

ICS technology

The ICS (Inter-Call System) provides the highest possible effective protection thanks to the unique combination of three different locking technologies:

- An specially adapted hard-wearing length profile.
- An 100% metal curve profile, which, with each locking, automatically, and in the required pin position, the correct of contacts, also contained in the ICS key body - a unique feature not found anywhere else in the world. As a result, it is ideally pre-suited to manufacture conventional duplicate keys.

Lock authorization is granted by a total of 13 spring-loaded blocking pins in three rows as well as by the specially shaped length profile.

- Two rows of pins on the side with the non-right blocking pins also the curve on the key's side.
- One central row of pins with three blocking pins (two the contacts, one at the end) on the key's curve side.

Benefits

- Combination of three locking technologies.
- Optimum key copying protection due to the concealed scanning feature on the key. Both begin key protection (patents) and organizational key protection (secretly code).
- Resistant to hand design.
- Resistant to key.
- Original design.
- Most useful length (27 mm (1.06")) to ensure no cylinder jamming.
- Additional anti-theft device to standard equipment.
- Best locking system in Europe.
