TRAVERTINO ROMANUM

Lime based mineral plaster with natural Travertine design

TRAVERTINO ROMANUM is a decorative covering made of hydrated and micronized lime, marble powder and silica sands. It is formulated with inorganic pigments, special additives and inert minerals. It allows to reproduce the stone effect. It has an excellent resistance against aggressive agents in industrial or marine zone as well against U.V. rays and mould.

It is recommended for application on interior and exterior walls of prestigious modern and antiques buildings.

Application

Inox spatula or trowel: The product is ready to use. In special case could be tinned by water up to 5%.

Apply 1 coat of TRAVERTINO ROMANUM by steinless steel with thickness of about 1,5:2 mm once still wet. Work it by special buffer RIGATO in order to create characteristic marble irregular veining. As soon as the product starts to dry proceed with the first polishing by steinless steel spatula to smooth more evident ripples. Once completely dry repeat the polishing. To reproduce leaks between the stones use the batten to etch the surface with the tip of spatula. Leave to dry at least for 24 hours before to apply the finishing. When still wet it is possible to apply one second coat of TRAVERTINO ROMANUM to obtain more thickness and work it as described for the first coat before.

Finishing TRAVERTINO ROMANUM with colored veiled effect:

After 24 hours of TRAVERTINO ROMANUM application, it is possible to apply 1 coat of VELATURA in order to protect the lime and obtain an antiques effect.

Temperature of application: +10 ÷ +35 °C
Relative humidity of application: < 85 %
Touch dry: 2 ÷ 4 hours
Recoatable after: 24 hours
Completely Cured: 20-25 days
Drying time for washing: 30 days

Density: 1,7 1,8 Kg/L
pH: 12-14
Weight Solids: 75%
Coverage: 0,5 – 1 m2/Kg
Colour: Color chart
Aspect: Antique marble
Pack Size: 4 - 20 -24Kg

Step	Name	Coats	Yields	Color code	Tools
