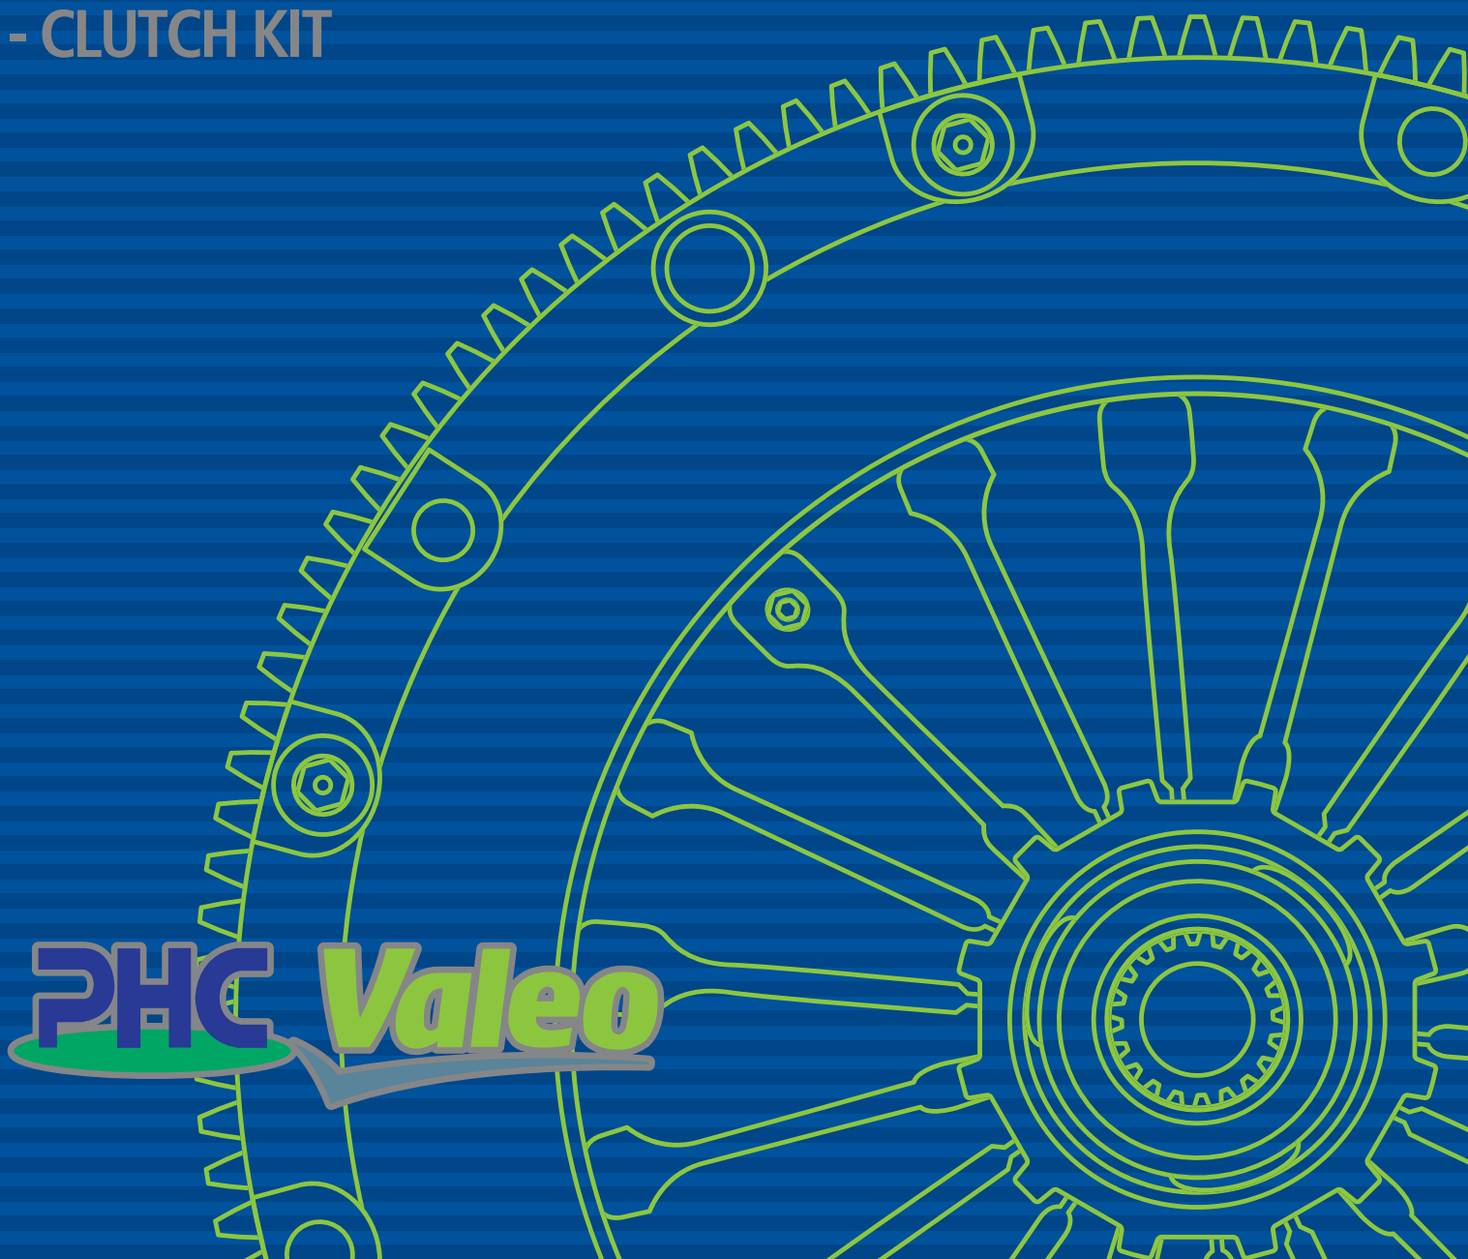
CLUTCH CATALOGUE 2016 2017

- CLUTCH COVER
- CLUTCH DISC
- CLUTCH FACING
- RELEASE BEARING
- CLUTCH CYLINDER
- CLUTCH KIT



Whatever, Whenever and Wherever

Whatever stands for our wide range of products which covers most car models all over the world.

Whenever stands for our accuracy for delivering products to our customer's hands under any circumstances.

Wherever stands for our global distribution channel which provides ultimate convenience for our customers.

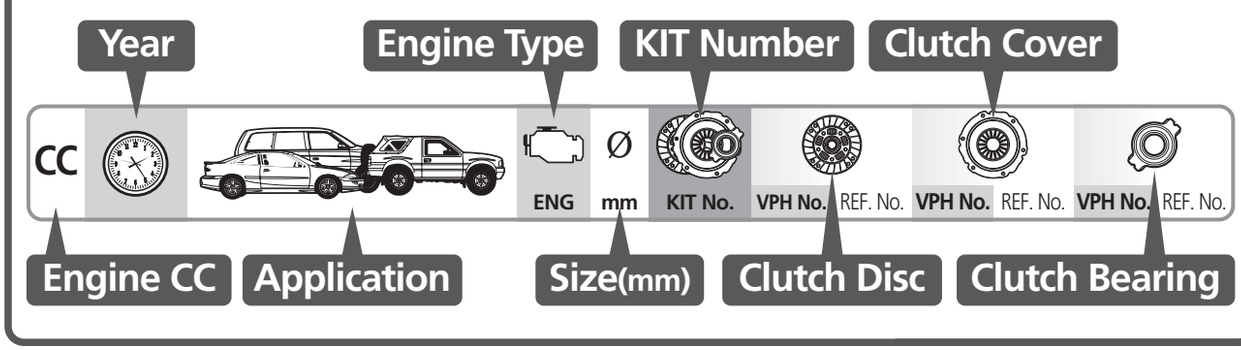
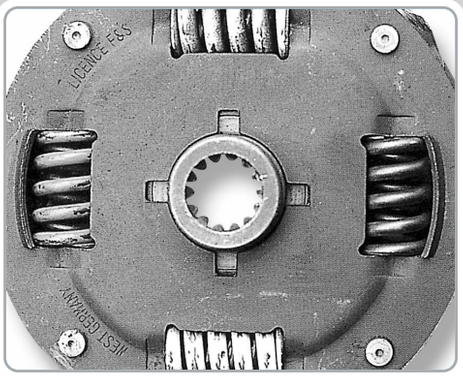
SYMBOL



TROUBLE SHOOTING MANUAL of CLUTCH SYSTEM

Section #1 Loss of Drive

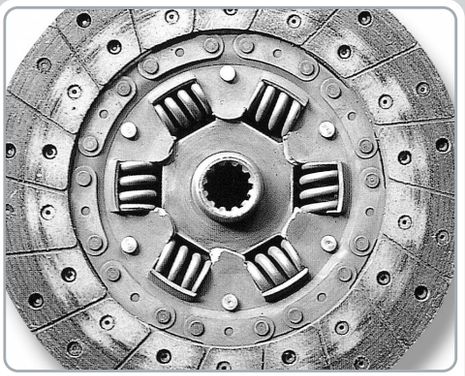


Cushion Plate broken

Cause
- The disc has been distorted when refitting the gear box on the engine.
- The engine and the gear box are misaligned.
- The pilot bearing is damaged.
- Aggressive driving.

Repair
- Replace the clutch kit.
- Realign the engine and the gear box.
- Replace the pilot bearing.

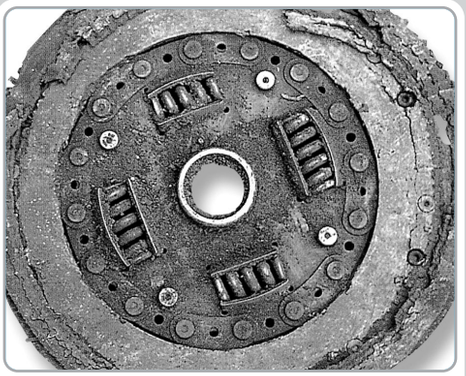
Caution
- Be careful in selecting the gears and do not over run the clutch.



Clutch disc plate broken

Cause
- Defective clutch installed or wrong direction for installation.

Caution
- Make sure that the correct kit is used on the application.

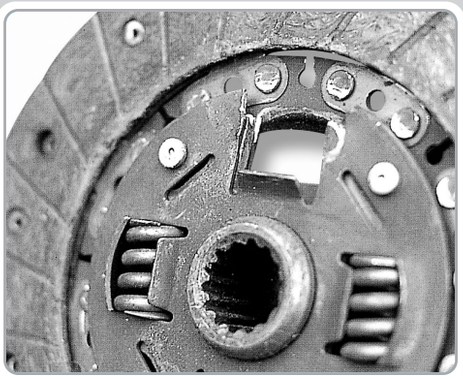


Clutch lining damaged

Cause
- Excessive slippage due to aggressive driving or overloading.
- The clutch operating system is badly adjusted or defective.

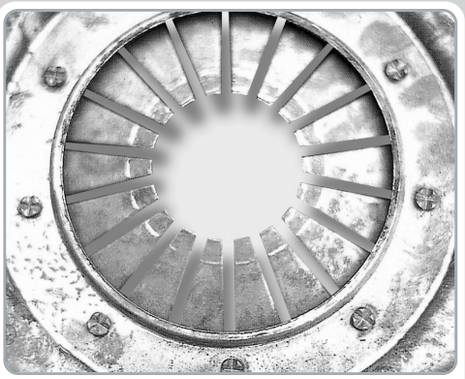
Repair
- Replace the clutch kit.
- Replace or machine evenly the flywheel.

Section #2 Noise



Unusual worn out on the torsion spring area

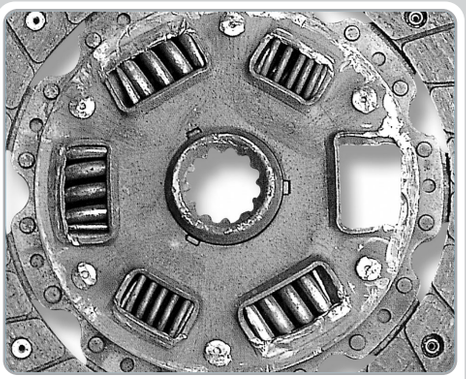
Cause
- Over torque applied to the clutch disc.



Noise while depressing clutch pedal

Cause
- Off centering of the release bearing or mis-alignment of the main shaft.

Repair
- Replace the release bearing.
- Realign the engine and the gear box.



Damper spring break away

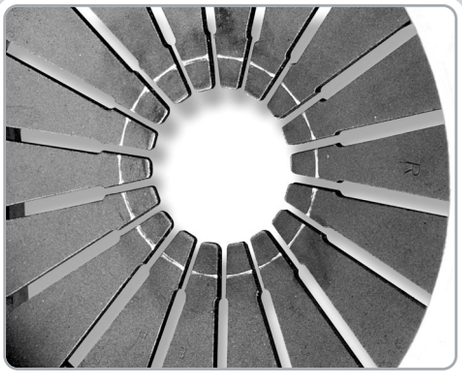
Cause
- Wrong clutch cover size used.
- Excessive release travel.
- The clutch disc is installed on the wrong side.

Repair
- Replace the flywheel.
- Adjust the clutch operating system. (pedal height, self adjusting system, clutch linkage...)
- Install the clutch disc properly.

Caution
- Make sure that the correct kit is used on the application.

TROUBLE SHOOTING MANUAL of CLUTCH SYSTEM

Section #2 Noise



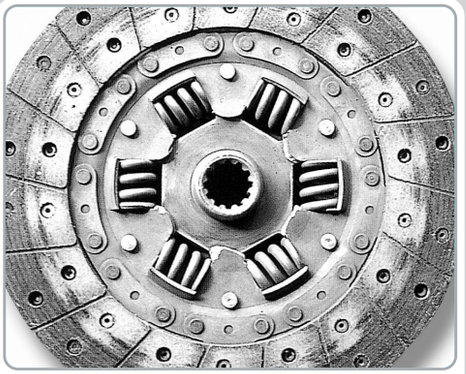
Metallic noise at bottom of pedal travel, difficult shifting

Cause

- The release travel is excessive causing the diaphragm spring to contact the clutch disc.

Repair

- Install new clutch and ensure correct adjustment.



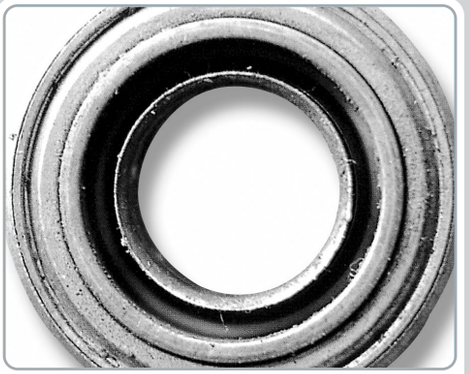
Clutch disc plate broken

Cause

- Defective clutch installed or wrong direction for installation.

Caution

- Make sure that the correct kit is used on the application.

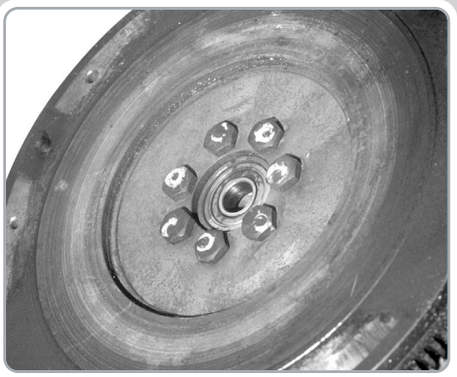


Release bearing damaged

Cause

- Seal torn.
- Overheating during slippage.
- Leakage of the grease.

Section #2 Noise



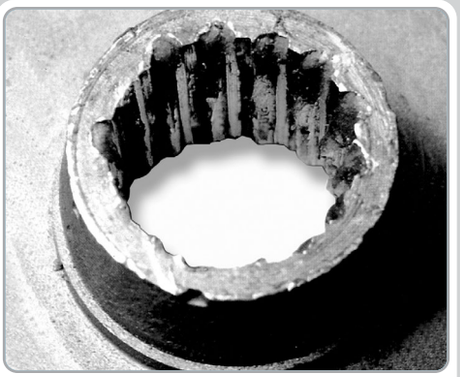
Noise during release

Cause

- Seized / worn pilot bearing / bushing.

Caution

- Replace pilot bearing / bushing.



Noise when in neutral

Cause

- Lack of care during installation, splines have been damaged by the gear box main shaft.

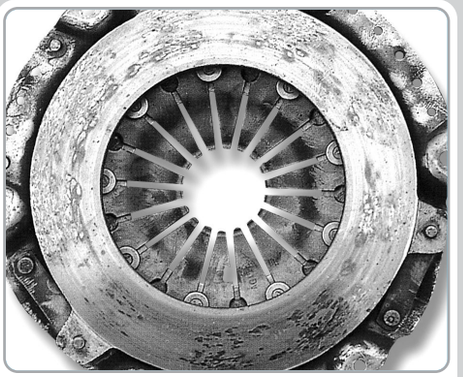
Repair

- Replace the main shaft.
- Replace the clutch disc.

Caution

- Make sure that the splines properly match up.
- Lubricate with a proper quantity of grease.

Section #3



Burn marks on the pressure plate

Cause

- Oil or grease contamination on the clutch linings or on the pressure plate.

Repair

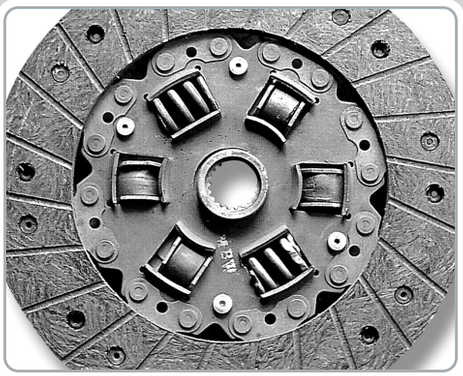
- Locate and repair all sources of contamination.
- Replace the clutch kit.

Caution

- Apply the correct quantity of grease on the clutch disc splines and the input shaft.
- Do not use contaminated pair of gloves.

TROUBLE SHOOTING MANUAL of CLUTCH SYSTEM

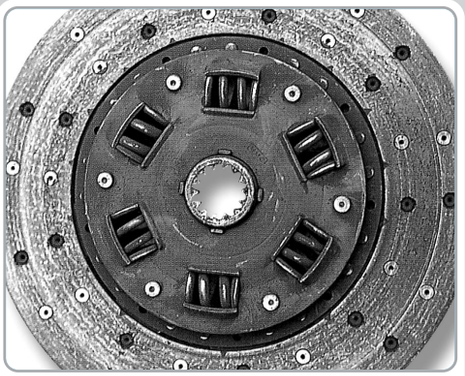
Section #3 Slipping & Chattering



Deformation of the clutch disc

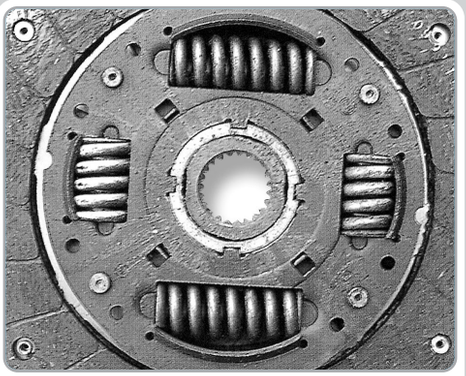
Cause
- Deformed during delivery or handling.
- Deformed during installation. (weight of the gear box, dropped)
- Deformation due to overheating during slippage.

Caution
- Handle with care.
- Do not place the clutch disc under a weight.



Clutch facing completely worn

Cause
- Use over product lifetime.
- Prolonged clutch slippage due to a malfunction or extremely severe use. Disc not changed during a previous flywheel / cover replacement.



Clutch lining contaminated with oil or grease

Cause
- Excessive greasing of the spline hub when installed.
- Oil leakage from engine or gear box.

Repair
- Replace the clutch disc.
- Locate and repair all sources of contamination.

Caution
- Apply the correct amount of grease on the clutch disc splines and the input shaft.

Section #3 Slipping & Chattering

Burn marks on the flywheel

Cause
- Excessive greasing of the spline hub when installed.

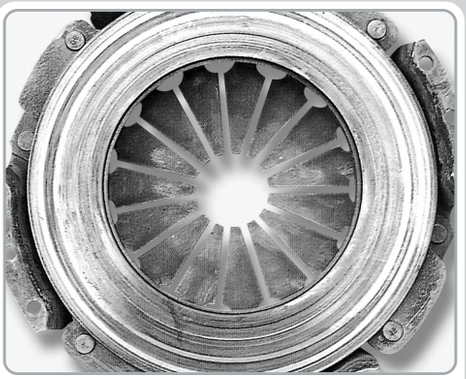
Repair
- Clean the flywheel and replace the clutch disc.

Caution
- Apply the correct amount of grease on the clutch disc splines and the input shaft.

Slipping Clutch

Cause
- Clutch facing material is oil contaminated.

Repair
- Replace leaking oil seals.
- Clean off excess oil and install new clutch.

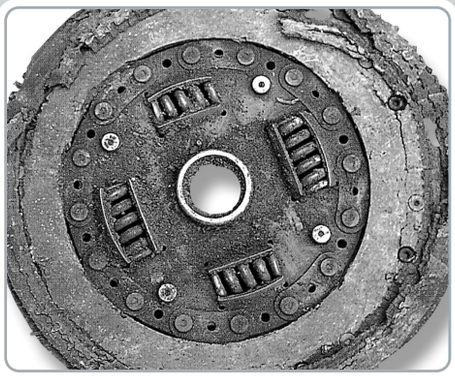


Circular grooves appearing on the pressure plate

Cause
- Linings worn out, heads of the facing rivets are in contact with the pressure plate.

TROUBLE SHOOTING MANUAL of CLUTCH SYSTEM

Section #3



Clutch lining damaged

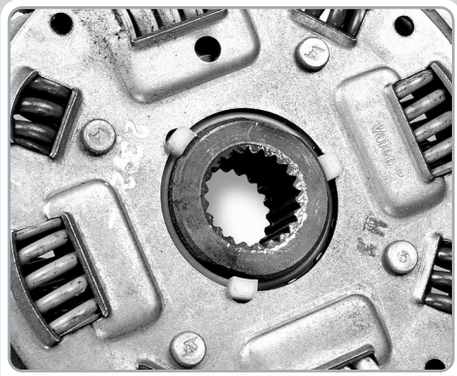
Cause

- Excessive slippage due to aggressive driving or overloading.
  The clutch operating system is badly adjusted or defective.

Repair

- Replace the clutch set.
- Replace or machine evenly the flywheel.

Section #4 Difficulty changing gears



Difficulty changing gears

Cause

- The transmission was forced into position damaging the splines of the disc hub.

Repair

- Install new clutch and carefully control the position and alignment of the transmission during installation.
- Use a transmission jack and possibly install temporary guide pins to assist in aligning the transmission to the engine.

Difficulty changing gears

Cause

- The cover assembly has been dropped.

Repair

- Install new clutch.
- Always inspect the drive straps for damage before installation.

Section #4

The drive straps of the clutch cover are damaged

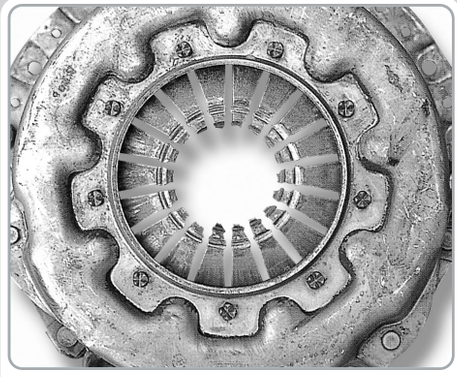
Cause

- Dropped during installation / overload.
- Using improper product.
- Improper gear selection.
  (ex: from 5th to 1st)

Repair

- Replace the clutch disc.
- Careful handling.
- Operate to normal conditions.

Section #5 Others



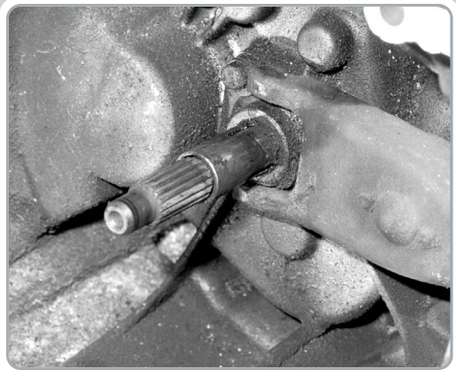
Difficulty shifting

Cause

- Incorrect release bearing travel.
- The clutch operating system is badly adjusted or defective.
- The level of pre-load on the release bearing is incorrect.

Repair

- Adjust the clutch operating system. (pedal height, self adjusting system, clutch linkage...) check the pre-load on the release bearing.



High pedal effort

Cause

- The release bearing does not freely slide on the guide tube.

Repair

- Clean and lubricate the guide tube to bearing contact area with high temp grease.
- If the guide tube is worn or scored, replace the guide tube.

TROUBLE SHOOTING MANUAL of CLUTCH SYSTEM

Section #5 Others

Grating noise and stiff pedal

Cause

- Insufficient lubrication of the clutch fork, particularly at the pivot point.

Repair

- Clean and lubricate all components using a high temp grease.
- If excessively worn, replace the fork and ball stud.

The contact point of the fork is worn out, the fork is off-centered

Cause

- The fork is out of shape.

Repair

- Replace by a genuine release fork.

Too much grease

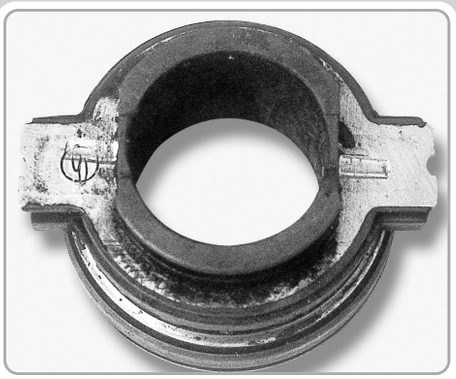
Cause

- Excess of lubrication, grease on the nose of the release bearing.

Repair

- Clean the release bearing.
- Apply the correct quantity of lubricant.

Section #5 Others



Clutch pedal binding

Cause

- The fork is out of shape.
- The release bearing guide tube is worn or the release arm / fork is bent / worn.

Repair

- Replace by a genuine release fork.
- Install new clutch and guide tube.
- Inspect all release bearing system components and repair or replace as needed.

Over torque

Cause

- Excessive engine brake operation.
- Incorrect disc for the application.
- Aggressive starting operation.
- The clutch operating system is badly adjusted or defective. (clutch pedal)

Repair

- Replace the clutch disc.
