

Фильтр AF10-60

M5 ~ G1

Предназначен для удаления из сжатого воздуха механических загрязнений и конденсата

- Фильтрующий элемент, изготовленный из пластика, обеспечивает увеличенный расход воздуха при высокой степени очистки (5 мкм)
- Легкая замена фильтрующего элемента
- Пригоден для модульного монтажа

Примечания: 1) Комплект включает угольник и установочную гайку

Комплект включает угольник и два установочных винта
 Только для исполнения В. Уплотнительное кольцо и два установочных винта в комплекте.

4) Для 1 МПа

5) Только для исполнения В.

Комплект включает кабель (2 м) с разъемом, адаптер, фиксатор, кольцевую прокладку (1 шт.) и монтажные винты (2 шт.)

Для всех исполнений манометры заказываются отдельно

Маслораспылитель

AL10-60 M5 ~ G1

Предназначен для подачи масла в пневмосистему пропорционально расходу сжатого воздуха в случаях когда это необходимо (пневмоинструмент и т.д.)

• Пригоден для модульного монтажа

Технические характеристики

Фильтр/регулятор

M5 ~ G1

Комбинация двух устройств – воздушного фильтра и регулятора давления в одном корпусе, что позволяет экономить рабочее пространство Предназначен для удаления из сжатого воздуха механических загрязнений и конденсата,

- а также для понижения давления сжатого воздуха и поддержания его на заданном уровне
- Фильтрующий элемент, изготовленный из пластика, обеспечивает увеличенный расход воздуха
- при высокой степени очистки (5 мкм)
- Легкая замена фильтрующего элемента. Пригоден для модульного монтажа
- Высокотемпературные (до +80) и низкотемпературные (от -30) исполнения

1) Манометры поставляются по запросу

Для всех исполнений манометры заказываются отдельно

- 1) Комплект включает угольник и установочные гайки
- 2) Только для исполнения В. Прилагаются одно уплотнительное кольцо
- и два установочных винта
- 3) Для давления 1.0 МПа 4) Минимальное рабочее
- давление: H.O. 0.1 МПа, H.3. 0.1 МПа (AD17/27) и 0.15 МПа (AD37/47)
- 5) Только для исполнения В.
- Включает кабель (2 м) с разъемом, адаптер, фиксатор, кольцевую прокладку (1 шт.) и монтажные винты (2 шт.)

Реле давления IS10

Реле давления IS10 применяется для контроля давления сжатого воздуха

- Ресурс 5 млн циклов
- Пригодно для модульного монтажа
- Варианты монтажа: на выходе блока подготовки сжатого воздуха, • между устройствами подготовки сжатого воздуха, самостоятельный монтаж .
- Исполнения с диапазоном с диапазоном срабатывания (0.1 ~ 0.4) МПа, с кабелем 0.5 м или 5 м - по запросу

CAT.EUS40-60B-UK

Transparent bowl guard

Better environmental resistance: Transparent bowl guard can protect the inner bowl!

Better visibility: 360°

Use of transparent bowl guard makes it possible to check the condensate inside the filter bowl and the remaining oil amount in the lubricator from the entire periphery.

Light weight: Max. 90 g reduction * Except AW

AF40

Weight 450 g

AF40-A

Metal related corrosion does not occur.

Resin body does not rust.

New Spacer

Modular connection

Step ①

- Mount the product by lining up the mating surface of the new spacer with bracket.
- Insert the retainer into the spacer bolt and tighten the nut. (temporary assembling)

Step 2

• Tighten the nut with the hexagon wrench.

Interchangeable with previous model

New spacer can be connected to the previous AF, AR, AL, AW series.
Previous spacer can be connected to the new AF

–A, AR

–(K)-B, AL

Check valve Page 34 A check valve with intermediate branch port can be easily installed to prevent a backflow of lubricant when branching the air flow and releasing the air on the outlet side of the regulator. Check valve · Air Filter + Regulator + Lubricator (AC20-B to AC40-B) Applicable ser · Filter Regulator + Lubricator (AC20A-B to AC40A-B) * Port size: Except 06

Page 35

- · Air Filter + Regulator (AC20B-B to AC60B-B)
- · Air Filter + Mist Separator + Regulator (AC20C-B to AC60C-B) · Filter Regulator + Mist Separator (AC20D-B to AC60D-B)

Pressure relief 3 port valve Page 36

With the use of a pressure relief 3 port valve, pressure left in the line can be easily exhausted.

- · Air Filter + Regulator + Lubricator (AC20-B to AC50-B)
- series · Filter Regulator + Lubricator (AC20A-B to AC50A-B)
 - · Air Filter + Regulator (AC20B-B to AC50B-B)
- Air Filter + Mist Separator + Regulator (AC20C-B to AC40C-B)
- policable · Filter Regulator + Mist Separator (AC20D-B to AC40D-B)

Piping adapter

A piping adapter allows installation/removal of the component without removing the piping and thus makes maintenance easier.

* Needs to be ordered separately.

*1 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl.

Releasing the residual condensate before ending operations for the day is recommended. *2 A 1.0 MPa pressure gauge will be fitted. It is not assembled and supplied loose at the time of shipment.

*3 The bracket position varies depending on the T-spacer mounting.

*4 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.

*5 Refer to chemical data on page 46 for chemical resistance of the bowl.

▲ Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Selection

ACaution

- 1. When releasing air at the intermediate position using a T-spacer on the inlet side of the lubricator, lubricant may back flow. Therefore, releasing air that does not contain traces of lubricant is not possible.
- **2.** An F.R.L. unit shipped from the plant has its model number labelled. However, components that are combined together during the distribution process do not have a label on them.

- *1 Drain guide is NPT 1/8 (applicable to the AC20-B) and NPT 1/4 (applicable to the AC25-B to AC60-B). The auto drain port comes with Ø 3/8" One-touch fitting (applicable to the AC25-B to AC60-B).
- *2 Drain guide is G 1/8 (applicable to the AC20-B) and G 1/4 (applicable to the AC25-B to AC60-B).
- 3 Options G, M are not assembled and supplied loose at the time of shipment.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min[ANR]), air leakage from the drain cock may occur during start of operations. N.C. type is recommended.
- *6 When the pressure gauge is attached, a 1.0 MPa

pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type. *7 Not available with piping port size: 06

- *8 The bracket position varies depending on the T-spacer
- or pressure switch mounting. *9 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *10 Refer to chemical data on page 46 for chemical resistance of the bowl.
- *11 A bowl guard is provided as standard equipment (polycarbonate).
- *12 A bowl guard is provided as standard equipment (nylon).
- *13 The combination of float type auto drain: C and D is not available.
- *14 Without a valve function

- *15 The combination of metal bowl: 2 and 8 is not available.
 *16 When choosing with W: Filter drain port, the drain
- cock of a lubricator will be with barb fittings. *17 For pipe thread type: NPT.
 - Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
- *18 For options: E1, E2, E3, E4.
- *19 O: For pipe thread type: NPT only
- *20 \triangle : Select with options: E1, E2, E3, E4.

▲ Specific Product Precautions

sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units I I Be precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Mounting/Adjustment

\land Caution

1. A knob cover is available to prevent careless operation of the knob. Refer to page 112 for details.

Piping

\land Warning

1. When mounting a check valve, make sure the arrow (IN side) points in the correct direction of air flow.

Air Supply

A Caution

1. Use an air filter with 5 μ m or less filtration rating on the inlet side of the valve to avoid any damage to the seat caused by dust when mounting a pressure relief 3 port valve on the inlet side.

Mounting/Adjustment

\land Caution

1. When the bowl is installed on the air filter, filter regulator, lubricator, mist separator, or micro mist separator (AC25-B to AC60-B), install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Selection

\land Warning

- 1. Float type auto drain
 - Operate under the following conditions to avoid malfunction. <N.O. type>
 - · Operating compressor: 0.75 kW (100 l/min (ANR)) or more. When using 2 or more auto drains, multiply the value above by the number of auto drains to find the capacity of the compressors you will need.
 - For example, when using 2 auto drains, 1.5 kW (200 l/min (ANR)) of the compressor capacity is required.
 - · Operating pressure: 0.1 MPa or more
 - <N.C. type>

· Operating pressure for AD27-A: 0.1 MPa or more

Operating pressure for AD37-A/AD47-A: 0.15 MPa or more

2. Use a regulator or filter regulator with backflow function when mounting a pressure release 3 port valve on the inlet side to ensure the release of the residual pressure. Otherwise, residual pressure will not be fully released.

A Caution

1. When releasing air at the intermediate position using a T-spacer on the inlet side of the lubricator, lubricant may back flow. Therefore, releasing air that does not contain traces of lubricant is not possible.

To release air that does not contain traces of lubricant, use a check valve (AKM series) on the inlet side of the lubricator to prevent a backflow of the lubricant.

- 2. If a pressure relief 3 port valve is mounted on the inlet side of the lubricator, causing a backflow of air, it can result in a backflow of oil or damage to internal parts. Do not use it in this fashion.
- 3. An F.R.L. unit shipped from the plant has its model number labeled. However, components that are combined together during the distribution process do not have a label on them.

- *1 Drain guide is NPT 1/8 (applicable to the AC20C-B) and NPT 1/4 (applicable to the AC25C-B to AC40C-B) The auto drain port comes with Ø 3/8" One-touch fitting (applicable to the AC25C-B to AC40C-B).
- *2 Drain guide is G 1/8 (applicable to the AC20C-B) and G 1/4 (applicable to the AC25C-B to AC40C-B).
- *3 Options G, M are not assembled and supplied loose at the time of shipment.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min [ANR]), air leakage from the drain cock may occur during start of operations. N.C. type is recommended.
- *6 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- *7 The bracket position varies depending on the T-spacer or pressure switch mounting.
- *8 Make sure that the outlet pressure is released to atmospheric pressure using a pressure gauge.
- *9 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *10 Refer to chemical data on page 46 for chemical resistance of the bowl.
- *11 A bowl guard is provided as standard equipment (polycarbonate)
- *12 A bowl guard is provided as standard equipment (nylon).

- *13 The combination of float type auto drain: C and D is not available.
- *14 Without a valve function
- *15 The combination of metal bowl: 2 and 8 is not available.
- *16 For pipe thread type: NPT.
- Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially. *17 For options: E1, E2, E3, E4.
- *18 O: For pipe thread type: NPT only
- *19 △: Select with options: E1, E2, E3, E4.

*1 □ in part numbers for a round type pressure gauge indicates a pipe thread type. No indication is necessary for R; however, indicate N for NPT. Please contact SMC regarding the connection thread NPT and pressure gauge supply for psi unit specifications.

Regarding how to order the digital pressure switch, refer to the **Web Catalogue**. *4 Minimum operating pressure: N.O. type–0.1 MPa; N.C. type–0.1 MPa (AD27-A) and 0.15 MPa (AD37-A/AD47-A). Please consult with SMC separately for psi and °F unit display specifications.

 *2 Including one O-ring and 2 mounting screws
 *3 Lead wire with connector (2 m), adapter, lock pin, O-ring (1 pc.), mounting screw (2 pcs.) are attached. []: Switch body only.

*5 For F.R.L. units, port sizes without () are standard specifications.
 *6 Separate spacers are required for modular unit.

Check Valve: (K) 1/8, 1/4, 3/8

A check valve with intermediate air release port can be easily installed to prevent a backflow of lubricant when redirecting the air flow and releasing the air on the outlet side of the regulator.

*1 $\hfill\square$ in model numbers indicates a pipe thread type. No indication is necessary for Rc; however, indicate N for NPT, and F for G.

Separate spacers are required for modular unit.

* Refer to the attachment table on page 34 for standard port sizes when using with the AC.

Caution on Mounting

If a T-spacer is used on the inlet side of the lubricator, lubricant may be mixed. Use the AKM series check valve to avoid such possibility.

The auto drain port comes with Ø 3/8" One-touch fitting (applicable to the AF30-A to AF60-A).

*2 Drain guide is G 1/8 (applicable to the AF20-A) and G 1/4 (applicable to the AF30-A to AF60-A).

The auto drain port comes with Ø 10 One-touch fitting (applicable to the AF30-A to AF60-A).

*3 Option B is not assembled and supplied loose at the time of shipment. Assembly of a bracket and 2 mounting screws. *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl.

Releasing the residual condensate before ending operations for the day is recommended.

*5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min [ANR]), air leakage from the drain cock may occur during start of operations. N.C. type is recommended.

*6 Refer to chemical data on page 46 for chemical resistance of the bowl.

*7 A bowl guard is provided as standard equipment (polycarbonate).

*8 A bowl guard is provided as standard equipment (nylon).

*9 The combination of float type auto drain: C and D is not available.

*10 Without a valve function

*11 The combination of metal bowl: 2 and 8 is not available.

*12 For pipe thread type: M5, NPT.

*13 \bigcirc : For pipe thread type: M5, NPT only

SMC

in bowl assembly part numbers indicates a pipe thread type (applicable tubing for auto drain). No indication is necessary for Rc thread; however, indicate N for NPT thread, and F for G thread. (For auto drain, —: \emptyset 10, N: \emptyset 3/8") Please consult with SMC separately for psi and °F unit display specifications.

Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Design/Selection

Warning

1. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

When the above factors are present, or there is some doubt, use a metal bowl for safety.

Maintenance

- \land Warning
- Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting/Adjustment

A Caution

 When the bowl is installed on the air filter (AF30-A to AF60-A), install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

AW

AB

A

AF10-A to AF60-A Series

Working Principle: Float Type Auto Drain

N.O. type: AD38-A, AD48-A

Compact auto drain N.C. type: AD17-A, AD27-A

• When pressure inside the bowl is released:

When pressure is released from the bowl (1), the piston (7) is lowered by the spring (6).

The sealing action of the seal 0 is interrupted, and the outside air flows inside the bowl 1 through the housing hole 9 and the drain cock 1.

Therefore, if there is an accumulation of condensate in the bowl ①, it will drain out through the drain cock.

• When pressure is applied inside the bowl:

When pressure is 0.1 MPa or more, the force of the piston \bigcirc surpasses the force of the spring (6), and the piston goes up.

This pushes seal $(\widehat{0})$ up so that it creates a seal, and the inside of the bowl $(\widehat{1})$, is shut off from the outside air.

If there is no accumulation of condensate in the bowl (1) at this time, the float (2) will be pulled down by its own weight, causing the valve (4), which is connected to the lever (3), to seal the valve seat (5).

When there is an accumulation of condensate in the bowl:

The float $(\widehat{2})$ rises due to its own buoyancy and the seal at the valve seat $(\widehat{5})$ is interrupted. This allows the pressure inside the bowl $(\widehat{1})$ to

enter the chamber (a). The result is that the combined pressure inside the chamber (a) and the force of the spring (b) lowers the piston (c). This causes the sealing action of the seal (b) to

This causes the sealing action of the seal (0) to be interrupted, and the accumulated condensate in the bowl (1) drains out through the drain cock (1).

Turning the drain cock 1 manually counterclockwise lowers the piston 7, and causes the seal created by the seal 1 to be interrupted, thus allowing the condensate to drain out. 47

• When pressure inside the bowl is released:

Even when pressure inside the bowl 1 is released, spring 6 keeps the piston 7 in its upward position.

This keeps the seal created by the seal 1 in place; thus, the inside of the bowl 1 is shut off from the outside air.

Therefore, even if there is an accumulation of condensate in the bowl $(\ensuremath{\underline{1}}),$ it will not drain out.

When pressure is applied inside the bowl:

Even when pressure is applied inside the bowl (1), the combined force of the spring (6) and the pressure inside the bowl (1) keeps the piston (7) in its upward position.

This maintains the seal created by the seal 0 in place; thus, the inside of the bowl 1 is shut off from the outside air.

If there is no accumulation of condensate in the bowl ① at this time, the float ② will be pulled down by its own weight, causing the valve ④, which is connected to the lever ③, to seal the valve seat ⑤.

• When there is an accumulation of condensate in the bowl:

The float (2) rises due to its own buoyancy and the seal at the valve seat (5) is interrupted. This allows the pressure inside the bowl (1) to enter the chamber (8).

The result is that the pressure inside the chamber (8) surpasses the force of the spring (6) and pushes the piston downward.

This causes the sealing action of the seal (1) to be interrupted and the accumulated condensate in the bowl (1) drains out through the drain cock (1).

Turning the drain cock (1) manually counterclockwise lowers the piston (2), and causes the seal created by the seal (1) to be interrupted, thus allowing the condensate to drain out.

• When pressure inside the bowl is released:

Even when pressure inside the bowl ① is released, the weight of the float ② causes the valve ④, which is connected to the lever ③, to seal the valve seat ⑤. As a result, the inside of the bowl ① is shut off from the outside air. Therefore, even if there is an accumulation of

condensate in the bowl (1), it will not drain out.

• When pressure is applied inside the bowl:

Even when pressure is applied inside the bowl (1), the weight of the float (2) and the differential pressure that is applied to the valve (4) cause the valve (4) to seal the valve seat (5), and the outside air is shut off from the inside of the bowl (1).

• When there is an accumulation of condensate in the bowl:

The float 2 rises due to its own buoyancy and the seal at the valve seat 5 is interrupted.

The condensate inside the bowl 1 drains out through the knob 6.

Turning the knob (6) manually counterclockwise lowers it and causes the sealing action of the valve seat (5) to be interrupted, which allows the condensate to drain out.

Air Filter AF10-A to AF60-A Series

Operating State and Proper Use of Float Type Auto Drain

Note) For N.O. (Normally open) type, the drain discharge passage is open when pressure is not applied. For this reason, the drain exhaust port is not closed completely in a compressor with a small supply amount (less than 0.75 kW) and the air will ceaselessly blow out.

*10 O: For pipe thread type: NPT only

AF30-A to AF60-A).

The auto drain port comes with Ø 3/8" One-touch fitting (applicable to the AF30-A to AF60-A). *2 Drain guide is G 1/8 (applicable to the AF20-A) and G 1/4 (applicable to the AF30-A to AF60-A).

*3 Option B is not assembled and supplied loose at the time of shipment. Assembly of a bracket and 2 mounting screws.

*4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl.

Releasing the residual condensate before ending operations for the day is recommended.

*5 If the compressor is small (0.75 kW, discharge flow is less than 100 I/min [ANR]), air leakage from the drain cock may occur during start of operations. N.C. type is recommended

*6 Refer to chemical data on page 46 for chemical resistance of the bowl.

The combination of float type auto drain: C and D is not available. *7

*8 Without a valve function

*9 The combination of metal bowl: 2 and 8 is not available.

*10 For pipe thread type: NPT

*11 O: For pipe thread type: NPT only

to the element.

Caution
 Caution

1. When the bowl is installed on the mist separator (AFM30-A/AFM40-

A), or micro mist separator (AFD30-A/AFD40-A), install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

▲ Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units I precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Design/Selection

Warning

1. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

Design

A Caution

 Design the system so that the mist separator is installed in a pulsation-free location. The difference between internal and external pressure inside the element should be kept within 0.1 MPa, as exceeding this value could cause damage.

Selection

▲ Caution

SMC

- 1. Do not allow air flow that exceeds the rated flow. If the air flow is allowed outside the range of the rated flow even momentarily, drainage and lubricant may splash at the outlet side or cause damage to the component.
- 2. Do not use in a low pressure application (such as a blower). An F.R.L. unit has its own minimum operating pressure depending on the equipment and is designed specifically to function with compressed air. If used below the minimum operating pressure, a loss of performance and malfunction can occur. Please contact SMC if an application under such conditions cannot be avoided.

Set nut	AR12P-260S
Round type pressure gauge *2	G27-10-R1

*1 Assembly of a bracket and set nuts

*2 1.0 MPa pressure gauge

▲ Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Selection

\land Warning

1. Although exhaust of the residual pressure to the inlet side is possible when eliminating the inlet pressure, exhaust is not possible when the set pressure is 0.15 MPa or less.

Maintenance

M Warning

 When using the regulator between a solenoid valve and an actuator, check the pressure gauge periodically. Sudden pressure fluctuations may shorten the durability of the pressure gauge. A digital pressure gauge is recommended for such situation or as deemed necessary.

Mounting/Adjustment

\land Warning

- Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- **2**. Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

A Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
 - Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).
- 2. Pulsation will be generated when the difference between the inlet and the outlet pressure is large. In this case, reduce the pressure difference between the inlet and the outlet. Please consult with SMC if the pulsation problem is not resolved.

AR AFM / AFD

AF

SMC \$

• With the backflow function, it incorporates a mechanism to exhaust the air pressure in the outlet side reliably and quickly.

*4 Including one O-ring and 2 mounting screws. []: Pressure gauge cover only

*5 In addition to the pressure switch body, lead wire with connector (2 m), adapter, lock pin, O-ring (1 pc.), mounting screw (2 pcs.) are attached.

[]: Switch body only. (Regarding how to order the digital pressure switch, refer to the Web Catalogue.)

▲ Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Selection

Warning

 Residual pressure disposal (outlet pressure removal) is not possible for the AR20-B to AR60-B even though the inlet pressure is exhausted. When the residual pressure disposal is performed, use the regulator with a backflow function (AR20K-B to AR60K-B).

Maintenance

A Warning

 When using the regulator with backflow function between a solenoid valve and an actuator, check the pressure gauge periodically. Sudden pressure fluctuations may shorten the durability of the pressure gauge. A digital pressure gauge is recommended for such situation or as deemed necessary.

Mounting/Adjustment

M Warning

- **1.** Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- **2.** Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

A Caution

- 1. Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
 - Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).

2. A knob cover is available to prevent careless operation of the knob. Refer to page 112 for details.

AR10-A Series AR20K-B to AR60K-B Series

Working Principle (Regulator with Backflow Function)

When the inlet pressure is higher than the regulating pressure, the check valve operates as a normal regulator (Figure 1). When the inlet pressure is shut off and exhausted, any inlet pressure applied to the valve ① will be lost. The force for seating the valve ① is the valve spring force ② only. When the valve ① is opened using the outlet force, the outlet pressure will be exhausted at the inlet side (Figure 2). When the set pressure is 0.15 MPa or less, the valve ① may not open due to the valve spring ② force.

When the inlet pressure is higher than the regulating pressure, the check valve (2) closes and operates as a normal regulator (Figure 1). When the inlet pressure is shut off and released, the check valve (2) opens and the pressure in the diaphragm chamber (1) is released into the inlet side (Figure 2). This lowers the pressure in the diaphragm chamber (1) and the force generated by the spring (3) lifts the diaphragm. The valve (4) opens through the stem, and the outlet pressure is released to the inlet side (Figure 2).

3 0.4 MPa Setting

≜Caution

• The AR10 comes with a backflow function as a standard feature. When using the AR10 as with backflow function, backflow may

not occur with the set pressure of 0.15 MPa or less.

The maximum set pressure is 0.4 MPa. When a pressure gauge is included, the display will show a range from 0 to 0.4 MPa.

Specifications

Made-to-order part no.	-X406
Proof pressure [MPa]	1.5
Maximum operating pressure [MPa]	1.0
Set pressure range [MPa]	0.05 to 0.4

Working Principle: AL10

85

A portion of the air introduced from the IN side pressurises the lubricant inside the bowl. The remainder of the air passes through the needle (9), and flows to the OUT side. The differential pressure between the inside of the bowl and the inside of the sight dome 2, causes the lubricant inside the bowl into the oil passage 10. The lubricant drips from the dripping tube 10, and lubricates the OUT side. The amount of lubricant is adjusted by the needle (9) on the front face. Turning the needle clockwise increases the amount of the lubricant, and turning it counterclockwise until fully open shuts off the lubricant. The needle on the side that is not used should be left fully open.

Lubricator AL10-A to AL60-A Series

▲ Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units I precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Selection

∕∆Warning

- 1. Do not introduce air from the outlet side as this can damage the bumper.
- 2. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

Type	Chemical name	Application examples	Material		
Туре	Chemical hame	Application examples	Polycarbonate	Nylon	
Acid	Hydrochloric acid Sulfuric acid, Phosphoric acid Chromic acid	Acid washing liquid for metals	Δ	×	
Alkaline	Sodium hydroxide (Caustic soda) Potash Calcium hydroxide (Slack lime) Ammonia water Carbonate of soda	Degreasing of metals Industrial salts Water-soluble cutting oil	×	0	
Inorganic salts	Sodium sulfide Potassium nitrate Sulfate of soda	_	×	Δ	
Chlorine solvents	Carbon tetrachloride Chloroform Ethylene chloride Methylene chloride	Cleansing liquid for metals Printing ink Dilution	×	Δ	
Aromatic series	Benzene Toluene Paint thinner	Coatings Dry cleaning	×	Δ	
Ketone	Acetone Methyl ethyl ketone Cyclohexane	Photographic film Dry cleaning Textile industries	×	×	
Alcohol	Ethyl alcohol IPA Methyl alcohol	Antifreeze Adhesives	Δ	×	
Oil	Gasoline Kerosene	_	×	0	
Ester	Phthalic acid dimethyl Phthalic acid diethyl Acetic acid	Synthetic oil Anti-rust additives	×	0	
Ether	Methyl ether Ethyl ether	Brake oil additives	×	0	
Amino	Methyl amino	Cutting oil Brake oil additives Rubber accelerator	×	×	
Others	Thread-lock fluid Seawater Leak tester	—	×	Δ	

When the above factors are present, or there is some doubt, use a metal bowl for safety.

Selection

▲Caution

1. Use a check valve (AKM series) to prevent back flow of the lubricant when redirecting the air flow before the lubricator.

Maintenance

⚠Warning

- For the AL10-A/AL20-A, replenish the lubricant after releasing the inlet pressure. Lubrication cannot take place under a pressurised condition.
- 2. Adjustment of the oil regulating valve for models from the AL20-A to AL60-A should be carried out manually. Turning it counterclockwise increases the dripping amount, and turning it clockwise reduces the dripping amount. The use of tools etc. can result in damage to the unit. From the fully closed position, three rotations will bring it to the fully open position. Do not rotate it any further than this. Note that the numbered scale markings are guidelines for adjusting the position, and not indicators of the dripping amount.

Caution

1. Check the dripping amount once a day. Drip failure can cause damage to the components that need lubrication.

Mounting/Adjustment

Caution

1. When the bowl is installed on the AL30-A to AL60-A, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

No indication is necessary for Rc thread; however, indicate N for NPT thread, and F for G thread. (For auto drain, —: Ø 10, N: Ø 3/8") Please consult with SMC separately for psi and °F unit display specifications.
Filter Regulator AW20-B to AW60-B Series

Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units I precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual", http://www.smc.eu

Design/Selection

\land Warning

- Residual pressure disposal (outlet pressure removal) is not possible for the AW20-B to AW60-B even though the inlet pressure is exhausted. When the residual pressure disposal is performed, use the filter regulator with backflow function (AW20K-B to AW60K-B).
- 2. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

Maintenance

\land Warning

 Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting/Adjustment

Marning

- 1. Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- **2.** Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

A Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
 - Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).
- A knob cover is available to prevent careless operation of the knob. Refer to page 112 for details.
- When the bowl is installed on the AW30-B to AW60-B, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Pressure Characteristics (Representative values)

AW20(K)-B

SMC

AW60(K)-B

Construction

Working Principle (Filter Regulator with Backflow Function)

When the inlet pressure is higher than the regulating pressure, the check valve operates as a normal regulator (Figure 1). When the inlet pressure is shut off and exhausted, any inlet pressure applied to the valve ① will be lost. The force for seating the valve ① is the valve spring force ② only. When the valve ① is opened using the outlet force, the outlet pressure will be exhausted at the inlet side (Figure 2). When the set pressure is 0.15 MPa or less, the valve ① may not open due to the valve spring ③ force.

*1 Bowl assembly includes the bowl O-ring.

Please consult with SMC separately for psi and °F unit display specifications.

*2 Bowl assembly for the AW30(K)-B to AW60(K)-B models comes with a bowl guard (Material: Polycarbonate).
*3 Check valve assembly is applicable for a filter regulator with backflow function (AW20(K)-B to AW60(K)-B) only.

Assembly of a check valve cover, check valve body assembly and 2 mounting screws

Working Principle (Filter Regulator with Backflow Function)

AW20K-B to AW60K-B

When the inlet pressure is higher than the regulating pressure, the check valve 2 closes and operates as a normal regulator (Figure 1). When the inlet pressure is shut off and released, the check valve 2 opens and the pressure in the diaphragm chamber 1 is released into the inlet side (Figure 2). This lowers the pressure in the diaphragm chamber (1) and the force generated by the spring (3) lifts the diaphragm. The valve ④ opens through the stem, and the outlet pressure is released to the inlet side (Figure 2).

*14 ○: For pipe thread type: NPT only
*15 △: Select with options: E1, E2, E3, E4.

5 Clean Series

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

Standard model no.

Please contact SMC if a product with pressure gauge is desired.

Clean Series

6 Copper, Fluorine and Silicone-free + Low Particle Generation

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

21 - Standard model no.

Copper, fluorine and silicone-free + Low particle generation

Prevents careless knob operation.

Lock (supplied by users)

Part no.	Applicable model
AR20P-580AS	AC20□-B, AR20(K)-B, AW20(K)-B
AR25P-580AS	AC25□-B, AR25(K)-B
AR30P-580AS	AC30□-B, AR30(K)-B, AW30(K)-B
AR40P-580AS	AC40□(-06)-B, AR40(K)(-06)-B, AW40(K)(-06)-B

SMC

▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

I

etc.

Caution indicates a hazard with a low level of risk **▲** Caution: which, if not avoided, could result in minor or moderate injury.

Warning indicates a hazard with a medium level of risk \triangle Warning: which, if not avoided, could result in death or serious injury.

Danger indicates a hazard with a high level of risk A Danger : Which, if not avoided, will result in death or serious injury. ------

🗥 Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3.Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
 - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
 - 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation

A Caution

1. The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary

If anything is unclear, contact your nearest sales branch.

*1) ISO 4414: Pneumatic fluid power - General rules relating to systems. ISO 4413: Hydraulic fluid power - General rules relating to systems. IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements) ISO 10218-1: Manipulating industrial robots - Safety.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements". Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, wichever is first.*2)
- Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products

*2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed

/ACaution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

✓ Safety Instructions Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.
