4.Watch Videos(Supported browsers, PC client, mobile client, for example the following figure to phone).

## AP way to see the video method

### 1.Connected network cameras

1). Installing WiFi antenna. Tightening and antenna erected vertically, as shown in

2).Switched network camera (IPC) Power.

3), AP Access: by scanning the bar code at the bottom of the machine or the LAN search, add AP cameras, after successfully added and click Set button WiFi setup on the right side of the main menu in the video list, the Wifi connection is successful, that is to achieve the success of the camera and WiFi LAN connection

After connecting the power of the network camera, it becomes AP hotspot.In "mobile wireless conection" find the same name equipment as the SSID under the bottom of the camera, and enter the password to complete access to the phone

Select "Scan Barcode" or "Search" to add this camera

Click on any of the list on the right side of the camera settings button Set the connection WiFi router, this camera can be added to the Internet, You can watch anytime, anywhere via the Internet of this camera.
