1 Due to the barrel design of the X10, the weight is an average grains-per-inch of a 29" shaft. Shaft weight is slightly heavier in the larger diameter center and lighter toward the tapered ends. One inch of shaft cut from the point end typically weighs 6-7 grains.

2 Nominal O.D. at mid-point of shaft. Ends are smaller.

3 Recommended that no more than these lengths be cut from the front of the shaft.

1 Due to the taper design of the X10 Pro Tour, the grain weight-per-inch shown is an average weight-per-inch of a 29" shaft. Shaft weight is slightly heavier toward the larger-diameter nock end and lighter toward the tapered front end. One inch of shaft cut from the point end typically weighs 6-7 grains.

2 Nominal O.D. at mid-point of shaft. Front end is smaller.

3 Recommended that no more than these lengths be cut from the front of the shaft.

ALUMINUM/CARBON

FMJ MATCH

FMJ MATCH™

The FMJ Match is the high-performance, high-strength Full Metal Jacket carbon shaft for tournament compound and recurve archers. Provides superior kinetic energy, better long-distance accuracy, and more durability in tough target butts. Made from a high-tensile aluminum jacket over a high-modulus carbon fiber core for ultimate consistency and material synergy.

- Reduced 4MM (G) diameter for optimal outdoor performance
- Compatible with existing Easton Carbon One components
- 7075 aerospace alloy diamond polished anodized silver finish
- Factory straight, weight & spine matched

EASTON
ULTRA-HIGH MODULUS CARBON

WORLD CLASS STABILIZERS

Contour CS™ A favorite of champions, the Contour CS™ features the most extreme stiffness to weight ratio we have ever developed for a stabilizer. Featuring aerospace-grade graphite fiber, the Contour CS is optimized for shooters looking for the stiffest possible stabilizer with superior hold and a wind-cheating slim profile for rock-solid aiming. Contour CS™—the most advanced stabilizer ever, from the company that pioneered carbon stabilizers—Easton.

EASTON

Contour™ Proven performance Contour stabilizer uses a complex carbon fiber construction to damp out post-shot vibration while providing an unmatched aiming experience, even in crosswinds. The Windcutter-360™ design of Contour promotes a steady confidence in crosswinds while the large-diameter base promotes enhanced vibration reduction with no need for rubber decouplers. Choose the super-light, original Contour for a slightly softer feel on follow-through. Light and efficient, Contour is compatible with 1/4"-20 weight systems or 5/16"-24 flat vari-weights for competitors seeking the most compact setup.

Pro-Link™ Extender The podium-proven Easton Pro-Link stabilizer extension is reinforced with a full-length Internal Stainless Steel Reinforcement Beam. This super-strong beam links the precision internal-bonded ferrules at each end to create a torque-resistant system capable of handling heavy loading, abusive v-bar torquing, and the stress of high-energy bows. The internal stainless steel beam of Pro-Link Extension has been tested and proven at the highest levels of competition by some of the best archers on the planet. Pro-Link is also the stiffest extension we've ever made. The precision-made Pro-Link extension is ideally matched to an Easton stabilizer, and is fully compatible with most other ATA compliant stabilizer systems with 5/16-24 threads.

ARROW SELECTION

USING THE TARGET ARROW SELECTION CHART

1. Once you have determined your *Correct Target Arrow Length* and *Calculated or Actual Peak Bow Weight*, you are ready to select your correct shaft size:
- 1.A *Compound bows*. In the "Calculated Peak Bow Weight" column (left-hand side of the chart), select the column with the type of cam on your bow. Locate your *Calculated Peak Bow Weight* in that column.
- 1.B *Recurve bows and Modern Longbows*. In the "Recurve Bow Weight" column (right-hand side of the chart), select the column with the bow type. Next, locate your *Actual Peak Bow Weight* in that column.
2. Move across that bow-weight row horizontally to the column indicating your Correct Arrow Length. Note the letter in the box where your *Calculated or Actual Peak Bow Weight* row and *Correct Target Arrow Length* column intersect. The "Shaft Size" box below the chart with the same letter contains your recommended shaft sizes. Select a shaft from the chart depending on the shaft material, shaft weight, and type of shooting you will be doing.

SELECTING THE CORRECT TARGET SHAFT SIZE

Our Target Shaft Selection Chart will help you find the perfect shaft match for your bow—quickly and easily. Advanced, interactive Spine Weight Comparison and Target Shaft Selection Charts are now available online at www.eastonarchery.com

1. Determining Correct Target Arrow Length

The *Correct Arrow Length* for bows (including bows with overdraws) is determined by drawing an extra-long arrow to full draw and having someone mark the arrow one inch in front of where the arrow contacts the most forward portion of the arrow rest.

Bow Draw Length. Draw length is measured at full draw from the bottom of the nock groove to the back (far side) of the bow. Actual arrow length and draw length are only the same if the end of the arrow shaft is even with the back of the bow (far side) at full draw.

2. Determining Actual Peak Bow Weight Compound Bows

Compound bows must be measured at the peak bow weight as the bow is being drawn and not while letting the bow down.

The suggested shaft sizes in the charts were determined using a “Standard” Setup which includes:

- Use of a release aid
- Compound bow with brace height greater than 6½”

If your setup differs from the “Standard” Setup, use the *Variables* (following) to make adjustments to determine the *Calculated Peak Bow Weight* so the correct arrow size can be selected on the chart.

Variables to the “Standard” Setup for Compound Bows

- Point weight over 100 grains—Add 3 lbs. for each 25 grains heavier than 100 grains.
- Bows with brace heights less than 6½”—Add 5 lbs.
- Finger release—Add 5 lbs.

Overdraw Compound Bows

If you are using an overdraw, make the variable calculations (if any), and then modify the *Calculated Peak Bow Weight* of your bow using the chart below.

Length of Overdraw	1”	2”	3”	4”	5”
For 50#–70# Actual/Calculated Peak Bow Weight, add to bow weight —	1#	3#	6#	9#	12#

3. DETERMINING ACTUAL PEAK BOW WEIGHT RECURVE AND MODERN LONGBOWS

Your local archery pro shop is the best place to determine the actual draw weight of your bow. *Actual Peak Bow Weight* for recurve bows and longbows should be measured at your draw length.

LOW POUNDAGE RECURVE BOW Bow Weight—lbs. Finger Release	YOUR ARROW LENGTH						
	21"	22"	23"	24"	25"	26"	27"
16–20 lbs. (7.3–9.1 kg)			Y1	Y1	Y2	Y3	Y4
20–24 lbs. (9.1–10.9 kg)		Y1	Y1	Y2	Y3	Y4	Y5
24–28 lbs. (10.9–12.7 kg)	Y1	Y1	Y2	Y3	Y4	Y5	Y6
28–32 lbs. (12.7–14.5 kg)	Y1	Y2	Y3	Y4	Y5	Y6	Y7
32–36 lbs. (14.5–16.3 kg)	Y2	Y3	Y4	Y5	Y6	Y7	
36–40 lbs. (16.3–18.1 kg)	Y3	Y4	Y5	Y6	Y7		

Note: If your arrow shaft is longer than inch length shown, round-up to the next longer increment.

LIMITED WARRANTY
The Easton arrow shaft limited warranty covers any defects in material and/or workmanship for one year from the original owner's date of purchase. Arrow shafts that are defective will be replaced by your local Easton dealer with proof of purchase. Damage caused by impact from other arrows, impact with hard objects, improper cleaning or fletching, or from normal wear and tear is not covered by Easton's limited warranty. The limited warranty also does not cover damage resulting from your failure to follow Easton's written instructions. For written instructions and warranty details see www.eastonarchery.com.

1 XX75 Tribute, Jazz, Platinum Plus, Genesis.

2 X7 Eclipse.

3 Length is approximate stock shaft length for each size.

4 Nock size for conventional swaged nock taper.

5 UNI—Universal Nock Installation System.

6 Parentheses indicate smaller G Nock UNI Bushing size is available as an optional accessory.

7 RPS = Replaceable Point System with 8-32 ATA Standard thread.

8 NIBB point grain weights are ±0.5 grain. All other components are ±1 grain.

9 This NIBB point will provide approximately an 8% F.O.C. All other NIBB points are approximately 7% F.O.C. F.O.C. is Front-of-Center balance position on the arrow shaft.

10 Super UNI Bushing accepts Super, S, 3D Super Nock, and Micro Super Nock.

⚠ WARNING FOLLOW THESE INSTRUCTIONS TO AVOID PERSONAL INJURY. SEE WARNINGS AND USE AT WWW.BSAFE.WS OR 877-INFO-ETP (877-463-6387).

BOW INSPECTION
Before shooting any Easton arrow, it is critical to inspect your bow, including all components, to be sure that it is properly adjusted and in good working order. Easton arrows should only be used with bows that have a correct pull weight and draw length (see arrow selection chart at www.eastonarchery.com/shaft-selector/). Selecting the correct arrow and arrow length for the bow is the responsibility of the shooter, and failure to do so could result in personal injury and/or equipment damage.
WARNING! NEVER SHOOT AN ARROW WITH AN IMPROPERLY ADJUSTED OR DAMAGED BOW.

ARROW BREAKAGE
Any arrow can become damaged. A damaged arrow could break upon release and injure you or a bystander. Damage to an arrow shaft, or any of its components, may occur from improper transport, handling, or use; impacts with hard objects or other arrows; or, after being shot into a game animal. No list can cover all possible conditions and situations that may cause damage. Use good judgment and common sense, as well as follow the warnings and instructions below, to determine if your arrow has been damaged in any way.
WARNING! NEVER SHOOT A DAMAGED ARROW.

ARROW USE PRECAUTIONS
Before each shot (including the first shot of a new arrow) carefully inspect each arrow shaft and all arrow components to see that they have not been damaged. Before shooting, place the arrow between your thumb and fingers, and using your other hand to slowly rotate the shaft, run your fingertips along the entire arrow length, feeling and looking closely for nicks, cracks, splits, dents, or other marks that could indicate the shaft has been damaged (see arrow inspection video at www.eastonarchery.com/warning-use/). If your arrow is crested, inspect for damage on the crest surface and for any soft spots under the crest wrap. You may need to remove the cresting to make a thorough inspection. If damage is present, DISCARD THE ARROW.
WARNING! NEVER SHOOT A DAMAGED ARROW.

Before each shot, inspect the nock for damage and check that it is fully seated, and fits tightly in the shaft. Apply twisting pressure to see if the nock turns easily. If the nock has backed out of the arrow or turns easily, inspect for cracks in the arrow shaft. If there are cracks in the arrow shaft, or if the nock is loose, DISCARD THE ARROW. **WARNING! NEVER SHOOT A DAMAGED ARROW.** If the nock is damaged, REPLACE THE NOCK.
WARNING! NEVER SHOOT AN ARROW WITH A DAMAGED NOCK.

ADDITIONAL TESTS FOR CARBON ARROWS
When checking carbon arrows, perform the following additional tests:

1. Grasp the shaft just above the point and below the nock, then flex the arrow in an arc (bending it away from you and others) with a deflection of 1 to 2 inches (2.5 to 5 cm), and feel and listen for cracking (*Figure 1*). Perform this test 4 to 6 times, rotating the arrow slightly between each flex until you have gone around the entire arrow. If you hear or feel cracking, the carbon has been damaged, DISCARD THE ARROW.
WARNING! NEVER SHOOT A DAMAGED ARROW.

FIGURE 1

2. While still holding the point and fletching ends of the arrow, twist the shaft in opposite directions (*Figure 2*). If the arrow "relaxes" or twists easily, the carbon has been damaged. DISCARD THE ARROW.
WARNING! NEVER SHOOT A DAMAGED ARROW.

FIGURE 2
- A damaged arrow could break upon release and injure you or a bystander. If you have any reason to believe that an arrow has been damaged, DISCARD THE ARROW.
WARNING! NEVER SHOOT A DAMAGED ARROW.
- CARBON ARROW CUTTING**
Only cut a carbon arrow using a high-speed arrow cut-off saw. Using any other saw or cutting device may cause damage to the arrow. If an arrow has been cut without using a high-speed arrow cut-off saw, DISCARD THE ARROW. **WARNING! NEVER SHOOT A DAMAGED ARROW.**
- To reduce your risk of serious injury or death, you must read and understand all safety warnings and instructions. If you do not understand these instructions, or cannot adequately perform the above tests, STOP and seek appropriate assistance before shooting any arrow.**
