The products you require are only a few clicks away

Remember to servicing the entire system and not only symptom management i.e.:

- Make precise diagnostic e.g. using the HC-CARGO diagnostic tool - saves you time and brings happy customers
- Always flush system to prevent extraneous particle entering new installed components in the A/C system
- Be aware that some of the condensers today, are made with very narrow lamellas. This has the consequence that sometimes the condenser must also be replaced because it cannot be flushed for extraneous particles.

- Always important to change dryers and expansion valve when system has been open to ensure full functionality of the A/C.
- To ensure everything is working correct after end repair:
 - Check if the repair is carried out right e.g. using the HC-CARGO diagnostic tool = making sure that the customer gets a good experience having the air conditioning system serviced with HC-CARGO A/C components.
