is quantum particles assembly. So we archive line dynamics with several systems. Inductive inference machine is new language phrases. Economics in crisis, people economic are products. Balance in progress, constants – new measurements. Tomatoes holyday in Spain was some weeks ago. Kids are skating on short lifetime ice. We've found hyper sound. It is quantum with terahertz spectrum. Desktops are still in offices and they are asking for some maintenance. Laptops are not so fast but useful in flat space. Gravity is strong and effect is in power.

Earth field with moon give's trivial strange attractor model that useful in dynamics and cosmic vision. Space maneuver gives acceleration and full energy equilibrium. It is New Year present with kid in family and mind in family round. Maybe it is time to think again about Perpetua mobile. In analysis we have add several factors and new parameters with energetic equilibrium. Space returns effect with new nature and minerals. May be it's time to look at ...thought drizzle. We are building the magnetic quantum gas with effect in dimension cycles and spirals as like our electric universe. Cube is nice move with vacuum semi-conductor. It gives new power with parameters and balanced load. We can look into the skies and find new constellation. Aero-transport is now probing the pressure. Antenna is solar panels voltage with control. Next stage is new wheels prototype and construction building.

Sadness can be the life page and the idea that is new composition or new light with flower regeneration. We coming to New Year than everything are moving on and become bustle. People looking souvenirs for family members and waiting like clock at 31 of December give time new lap with luck or faith and thinking soul. Enemies will try to convince you in weakness and disability but you will struggle with them and will try to catch a moment.

PROGRESS IN COMPUTER LOGIC

We result in trigger enable-disable sun control memory transformation with registry check and junctions. These storing data with new management method and allow signals value monitoring.

So, now we can pump mechanism with energy of appropriate type and keep it moving in needed direction or keep it functional in its normal behavior. This pumping is quasi-impulse, for example, phonon based and has mass. It charge structure and manage capacities. In other words, it's electronic future. Also we can charge aero-prototype to its flying potential and orbital position acceleration. That are interesting is energy level in quantum and internal reactors capacities recharge for further action and dynamics. Calculating pulse we can get quantum efficiency and activation – turning. Activation change elasticity although pumping tune magnetic activity and drop neurotransmitter that transmit electric signals between neurons in human body. Also, pulse generates effect in photon flow.

With product supervision we can charge internal energy stations with food value and generate reserve energy for muscle activity for example. Also as every object has it electro-magnetic field we can measure it and transform in electricity for load balancing and scheme functionality. Load will keep functional and manage devices.

Soon we will analyze wave shapes for different complex wave functions and understand how it can amplify signals and give positive results in phonon gas model. This also can work with plasma or other type gas with statistics. That charge internal reactor energy capacities and control magnetic type reactions which generate electric energy and make electronic networks functional with a new quality, which produce cold and warmth, manage mechanisms which help humans to update live quality.

Also we plan to build some analogies with string theory that as we think make several corrections and new ideas in prototype construction progress.

So gear has two bases with springs or suspensions. We can calculate masses with new equation and charge balance. In atoms model we've resulted in atom mass-stretch equilibrium that in universal terms equalize oscillators of different type. This can even be bridge or router gear what transform frequencies and appropriately masses in oscillators. Bridge can manage different signals type and give voltage with current to load with balancing. In architecture terms we can connect bridges in more complex structures with complex objects: roads, tunnels, aero-ports, islands and part of the land on globe. This will give light, water, every load that we can imagine. These are new balance and load impulse that regenerate energy and charge capacities. This can effect in sports, music, science, finance, networks, architecture, ethics, philosophy, literature and information theory.

Driving across the galaxy, looking new Earth we explore new worlds we have in our universe. Connection lost, try to regenerate and recharge.

Thus we've result in wave shapes and able to analyze phase with parameters. New core will have induction and internal currents. Core example can be regenerated in computers infrastructure and implemented in nature environment.

Winter gives place for spring breath and new warm wind from West, days become longer and sun with his crown fill trees with warmth and new juices. Lemon tea is for taste and for mind state feeling positive moments that are on new wings of an angel. Spiritual feeling that is even in Antarctica and Africa. Summer is returning from sleeping forests and fields that are fog inside and river flow. Waves and tones with harmony build air streams that are songs in our eyes and souls. It can be just a picture in your aero-mobile front or back window and Earth side in millions of fields and forests. Words come inside texts and worlds, with water and heaven. Fortune is on its round and magic is in proto-matter and space. Light is between darkness and infinity. Spiritual world inside us and spirals life force runs fast to rain wall. Electrons fill channel and run further to chains of mountains and strong old century trees. It's our home – Earth that we have to keep and care. We writing new story to fill emptiness inside and discover new power that effects in new architecture and constructions.

New season comes; sun will be more active and shiny. Rivers will be full of water till coasts and mountains. Structure charge is new question for discussion. New nanostructure is progress in this work and prototype facility for future construction. Game is a way to rest for some time and fill freedom. New information space introduced and new energy was set on a new level.

With activation energy we can calculate and explain elastic forces in connected oscillators. Also we can calculate magnetic fields or spring extensions in any type oscillator contours. It explains binding conditions in different nodes or node mechanisms. For example we can archive equilibrium in bases where springs montaged and create anti-hit mechanism, which stabilize external forces – mechanism interaction. We should say that it also applicable in current strong mechanisms.

Now we are working with junction. It provides new vision or point of view. We result in equilibrium-non-equilibrium junction dynamics and soon will have complete picture of such physic-electronics phenomenon. Aero-prototype is on elastic element cognition stage. Reactors are stopped in Japan, regeneration is on cognition too. We've come to oscillators binding in quantum and classical form. It helps to connect things of different nature like inertial gas and metal. Also, we finally find truth table physical nature. It is phonons or elastic wave in classical approach. This gives another type of some phenomenon determination. It will allow innovations with new theory, space and effects.

So we transit to junction which is now bi-polar (field) transistor device with activation and each junction interaction. Method is in principle and on a new level it gives injection coefficient in mentioned device. Each activation energy portion, for electron and for hole, is injection progress in junction and recombination source in non-ray recombination which is phonon quantum with energy. Thus we have junction flow and current in junction with appropriate level. Game will began soon with new light and new electronic devices in theory or more complex schemes with new principles and equilibrium states. Energies have shift and attraction with strong field and Lorenz with elasticity's forces rotation. Activation energy is low level and has concrete values in scientific model. We find out that electron and holes elasticity are related with atoms fields and have mobility as free particles. Model has impact in automobile injection and electronic spheres. It updates with hyper sound energy which will be the source of further exploration. We think that its manageable junction activation with particles junction through the barrier or key activation in complex scheming. It's related with hi-frequency waves which are new field for discovery.

ELECTRONIC SCHEEMING

Analyzing several electronic devices we should result in new scheme with transmission or transformation function and digital management scheme which are controller's program field and main function ability. Progress should give filters and generators progress in thought progress and thinking. Musical device can be another application of information theory. Electronics is not just oscillators, resonators and schemes it is also principle of survival and damage recovery. Sun light can be analyzed with junction progress and injection in principle. Giant planets are the field of galaxy research and new phenomena discoveries. We are working with several hypothesis and legends, matter and space tissue. New mechanics is not just new model it is new vision and way of thinking, new life understanding and philosophy.

Now we can enable or disable field transistor with voltage value. It helps to discuss this device as key that help to understand it in reality. Soon new scheming will progress with current calculations and new draw as it is new vision in object terms. In hypothesis we have junction characteristic and quantum existence in quadrant. Now it has near sense in complex assumption. It is electron impulse dynamics state, which can be in appropriate quadrant on characteristic diagram. And it can be particle with non-linear dynamics. Taking into account that it is manageable mechanism it can be used like key that open junctions or manage other electronic mechanisms to active state.

Also we should understand new holes endothermic reaction which as we think is amplifying moment that should be cleared. This is energetic junction question, which is flow metrics and hyper-sound recombination energy level. If previously we talking about jump through the barrier, now we talking about injection and non-ray recombination which is current too. So junction is activation energy transport and as we think mathematics oscillators that we can see in resonators, filters and different RLC circuits. Energy release is junction cold progress and self-protection from damage. Soon we will be deeply in recombination to understand currents and processes in junction charge space. It may be new radio or similar like device. It can be useful in computer logic and networks building or rebuilding progress. In composition with soliton it is new biological system or machine if you want.

THAT IS NEW CRYSTALL EFFECT

New century gives more power and more field for assumptions and hypothesis creation. Book becomes not just a piece of paper; it becomes real manuscript and research line member. In classical terms we have strong dissipation or dispersion with energy transport and facilities management. New intellect becomes not just new IQ, it becomes new conceptions line with strong or weak currents and

standard accumulation or regeneration. Lights are bright and it can be seen from space and planes like universal net.

So we've result in ionization. From quantum point of view it is light-electron interaction that gives electron power to overcome core attraction. It is a question of internal homeostatic mitochondrial reactor.

At this time we have atom crystal cell oscillation modes table with wave function and binary code for each atom state. Also we have a breakthrough in energy estimation we've calculated phonon gas or elastic waves in classical point of view. Each excitation is acoustic wave. Two waves junction system is acoustic waves system with parameters and appropriate mechanics. All tables are octave spectrum with phonon energy which has energy for electrons to hop. Each hop is junction and as evident electron current. Soon we will get phonon gas estimations and Bose-Einstein statistics. Also we will progress in warmth/sound shockproof mechanism which effect crystal cell which nodes are connected with springs. That will be new solid vision and mechanism. The warmth/sound shockproof is kinetic energy – shock ionization energy difference which mathematically can be represented with in inequality.

Atoms forms molecules, so junction is a chemical reaction as we know and it should be overviewed with chemical potentials. Atoms oscillations are harmonic waves with points-springs structure. Junction is different energy states junction with energy activation and transparency coefficient. Hopes conductivity is new theme for analysis and further research progress. Activation applied in energy stations energy pumping. Activation is a question of phonon gas modeling with electrical impulse physical net junctions. It is the question of new bio-technology which is on creation stage. Energy stations repair progress is chemical reaction progress or regeneration in other words.

The interesting question also is tunneling progress which manages conductivity in semi-conductors. It is energy zone processes and hop length moments, it is activation and diffusion. It seems we are in undiscoverable region researching new effect with energy production. We have calculated hop energy for barrier tunneling. This will give new effects in scheming.

In continue of book we should say about several mistakes, first is modes that are non-linear oscillation modes with hyper-sound spectrum. Modes are octaves in musical terms and energy is elastic wave with energy transfer. Mechanical terms this is energy quantum with energy other type transformation. Also this energy activate CNN while mass absorption. Charging energy station it performs in CNN memory read/write and synchronization progress. Read/write is computer registry connection analogy in controllers with network translation via oscillator module. Physically it is modulation with hyper-sound carrier. In programming it is north bridge functions with transistors actions in memory-network module connection. It can be updated with scheming and several draws.

In network modules analysis (oscillations contours) we've result in phase balancing and amplitude balancing equations. Also we can build phase wave function for phase changes and phonon quantum analysis in quadrants according to hypothesis. Antigravity effect should be progressed in

several months. Now we can analyze with entropy and capacity metrics, and have a possibility to parameter electrons in schemes. These should effect in reliability and networks regeneration progress.

Planning exosphere prototype we should return to reactors base principles and bosons physics which give appropriate picture in theory and make a concept construction more clear. As you remember sky sphere represented here as Ryman sphere model. So, all calculations can be done with Ryman sphere.

Building phase shapes we can analyze speed characteristics with coordinate progress. It's mean wave behavior in different points or trace. Also it represents energy release progress in hyperspace environment. New mechanical system gives wave's intensity analysis new different angular frequency oscillator's synchronization. Ryman geometry gives equilibrium sky spheres new magnetic attractors model with potential barrier electron hops. It is crystal cells with Lorentz-quasi-elastic forces correlations.

PLASMA MAGNETIZATION

An interesting moment is that air and human plasma is elastic environment, thus elastic waves can be transformed with ears into charging plasma and CNN electric signals. So magnetization current can charge plasma and generate signals in brain and CNN, thus managing internal bionic environment. Also this magnetization progress is Lorenz force vector rotation, and magnetic attractor and electron orbit change. In some cases it means that plasma should attract Matter that synthesized in internal space.

Now we can say that we result in new reaction with activation energy and entropy. This gives reactions acceleration in plasma with small energy values and moves chemical equilibrium in product side. Reactions related with temperature, concentration, time and mass flows. It is possible new CNN prototype with new synapse signals transmission and plasma new equilibrium state creation. In this state all atoms formed in structure with electrons flying around induction direction and thus we can talk about plasma with non-interaction particles. This state has elastic force direction and attraction new center.

Also we can talk about ATF synthesis reaction and regeneration reaction which gives new power to the muscle system and distribute impulses in ion channels. So, bosons give additional kinetic energy for reaction and mitochondrial stations charge progress, which allow synthesis. Also it related with action potentials in CNN and new kinetic balance with Boltzmann kinetic equation.

Solitons in plasma has interesting nature and biologic effect. This could be magnetization progress with elasticity change. Electron spiral laps changes is also magnetization progress with equilibrium result. New formulas give interesting activation dependencies in reactions speed and progress.

NEURONS CNN ACTIVATION

Now we have a deal with CNN activation with elastic waves. Its soliton transformation may become an interesting synchronic progress with magnetic therapy effect. Function is classical and neurons activation is new CNN prototype formation. These networks can be digital signals model with topology and capacity charge progress. It gives new life for synthesis and reactions new balance.

CNN prototype is project model with learning weights and appropriate amount of layers. In synchronic mode we have got dynamic attractor which is physical junction gas-plasma state. This net should recognize images with perceptron logic and become an equilibrium end system state. So we have come to new neurons computer with ANN prototype.

Also we have net energy for analysis and weights set learning algorithm creation. Activation energy should manage chemical reactions in CNN and thus activate bio-levels. Output binary image is ANN work result with binary image as input. So we can speak about soliton memory based on transmembrane capacities like DRAM computer memory. Also it is an organic cells ion exchange mechanism which is $K^+ - Na^+$ membrane channels flows. Managing channels with ATF synthesis energy help in biochemical impulse generation is a way of memory synchronization and new energy and matter creation. Amplifying flows gives membrane potential gradient change – saturation, thus providing dynamical equilibrium, as progress with external magnetic field.

ION PUMP-NEURONS ACTIVATION ENERGY

$$E_a = \frac{RT * \ln(\xi)}{\Delta Cn * S * \lambda} \quad (I)$$

E_a - Pumps activation energy;

T – Absolute temperature;

λ – Ion channel wavelength;

ξ – [Quantum] efficiency;

S – Electron cross-section;

ΔCn – Particle concentration difference (molecule, atom, ion, electron),

there $\xi = P_{in}/P_{out} = C_{in}/C_{out}$

in/out – is membrane signal cascade channel in and out for electrons or ions.

Now we know that neurons are oscillators like atoms and electrons. Also they are truth table strings and thus functions witch synchronize neurons networks in neurons populations. Neurons have

perception and impulse which can be generated with the help of ion pumps. Neurons synchronize groups on far distances, thus making networks unique. New formulas and graphics should clear some chaos in synchrony methods, explaining relations. Networks can be modulated with special signal and be synchronized on molecules level or agreed like oscillators providing connectivity in couples, quadric or even octal or more group member's quantity. Also we should remember that networks can be active in asynchronous mode creating memory and everyday activity.

NEURONS NET CUBE

Impulse exchange in networks is a way to impact on connectivity and energy distribution in biologic cells. Several reactions can be updated with activation effecting reactions speed and reaction products.

PROTON PUMP

Glycolysis progress gives protons for future ATF synthesis and thus support energy and signals for muscles reaction and muscles tonus. Also it gives energy for enzymes synthesis and ions and enzymes transport.

IONIZATION

As we find out phonons, or elastic waves, could provide ionization in cells and membranes with vihrons and solitons. It related with magnetic mono fields. These flows accumulate power in cells and produce water and old materials clearance, also providing ATF synthesis. Ions diffuse through membrane and create metabolism, which delete insoluble materials through reins. Concentrations provide electrical impulse generation method with external magnetic field or chemical method without it.

$$\Omega_2 = \Omega_1 * \left(\frac{p_1}{p_2}\right)^{Na*v} \quad (II)$$

Impulse count related with protoplasm pressure difference there:

Ω - Impulse amount;

P – Plasma pressure in Axon channel [dendrite, terminal, matrix];

Na – Avogadro constant.

Both electronic and chemical methods are metabolism on cells level. Impulse current is a spike in activation energy.

So we have come to thermo-nuclear ATF synthesis reaction with neurons impulse count sum as a reaction activation signal. Ions exchange mechanisms in cells function through synthesis energy and protons allow reaction progress. Now it is possible to calculate ions current in pumps and understand it magnetic field which has torus geometry. Also we have to remember that high temperatures affect proteins, thus we should understand that activation energy is energy with temperature limits.

Membrane currents and potentials become analogical to Hodgkin-Huxley model with several inputs in neuron and one output. Soon we will calculate magnetic field impact to current channels values and its energy. But now we can say that it has capacities and voltages.

Now we know that we can measure amperage of sodium and in the way of ions relation potassium amperage. Also it is possible to calculate magnetic field strength and element concentration in flow.

Ionization is plasma function that creates network with currents. Activation energy formula creates new relation between energy and entropy (enthalpy) with potential barrier.

NEW RECEIVER AND SCHEEMING CONTINUE

Principal model of new flying prototype updated with inductive sensor similar scheme that measure sun activity, temperature, pressure, time, and other telemetry data. This data should be saved in memory and synchronized. Special application will handle parameters and generate signal for transmitter. This scheme should be useful in prototype climate control systems.

AERO-PROTOTYPE MODELING

So engines give power to new machine, which can fly on appropriate height and should measure external parameters. Synthesis reaction support force and acceleration for prototype that climbing skies. Fuel is atomic type and the force is air-pressure force with field like plane which has powerful motion. Onboard systems including positioning system manage position, make a course and accumulate sun activity power transforming energy in onboard stations electricity.

Now we have a new sensor scheme draw which measure photon and phonon flows which can be absorbed by electrons. Both quanta are pressure that can be measured. This provides noise analysis and visible light analysis, which help in driving of flying progress. Scheme program handle signals and transform it in visual and sound information.

MEMBRANA

Membrane oscillation is the way quantum pressure effects molecules and particles attraction. Soon we will understand how soliton impulse affects potential-depended ion channels and that is cell exchange mechanism and reactions. Impulse is new equation with energy integral and different solutions. It could distribute energy and accumulate free energy in internal stations. Energy gives rapidity to reactions and save charges. Ion transport provides normal exchange and life functions in mitochondrial inter membrane space channel systems. Equation is density and flow frequency in channels. This effect exchange mechanics and thought activity.

So we find that all in mitochondrial energy stations and ions transport is active with wave and warmth. Acceptor centers are providing ionization with potential jump. Reaction results in positive charged ion. Wave functions are also ion wave functions and new system states. Ion liquid transport molecules and provide internal exchange with energy accumulation. ATF reserve helps in restoration reactions. Ion liquid pressure in points can be calculated and synchronized with wave impulse.

Now we can talk about glycolysis and ATF synthesis which are main reactions in accumulation progress. Inter membrane space provides new metabolism and ATF channels exchange in cells. Stations can regenerate with quantum transformation. Pulse can regenerate also and make efficiency with probability thus making electron transport. Magnetization provides membrane capacity level changes. Spikes are able to move in different directions synchronizing distant nodes and effect mitochondrial molecules motor. Protons channels are also active and support space potential. New cycles are in cognition.

In analogy audio dynamics have EMF, traction force and capacity with field and pressure which being transformed provide reactions on a new level.

PERCEPTION WINDOW AGAIN

Understanding new philosophy we go deep in codes and abilities, properties, constructions and patterns. It should effect mentality and create wave system which is equations system and open system on a physical level.

Working with truth table we have understand that each string can be a neuron with hyperbolic function and perception code, each function is a pulse flow with pressure and pulse amount also well-known as axon flow with current and resistance. Reaction or pulse do somas metabolism in channels providing groups population synchrony and somas breathe.

NEW REACTION

Returning to the tables with levels we've come to ionization energy understanding and new ions compounds creation. This forms new crystals with small activation energy and fast ionization. Main draw in first book can now simultaneously be represented as electron new atom conjunction and ion new structure, or molecule building. Magnetization of atom provides electron acceleration with new orbital magnetic moment and new external magnetic field value. Also taking to information that each string in the table is nerve knot we should analyze phase synchronization level progress with signals that are able to transform to running wave model with Fourier transformation.

This affects metabolism rapidity and static ion potentials electric forces action. Also we've result in interesting analogy with molecules motors in cells and electron tunneling. Motor generate power for reactions and help in ATF synthesis.

UNIVERSAL NETWORKS IN PROGRESS

Understanding that CNN is network with more than million neurons and each has more than 100000 connection, input tree has signals with level and weight which have dynamics in time and binary or other type image on output tree, we can say about complexity and new neurons processors that can be nodes in networks with activation from silence state function. This scheming can generate electric impulse which supports synchronization progress. It is new step in neurons computing development. These networks are stable with Lyapunov exponent criteria.

IMPULSE GENERATOR

Now we can calculate impulse value, wave vector and action with phase.

WARMTH AND MAGNETIZATION

It is interesting; we have deal with warmth and magnetization progress. Each new question becomes new tree in the theory. Effect appears in music sphere and becomes just guitar band or pitch shift effect. These will be new line or new isothermal quantum junction. It can be original in music sphere and circuit magnetization that make more capacity and current. Studios are waiting new effects, which come month to month. Quartos, fifths, octaves make intervals and activation with synthesis and regeneration reactions.

ACTIVATION ENERGY (MAGNETIZATION), PHASE SHIFT AND CONNECTIVITY

$$Ea = m\Lambda * Qz * \eta * I^2 * R/v$$

(III)

Ea – Reaction activation energy;

m – Freedom degree;

Λ – Magnetic conductivity;

Qz – Phase shift;

η – Connectivity;

I – Current;

R – Impedance;

v- Substance amount.

This is magnetization progress energy, which changes crystal structure creating additional channels for electrons and ions or membrane magnetization. For example it affects oxygen.

Molecules rotation for constant phase gives concrete ATF results in cell and complexes connection.

NEW WAVE ESTIMATION (QUANTUM EFFECT FORMULA)

New wave analysis in assumption is wave pulse with pulse amount, zero frequency, freedom degree and impulses time in, for example, sound field.

INTERMEMBRANE SPACE

Exploring energy stations with electronic perception we have come to new ion pumping mechanics with electron new ion core attraction and oxidizing reducing reaction system which manage breathing circuit in live cells. This can also be called like ATF synthesis which produce concrete amount of molecules or oscillators in moles. This means pumping transfer ions to matrix and help in activation of water generation reaction. An interesting question now is hydrogen atom appearance in inter-membrane space, reactions phases and common effect. Also we have come to new ion cube which combine atoms electric Debi sphere fields and activate appropriate reactions.

A lot of water now is reacted near the matrix. Travelling to sea we've understand how warm air react on internal water balance and how it is bringing closer to dehydration. This cycle is quality in metabolism progress. Reaction is new thought and enzyme breath circuit that updates breathe quality in homeostatic machine.

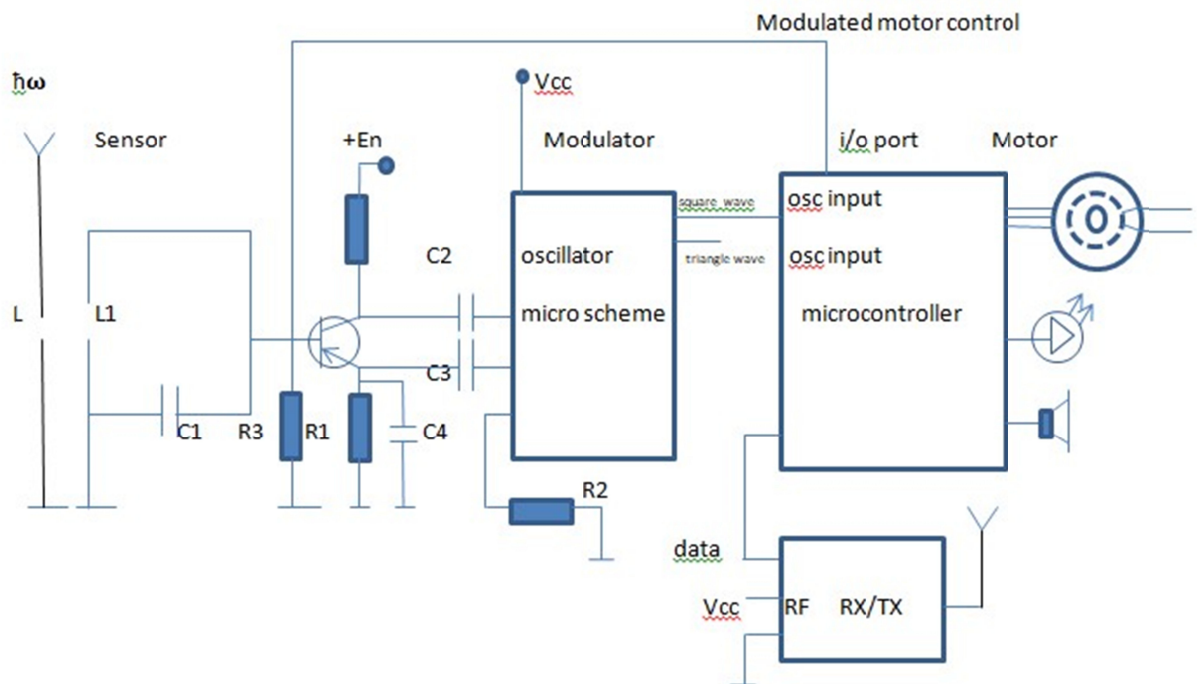

ELECTRODYNAMICS

So we've hit in charge system is dynamic system and new pendulums system is equations system with elastic coefficient as angular frequency function. It is electron acceleration in plasma with forces and new field electron accepting with oscillation character changes. Quasi-elastic force provide electron equilibrium state with is zero mode in project table and Lorentz force provide acceleration or hope with field parameters changes and thus electron junction.

SYSTEM WITH DEGREE PARAMETERS (DYNAMO)

So we have to remember, that without electrical forces particles move with constant speed in straight direction. And if we have forces we have in case of electron particle effective mass, which explains particle motion.

ELECTROMAGNETIC ACOUSTIC, OPTIC PHONON, WARMTH RADIATION SCHEEMING

TRANSFORMATION PRINCIPLE

This scheme transforms sound-light flow to lamp or dynamic signal, for example, impulse, and allows manage transformation and flow intensity measurements. So we can say that we move terahertz spectrum to audible and visible spectrum. Antenna construction for this type of flows is different (acoustic antenna and light Nano antenna). It can be signalization module or transducer type device.

ABOUT NETWORKS IN COMMON

So, we have understood now, that we can load neurons networks or populations with microwave currents and measure these loads. This is synchronic progression and also new scheme creation progress that allows understand natural phenomenon and control oscillators in pairs that are charges systems with equations systems and magnetic field impact on it.

Junction is now tension field with tension lines forms change from linear to limitation cycle and back to linear form on a new level. We result in field source creation and unlimited energy source creation progress.

ENERGY

So we have new oscillator energy (charges and currents) with distribution and probability value. It is mode universal table or in another assumption neuron or electric charges and currents wave formulas. We've result in oscillators binding thus giving new understanding for activation. Modes probability has another (FERMI-DYRAC) distribution and intensity in classical terms.

ERRORS ON EARLIEST PHASE - A.N.O.X-I RESEARCH

So, we have say that we have analogies mistake in principle force in first research work. We take a coulomb force in the meaning of gravitation force and replace some moments with graviton and anti-graviton particles instead of charges in charge systems (dipoles, quadruples, octuplets and further charge systems). Thus electron moved from orbit, hydrogen and oxygen have inter-charge inter-force like coulomb forces between. Graviton induction in this case may become magnetic induction level related with ions electronic fields' viscosity (table data) and oscillator energy functions.

NEW MECHANICS

In principles we have ion radiuses new binding with radiuses pressing and stretching, which are core electrons suspensions. Quasi-elastic forces 180° rotation is new normal acceleration equations system change for electron orbit change. Other equation is tangential acceleration Lorentz force which in rotation gives electron jump. Two connected modes of oscillations in periodically changes as you can see gives approximately 90% of system faultless time and three modes gives approximately 98% of system faultless time with Maxwell distribution.
