

Microwave

Shashel®

Microwave Shashel® «Pro»

Characteristics:

Material - aluminum, stainless steel
The area treated surface - 300x300 mm
Power(frequency) - 1.5 kW (2450 MHz)
Mode - cyclic
Supply voltage - stabilized 230 V, 50-60 Hz
Remote Control - 15 meters
Relocation of the emitter from the power supply - 4 meters
Made according to - ISO 9001:2008 / CE

Tripod for «Pro»

Characteristics:

Material: painted steel

Altitude: 4m

Microwave Shashel® «Base»

Characteristics:

Material - aluminum,
stainless steel

The area treated surface -
300x300 mm

Power(frequency) -
1.5 kW (2450 MHz)

Mode - cyclic

Supply voltage -
stabilized 230 V, 50-60 Hz

Remote Control - 15 meters

Made according to -
ISO 9001:2008 / CE

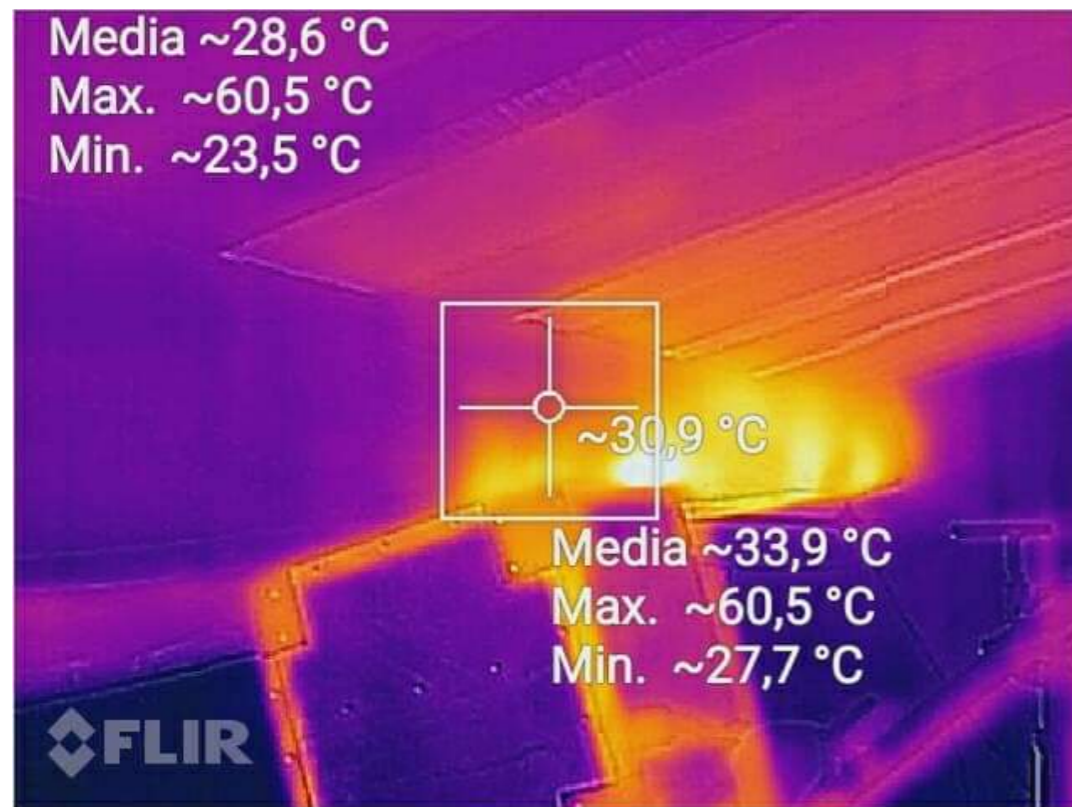

Why Shashel®?

We were frustrated with the catastrophic destruction caused by infestations of wood boring insects, and worms. The cost to repair and maintain wooden structures - buildings, log cabins, furniture - is astronomical. When we went looking for a solution to eliminate these pests, all we found were treatments based on harsh and toxic chemicals.

There had to be a better way. We went looking for a solution that met these goals; it had to be environmentally friendly, without the use of harsh chemicals, had to be easy to use and completely safe. We developed the perfect solution through the use of Microwave Technology. With the use of Microwave technology, you can now control insect infestations easily and safely. Another major benefit is the elimination of fungus and dry rot.

The Shashel Microwave device emits electromagnetic waves which stimulates the water molecules in the wood, slightly raising the temperature to 50°-60° C (120°-140° F) killing any insects and worms in the wood. Is; it had to be environmentally friendly, without the use of harsh chemicals, had to be easy to use and completely safe. We developed the perfect solution through the use of Microwave Technology. With the use of Microwave technology, you can now control insect infestations easily and safely. Another major benefit is the elimination of fungus and dry rot.
