DG10 mounting location

The DG10 doorgrip is mounted with a threaded rod and custom hexagonal nuts.

The center of the nut is always at 35 mm from the doors edge.

Insert a nut in the hole of one DG10, and install the threaded rod in this nut
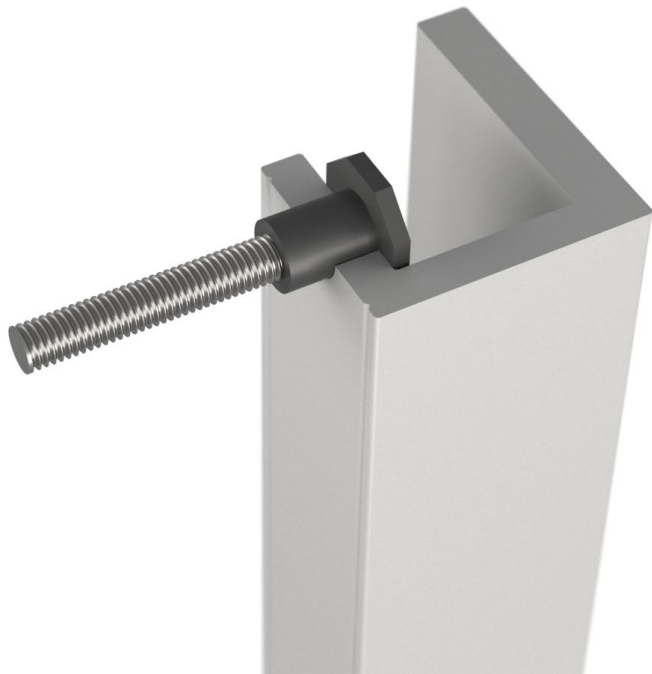

Position the DG10 + nut + rod through the hole in the door leaf.

Install a second nut on the other side and tighten it to lock both door grips together.

Repeat the same process for the other mounting hole.

Beware not to scratch the handle!

When mounting on glass panels, use the plastic bushing as glass hole protection.

Place end caps to hide saw cuts and to cover sharp edges.
Apply glue when mounting.
