MARINE FABRIC COLLECTION 2014-2016

  
sunbrella®

### ULTRA RESISTANT

Choisir une toile de qualité, c'est avant tout être vigilant à la matière première qui compose la toile. Toutes les toiles Sunbrella® sont réalisées à partir d'acrylique Sunbrella teinté dans la masse. Contrairement à d'autres fils dont la couleur est obtenue par simple trempage, le fil Teint Masse Sunbrella est fabriqué avec la couleur au début de la fabrication de la fibre, quand l'acrylique est encore liquide. Il est ainsi coloré "à cœur" là où certains fils ne le sont qu'en surface. L'acrylique teint masse Sunbrella, c'est la garantie d'une durabilité exceptionnelle des coloris dans le temps.

### GARANTIES

Certains tissus Sunbrella® sont garantis 10 ans. Les tissus Sunbrella Plus, Supreme et Coussins sont garantis 5 ans (sauf Furling et Furling Adhesive). Les tissus Marine Seaguard et Sunworker de Dickson sont garantis 5 ans. Le tissu Surlast est garanti 3 ans. Voir conditions générales de garantie sur [www.dickson-constant.com](http://www.dickson-constant.com) et [www.sunbrella.com](http://www.sunbrella.com)

### OËKO-TEX

Cet agrément certifie la non toxicité des toiles acryliques traitées hydrofuges. Les tests ont permis de s'assurer de la non présence, dans les tissus présentant ce logo, d'odeurs, de colorants cancérigènes, de composants volatiles ou encore de pesticides.

### CERTIFICATION GREENGUARD : QUALITÉ DE L'AIR INTÉRIEUR

L'agrément Greenguard certifie que les toiles Sunbrella® sont faiblement émissives et qu'elles peuvent être utilisées en intérieur ou pour toute application où une qualité de l'air est nécessaire, avec la garantie qu'elles contribueront à conserver un air intérieur sain.

### CERTIFICATIONS QSE (Qualité-Sécurité-Environnement)

Dickson-Constant est certifié ISO 9001 depuis Juin 2003, ISO 14001 depuis Mars 2012 et OHSAS 18001 depuis Juin 2012. Ces certifications internationales du Bureau Veritas Certification illustrent la volonté de Dickson-Constant d'évoluer dans une démarche de progrès continu et de mieux répondre aux attentes de ses clients. Elles symbolisent la reconnaissance de la maturité et de l'efficacité de son système QSE.

### TISSUS SUNBRELLA® : LA MEILLEURE PARADE AUX UV

Amateurs ou professionnels de la mer recherchent pour leurs bateaux les tissus les plus résistants, mais aussi les plus performants en matière de protection solaire. Les tissus Sunbrella® sont tous classés de UPF30+ à UPF50+\*: ils procurent une excellente protection contre les UV, protégeant ainsi tous les types de peaux des effets nocifs du soleil. \*exceptés les tissus Furling, Furling Adhésif et Coussins.

Ce picto vous indique que la toile filtre 95% des rayons UV.

Ce picto vous indique que la toile filtre 100% des rayons UV.

Depuis 2005, les tissus Sunbrella® Marine bénéficient du label de recommandation de la fondation en faveur de la lutte contre le cancer de la peau « pour leur contribution efficace à la prévention des dommages causés à la peau par le soleil ». Ce label international est octroyé par un comité indépendant de photobiologie composé d'experts spécialisés dans les effets des rayons du soleil et le cancer de la peau. Difficile à obtenir (tests intensifs, critères stricts...), il garantit aux clients une protection efficace.

### ULTRA RESISTANT

*When choosing a quality fabric, it is important to recognise the raw material from which it derives. All Sunbrella® fabrics are made from solution dyed acrylic yarns. Contrary to other yarns, from which colour is obtained by a simple bath, Sunbrella solution dyed acrylic is made by adding the colour at the beginning of the production process, when the acrylic is still liquid. It is, therefore, coloured "to the heart" whereas some yarns are coloured on the surface only. Sunbrella solution dyed acrylic yarn is the guarantee of an exceptional durability of the colours over time.*

### WARRANTIES

*Most Sunbrella® fabrics are backed with a 10 year limited warranty. The Sunbrella Plus, Supreme and Cushions fabrics are backed with a 5 year limited warranty (except Furling and Furling Adhesive). Dickson's Seaguard and Sunworker marine fabrics are backed with a 5 year limited warranty. Surlast is backed with a 3 year limited warranty. See general warranty conditions on [www.dickson-constant.com](http://www.dickson-constant.com) and [www.sunbrella.com](http://www.sunbrella.com)*

### OËKO-TEX

*This approval certifies that the acrylic fabrics with waterproofing treatment are non toxic. The tests prove the absence of smell, carcinogenic colourings, volatile components or even pesticides in the fabrics carrying this logo.*

### GREENGUARD INDOOR AIR QUALITY CERTIFIED

*The Greenguard designation ensures that Sunbrella® fabrics are a low-emitting product and can be used indoors or in any application where enhanced air quality is preferred with the confidence that these fabrics will contribute to healthy indoor air.*

### QSE CERTIFICATIONS (Quality-Security-Environment)

*Dickson Constant is ISO 9001 certified since June 2003, ISO 14001 certified since March 2012 and OHSAS 18001 certified since June 2012. These international certifications from the Bureau Veritas Certification show Dickson-Constants' desire to advance in the evolution of continuous progress and to respond even better to its customers requirements. It symbolises recognition and efficiency of its QSE service.*

### SUNBRELLA® FABRICS: THE ULTIMATE UV PROTECTION

*Whether amateur or professional, sailors expect their marine fabrics to be very strong, but also to offer a high degree of solar protection. All Sunbrella® fabrics\* are now rated between UPF30+ and UPF50+: they offer an excellent protection against UV rays, protecting all skin types from the harmful effects of the sun. \* except Furling, Furling Adhesive and Cushions.*

*This pictogram indicates that the fabric filters 95% of UVB rays.*

*This pictogram indicates that the fabric filters 100% of UVB rays.*

*Since 2005, Sunbrella® marine fabrics benefit from the "Seal of Recommendation" of the Skin Cancer Foundation, for their "effective contribution to preventing skin damage caused by the sun". This international award is judged by an independent photobiology committee made up of experts on the effects of solar radiation and skin cancer. Difficult to obtain (involving intensive tests, strict criteria) it guarantees customers effective protection.*
