SLYDRING® - WEAR RINGS

Your Partner for Sealing Technology

**Busak+Shamban**

## Your Partner for Sealing Technology

Busak+Shamban is a major international sealing force, uniquely placed to offer dedicated design and development from our market leading product and material portfolio; a one-stop shop providing the best in elastomer, thermoplastic, PTFE and composite technologies for applications in aerospace, industrial, and automotive industries.

With 50-years experience, Busak+Shamban engineers support customers with design, prototyping, production, test and installation using state-of-the-art design tools. An international network of over 60 facilities worldwide includes 32 manufacturing sites, strategically positioned research and development centres, including materials and development laboratories and locations specialising in design and applications.

Developing and formulating materials in-house, we utilise the resource of our material database, including over 2,000 proprietary compounds and a range of unique products.

Busak+Shamban fulfil challenging service requirements, supplying standard parts in volume or a single custom-manufactured component, through our integrated logistical support, which effectively delivers over 40,000 sealing products to customers worldwide.

Facilities are certified to ISO 9001:2000 and ISO/TS 16949:2002, with many manufacturing sites also working to QS9000 and VDA 6.1. Busak+Shamban, as the global sales and marketing organisation of Trelleborg Sealing Solutions, is backed by the experiences and resources of one of the world's foremost experts in polymer technology, Trelleborg AB.

**ISO 9001:2000**

**ISO/TS 16949:2002**

The information in this brochure is intended to be for general reference purposes only and is not intended to be a specific recommendation for any individual application. The application limits for pressure, temperature, speed and media given are maximum values determined in laboratory conditions. In application, due to the interaction of operating parameters, maximum values may not be achieved. It is vital therefore, that customers satisfy themselves as to the suitability of product and material for each of their individual applications. Any reliance on information is therefore at the user's own risk. In no event will Busak+Shamban be liable for any loss, damage, claim or expense directly or indirectly arising or resulting from the use of any information provided in this brochure. While every effort is made to ensure the accuracy of information contained herewith, Busak+Shamban cannot warrant the accuracy or completeness of information.

**To obtain the best recommendation for a specific application, please contact your local Busak+Shamban marketing company.**

This edition supersedes all previous brochures.

### ■ Choice of Slydring®

The function of Slydring® is to guide the piston and piston rod of a hydraulic cylinder and to absorb the transverse forces which occur. At the same time, metallic contact between the sliding parts of the cylinder, e.g. piston and cylinder barrel or rod and cylinder head, must be prevented. Non-metallic guide rings offer major benefits compared with the traditional metallic guides:

- Cost efficient production
- High load bearing capacity
- Eliminates local stress concentrations
- Wear-resistant, long service lives
- Metal/plastic pairing eliminates fretting and seizure
- Favourable friction behaviour
- Damping of mechanical vibrations
- Good wiping effect, embedding of foreign particles possible
- Protection of the seal against "dieseling"
- Free choice of material of the metal components as guiding properties are no longer required
- Eliminates hydrodynamic pressure problems in the guide system
- Simple closed groove, easy installation
- Low service costs

### Materials

In view of the different specific demands made on piston and rod guides, various Slydring® materials are available:

- Highly wear-resistant, low friction, specially modified Turcite® materials for low to medium duty with limited radial forces
- HiMod® materials with friction-reducing fillers for medium to heavy duty
- Luytex® fabric composite materials for heavy duty and high radial forces

In order to choose the most suitable Slydring®, it is first necessary to know all the required functional parameters. Table I can be used to make an initial preselection of the Slydring® and the materials to meet the demands of the application.

Before the final choice of Slydring® and material is made, the details and information must be checked in the relevant data sheets of Slydring® materials.

In principle, piston Slydring® and rod Slydring® are interchangeable if the difference in size is taken into consideration, e.g. piston ring, diameter 100 x 2.5 mm thick can be used as a piston rod Slydring® diameter 95 x 2.5 mm thick. Depending on the material and dimensions of the Slydring®, the thickness tolerance is in the range of +0 to -0.08 mm.

Please do not hesitate to contact our Technical Department for further information on specific applications and special technical questions.

**Table I Selection Criteria for Slydring®**

Slydring®		Application				Standard <sup>1)</sup>	Installation	Material

1) For Slydring® to other standards, e.g to French standard NF E 48-037, please contact us.  
 2) Segments made from strip material can be used for larger diameters.

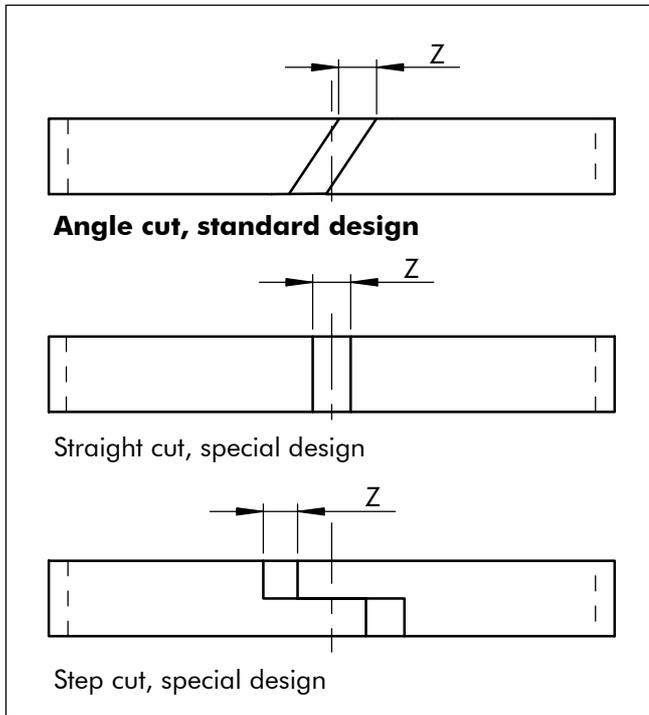

# Slydring® - Wear Ring

## Forms of Supply

Two characteristics must be observed with respect to the forms of supply for Slydring®:

- Type of cut

Figure 1 shows the angle cut which are the most frequently used standard type of cut. Rings with other types of cut are available on request. Design Code as shown in Table III.

- Design type

Slydring® have a rectangular cross-section with rounded or chamfered edges, thus preventing impermissible edge forces in the corner radii of the grooves. The chamfers also serve to facilitate installation, e.g. when inserting into the cylindrical tube or guide bush.

Slydring® are supplied ready to fit with the gap necessary (dimension Z) for their function. The ring ends are finished as standard with an angle cut.

For further details, please refer to Table II.

Slydring® are depending on material supplied as split rings and/or as strip material.

Strip material is available in rolls or precut to size as listed in Table II.

**Table II Forms of Supply for Slydring®**

Material	Ring Diameter mm	Cut Strip for Diameter mm	Off-the-Roll
Turcite® T47/T51/T59	-	8 - 4200	See Table V
Zurcon® Z80	on request	30 - 4200	on request
Luytex® C320/C380	16 - 1600	300 - 2000	see page 44
Luytex® C932	16 - 500	-	-
HiMod® HM061	up to 300	-	-
HiMod® HM062	up to 300	-	-
HiMod® HM063	up to 300	-	-

\* Design Code for **Turcite®** Slydring® with teardrop structure on both sides - which is standard up to and including **3 mm** radial thickness "W". See Ordering Examples.

\*\* HiMod® Wear Rings for non ISO groove dimensions have as standard a straight cut Code D.

Teardrop structure: A detailed description can be found on page 9.

## ■ Design Instructions

### Selection of Slydring®

An initial choice can be made for various application by checking the Selection Criteria for Slydring® in Turcite®, Zurcon®, HiMod® or Luytex®, see Table I and the pages 10, 11, 20, 21 and 43.

The values for the load on the Slydring® are valid for a load distribution as illustrated in Figure 2. The flexibility of the materials ensures a relatively constant specific load, irrespective of the size of the radial forces F, as with increasing radial loading, the guide surface subjected to the load increases also.

The radial forces which occur can vary within wide ranges and cannot always be calculated exactly in advance. For such cases, a safety factor of at least 2 is recommended when calculating (see calculation example).

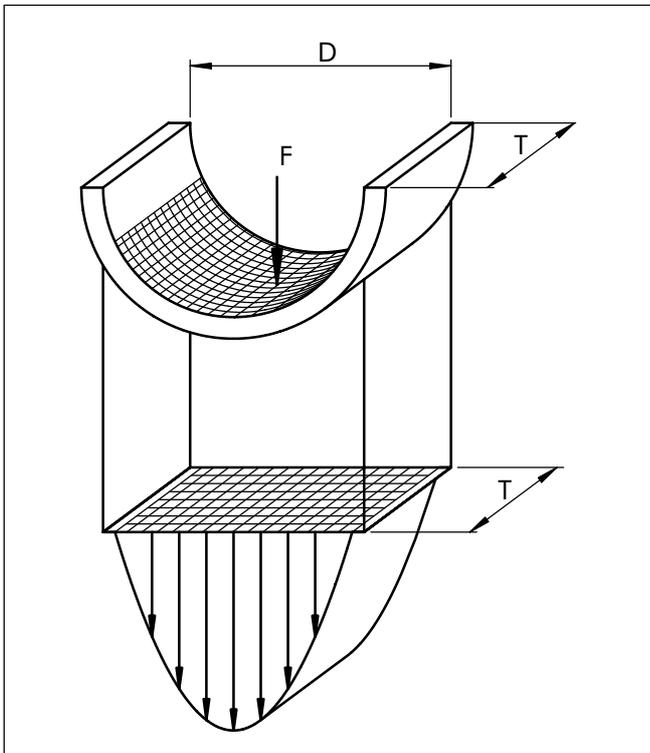

Figure 2 Load distribution

The large effective bearing area of non-metallic Slydring® gives low maximum contact pressure.

### Dimensioning of Slydring®

The radial bearing pressure and the resulting elastic deflection are important parameters in the design of the Slydring®. The radial offset resulting from the dimensional tolerances, deflection and wear should always be less than the smallest gap to be sealed by the system.

On request, we are willing to carry out dimensioning calculations for specific applications.

A rough estimate of the number and width of Slydring® required can be calculated using the following formula:

$$\text{Slydring}^{\circledR} \text{ width } T_{\text{total}} = \frac{F \times f}{d_N \times Pr}$$

where:

F = Maximum radial load [N]

f = Safety factor

$d_N$  = Rod diameter [mm]

Pr = Radial Slydring® pressure [N/mm<sup>2</sup>]

Example:

$d_N$  = 60 mm

F = 40.000 N

t = 40 °C

f = 2

Slydring® material Luytex® C 380

Pr<sub>per.</sub> 100 N/mm<sup>2</sup>

$$T_{\text{total}} = \frac{40.000 \times 2}{60 \times 100} = 13.3 \text{ mm}$$

From Table IV, a groove with a width of 15 mm or 2 grooves with widths of 9.7 mm are selected. The installation of two strips is recommended as this gives a wider guide length.

Selected:

2 strips Series GR69 with a groove width  $L_2 = 9.7 \text{ mm}$

# Slydring® - Wear Ring

The standard installation arrangement for pistons and rods is shown in Figures 3 and 4.

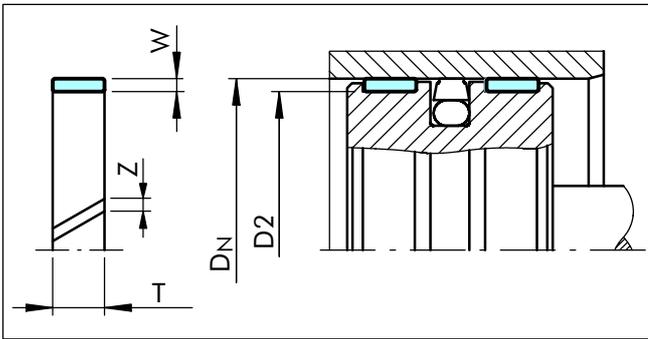

Figure 3 Piston guide

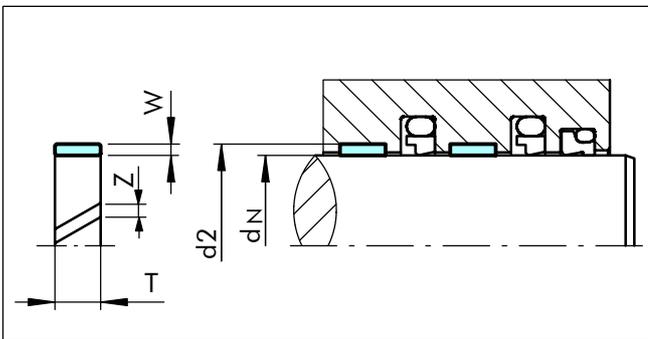

Figure 4 Rod guide

To further improve the operational safety, particularly under high loads, the installation of a 3rd strip made of material Turcite® T47 is recommended. It is installed on the oil side and serves eg as an internal scraper.

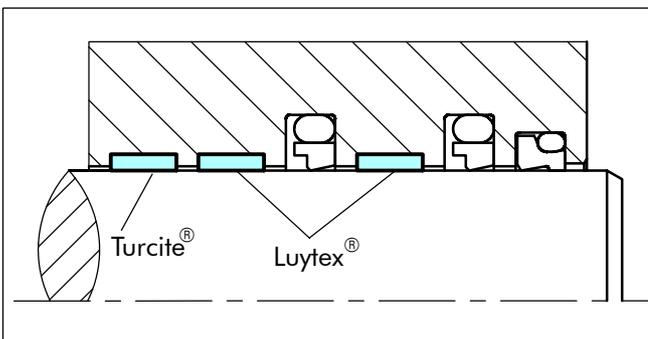

Figure 5 Rod guide for high loads  
(See also Figure 15)

## Calculation of the Linear Length

The linear length of Turcite® and Luytex® Slydring® are calculated such that a gap "Z" is created at the ends of the strip after installation (see Figure 3 and 4). This is required for the following reasons:

- Compensation of the linear expansion of the strips due to the effects of temperature
- Avoidance of intermediate pressures and entrained pressures.

When ordering strips off-the-roll for manufacturing of Slydring® in your own works, the length of the strip can be calculated using the following formulae:

Piston Slydring®:

$$L = c \times (D_N - W) - k \text{ [mm]}$$

Rod Slydring®:

$$L = c \times (d_N + W) - k \text{ [mm]}$$

$D_N$  = Bore diameter [mm]

$d_N$  = Rod diameter [mm]

$W$  = Ring thickness [mm]

$c$  = 3.11 material factor, valid for all materials

$k$  = Temperature constant:  
0.8 for all materials.

2.0 only for Turcite® materials for applications  
> 120° C.

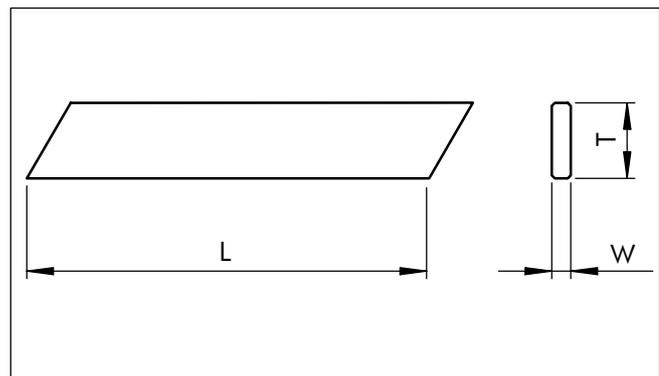

Figure 6 Cut length

## ■ Turcite® Slydring® for Piston and Rod

### Description

Turcite® Slydring® are used as piston and rod guides due to their outstanding friction behaviour, stick-slip free running and good resistance to high temperatures and chemicals.

Slydring® are available as off-the-roll materials for cutting to length in the users works as listed in Table V. Sections cut to size ready for installation is available for rod and piston diameters according to Table II.

Slydring® have a geometrically rectangular cross-section and are chamfered at the edges for easy installation into the grooves.

- Teardrop structure

Slydring® up to and including 3 mm radial thickness in Turcite® materials are as standard supplied with "teardrop" structure on the sliding surfaces. This structure comprises small lubricant pockets on the surface which improve the initial lubrication and promote the formation of a lubricant film. They also help to protect the seal system through their ability to embed any foreign particles. In order to be able to use the strip material for both piston and piston rod guides, the rings have this same teardrop structure on both sides.

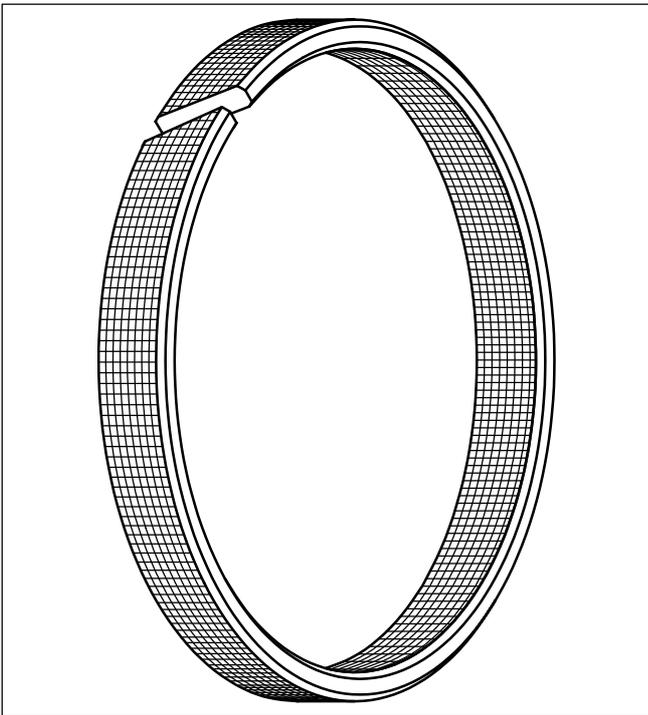

Figure 7 Turcite® Slydring® with teardrop structure

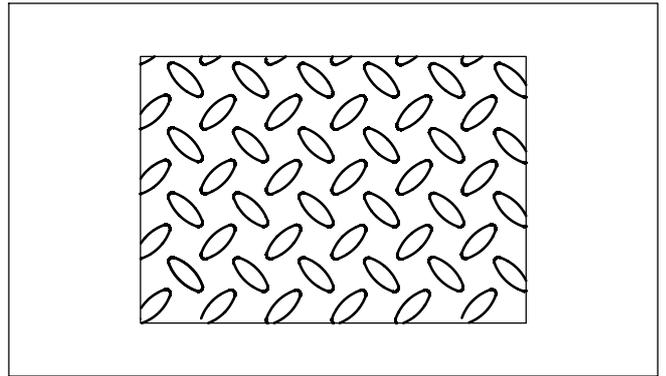

Figure 8 Teardrop structure for Turcite® Slydring®

Slydring® can also be delivered without teardrop structure. In this case, this must be indicated in the Order No. (see Design Code for cut/type in Table III).

### Advantages

- Outstanding lubrication conditions further improved by the Teardrop structure
- No stick-slip effect when starting for smooth operation even at very low speeds
- Minimum static and dynamic friction coefficient for low operating temperature and energy loss
- Suitable for non lubricating fluids depending on Turcite® material for optimum design flexibility
- High wear resistance ensures long service life
- Installation grooves according to ISO 10766
- Suitable for most hydraulic fluids in relation with the majority of modern hardware materials and surface finish depending on material selected.
- Suitable for new environmentally safe hydraulic fluids
- The embedding of foreign particles is enhanced
- Good damping effect, absorbs vibrations

# Turcite® Slydring® - Wear Ring

## Application Examples

The Turcite® Slydring® is successfully applied in demanding applications as a standard guiding element for hydraulic operated pistons, plus for piston rods with special requirements, in:

- Machine tools
- Injection moulding machines
- Press brakes
- Presses
- Robotics & Handling machinery
- Automation
- Positioning cylinders
- Servo hydraulics
- Piston accumulators
- Shock absorber
- Valves for hydraulic & pneumatic circuits
- Agriculture
- Chemical and Process Industry

## Technical Data

The Turcite® Slydring® with angle cut is recommended for reciprocating movements

Speed: up to 15m/s

Temperature: -60°C to +150°C (200°C)

Media: Mineral Oil based Hydraulic fluids, barely flammable hydraulic fluids, environmentally safe hydraulic fluids (biological degradable oils), water, air and others. Depending on the Turcite® material compatibility.

Clearance: The maximum permissible radial clearance  $s_{max}$  is depending on the actual sealing system.

Radial Slydring® pressure  $P_r$ :  
 Max. 15 N/mm<sup>2</sup> at 25°C  
 Max. 12 N/mm<sup>2</sup> at 80°C  
 Max. 8 N/mm<sup>2</sup> at 120°C

When calculating the width of Turcite® Slydring® it is recommended to use a safety factor  $f=2$  (see page 7).

With the Turcite® materials it must be taken into account that the permissible surface pressure decreases with increasing temperatures. The load bearing ability for dynamic applications in practice is dependent primarily on the operating temperature. This should therefore generally not exceed 150°C.

### Important Note:

The above stated limits for pressure and speed are maximum values individually. Friction heat generated by the combination of pressure and speed may cause local heat built-up. Care should be taken not to apply high values for pressure and speed at the same time.

## Materials

### Standard Application:

- For hydraulic components with reciprocating movement in mineral oils or medium with good lubricating performance. Low friction, high resistance to wear, heat and chemicals:

Turcite® T47 (bronze filled)

### Special Application:

- For lubricated and poor lubricated moving components: Water hydraulics and soft metal surfaces:

Turcite® T51 (carbon filled)

- For short stroke movements, non-lubricating fluids, water hydraulics, soft metal surfaces or pneumatic, applications requiring self-lubricating sealing materials:

Turcite® T59 (carbon fiber filled)

Dimensions in **bold** are suitable for installation in grooves to ISO 10766.

**Table V Turcite® Slydring® Length of the roll**

Turcite® T47, T51, T59 Length of the Roll	Ring Thickness W
23.0 m	1.55
13.5 m	2.50
7.0 m	4.00

Off-the-roll material can only be supplied as complete rolls.

## ■ Zurcon<sup>®</sup> Slydring<sup>®</sup> for Piston and Rod

### Zurcon<sup>®</sup> Z80

Z80 is a UHMW-PE (ultra high molecular weight polyethylene) material which meets the requirements in FDA 21 CFR 177:1520 and is therefore recommended for use in foodstuff applications. The material is also preferred for use in water hydraulics and pneumatics due to excellent friction and wear properties.

#### Advantages:

- Good lubrication and wear performance
- Self-lubricating
- Low friction value
- No water absorption
- In compliance with FDA
- Excellent resistance to chemicals
- High wear resistance.

#### Application Examples

- Water hydraulics
- Dry pneumatics
- Filling machines
- Food processing
- Medical equipment
- Ceramic coated hydraulics

#### Technical Data

Velocity, reciprocating: Max. 2.0 m/s

Temperature: -60°C to +80°C (100°C)

Radial Slydring<sup>®</sup>  
pressure Pr: Max. 25 N/mm<sup>2</sup> at 25°C  
Max. 10 N/mm<sup>2</sup> from 60°C to 80°C

When calculating the width of Zurcon<sup>®</sup> Slydring<sup>®</sup> it is recommended to use a safety factor f=2 (see page 7).

#### Important Note:

The above stated limits for pressure and speed are maximum values individually. Friction heat generated by the combination of pressure and speed may cause local heat built-up. Care should be taken not to apply high values for pressure and speed at the same time.

Zurcon<sup>®</sup> Z80 is not available as GP98, GP98X and GP99 (Thickness W=4.0 mm)

All sizes printed in bold type conform to ISO 10766 and should be preferred for use.

All intermediate sizes not contained in the table are available.

## Ordering Example

Slydring<sup>®</sup> for piston diameter  $D_N = 100.0$  mm  
 Series GP 69 from Table VIII  
 Groove width: 9.70 mm, ring thickness: 2.50 mm

Material: Turcite<sup>®</sup> T47  
 (other materials see Table I)

Standard design: With angle cut and teardrop structure  
 Design code: 0

Part No.: GP6901000 (from Table XI)

The Order No. can be formed from the example below.

Order No.	GP69	0	1000	-	T47
Serial No.					
Design code, standard					
Piston diameter x 10					
Quality Index (Standard)					
Material No.					

## Ordering Example for $D_N \geq 1000$ mm

Slydring<sup>®</sup> for bore diameter  $D_N = 2200.0$  mm  
 Series GP98X from Table VIII  
 Groove width: 25.00 mm, ring thickness: 4.00 mm

Part No.: GP98X2200 (from Table XI)

Order No.	GP98	X	2200	-	T47
Serial No.					
Design code					
Bore diameter x 1*					
Quality Index (Standard)					
Material No.					

\* For diameters  $\geq 1000.0$  mm multiply only by factor 1.

## ■ Installation Recommendation, Turcite® and Zurcon® Slydring® for Rod According to ISO 10766 Groove Dimension

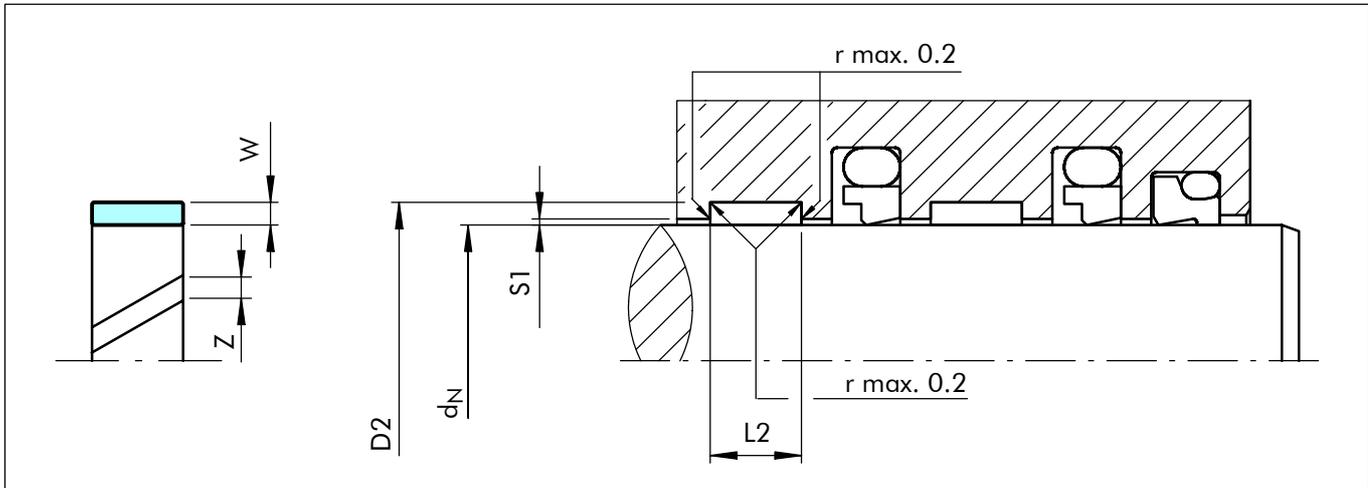

Figure 10 Installation drawing

**Table XII Installation Dimensions**

Serial No.	Rod Diameter <sup>1)</sup>	Groove Diameter	Groove Width	Ring Thickness	Ring Gap
	$d_N$ f8/h9	$D_2$ H8	$L_2 + 0.2$	$W$	$Z$
GR41	8 - 20.0	$d_N + 3.10$	2.50	1.55	Calculation of the linear length, see page 8.
GR43	10 - 50.0	$d_N + 3.10$	4.00	1.55	
GR65	15 - 140.0	$d_N + 5.00$	5.60	2.50	
GR69	20 - 220.0	$d_N + 5.00$	9.70	2.50	
GR73	80 - 400.0	$d_N + 5.00$	15.00	2.50	
GR75	200 - 999.9	$d_N + 5.00$	25.00	2.50	
GR75X	1000-4200.0	$d_N + 5.00$	25.00	2.50	
GR98	280 - 999.9	$d_N + 8.00$	25.00	4.00	
GR98X	1000-2200.0	$d_N + 8.00$	25.00	4.00	

<sup>1)</sup> Recommended diameter ranges.

For Slydring® to other standards, e.g French standard NF E 48-037, please contact us.

**Table XIII Radial Clearance S1<sup>2)</sup>**

Rod Dia. $d_N$	S1 min.	S1 max.
8 - 20	0.20	0.30
20 - 100	0.25	0.40
101 - 250	0.30	0.60
251 - 500	0.40	0.80
501 - 1000	0.50	1.10
>1001	0.60	1.20

<sup>2)</sup> Specifications valid only in the area of the Slydring®, but not for the seal area.

**Table XIV Surface Roughness**

Parameter	Mating Surface $\mu\text{m}$		Groove Surface $\mu\text{m}$
	Turcite® Materials	Zurcon® Materials	
$R_{\text{max}}$	0.63 - 4.00	1.00 - 4.00	< 16.0
$R_z$ DIN	0.40 - 2.50	0.63 - 2.50	< 10.0
$R_a$	0.05 - 0.40	0.10 - 0.40	< 2.5

Zurcon<sup>®</sup> Z80 is not available as GR98 and GR98X (Thickness W=4.0 mm)

All sizes printed in bold type conform to ISO 10766 and should be preferred for use.

All intermediate sizes not contained in the table are available upon request.

The Order No. can be formed from the example below.

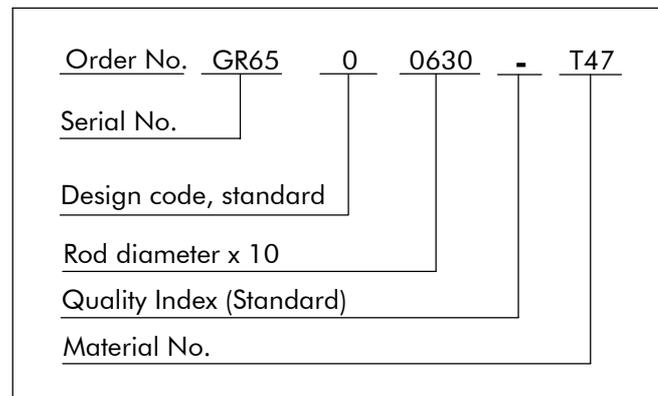

### Ordering Example

Slydring<sup>®</sup> for rod diameter  $d_N = 63.0$  mm  
 Series GR 65 from Table XII  
 Groove width: 5.60 mm, ring thickness: 2.50 mm

Material: Turcite<sup>®</sup> T47  
 (other materials see Table I)

Standard design: With angle cut and teardrop structure  
 Design code: 0

Part No.: GR6500630 (from Table XV)

## Ordering Example for $d_N \geq 1000$ mm

Slydring<sup>®</sup> for rod diameter  $d_N = 2600.0$  mm

Series GR75X from Table XII

Groove width: 25.00 mm, ring thickness: 2.50 mm

Part No.: GR75X2600 (from Table XV)

Order No.	GR75	X	2600	-	T47
Serial No.					
Design code					
Rod diameter x 1*					
Quality Index (Standard)					
Material No.					

\* For diameters  $\geq 1000.0$  mm multiply only by factor 1.

## ■ HiMod<sup>®</sup> Slydring<sup>®</sup> for Piston and Rod

### Description

HiMod<sup>®</sup> Slydring<sup>®</sup> are made in special, modified thermo-plastic material and can be used in hydraulic cylinders for medium to high loads. Three different grades of material are available:

HiMod<sup>®</sup> HM061: A special glass fibre reinforced polyacetal

HiMod<sup>®</sup> HM062: A special glass fibre reinforced heat-stabilised polyamid with PTFE filler

HiMod<sup>®</sup> HM063: A special glass fibre reinforced heat-stabilised polyamid

Slydring<sup>®</sup> in material HM061, HM062 and HM063 are injection moulded to finish parts (mould necessary), a wide range of standard sizes (see Tables XXI and XXVII) are available.

Old ref. description in HM061

Polypac: PO (POM/GL/BK)

Sealing Parts: POG2 (Wearite)

### Application Examples

HiMod<sup>®</sup> Slydring<sup>®</sup> (HM061, 062, 063) is generally utilised in a wide range of hydraulic equipment such as:

- Standard hydraulic cylinder, medium range
- Truck tail lift
- Telescopic cylinders
- Truck cranes
- Forklift truck
- Stabiliser cylinders
- Agriculture equipment
- Construction machinery

### Materials

#### HiMod<sup>®</sup> HM061

HiMod<sup>®</sup> HM061 is a polyacetal (POM) based material with glass fibres.

#### Advantages:

- Favourable price/performance ratio
- High compressive strength
- Easy installation on pistons and glands (gland bore > 40 mm)
- High wear resistance
- Water absorption 0.2 %
- High stiffness.

#### Technical Data

Velocity, reciprocating: Max. 0.8 m/s

Temperature: -40°C to +110°C

Radial Slydring<sup>®</sup>  
pressure Pr: Max. 40 N/mm<sup>2</sup> at 25°C  
Max. 25 N/mm<sup>2</sup> >60°C

When calculating the width of HiMod<sup>®</sup> Slydring<sup>®</sup> it is recommended to use a safety factor  $f=2$  (see page 7).

#### Important Note:

The above stated limits for pressure and speed are maximum values individually. Friction heat generated by the combination of pressure and speed may cause local heat built-up. Care should be taken not to apply high values for pressure and speed at the same time.

## HiMod<sup>®</sup> HM062

HM062 is a polyamid (PA 66) based material with glass fibres and PTFE filler. The material is heat stabilised.

### Advantages:

- Good price/performance ratio
- High compressive strength even at high temperatures
- High wear resistance
- Easy installation on pistons and glands (gland bore > 30 mm)
- Low friction
- For operation under poor lubrication.

### Technical Data

Velocity, reciprocating:	Max. 1.0 m/s
Temperature:	-40°C to +130°C
Radial Slydring <sup>®</sup> pressure Pr:	Max. 75 N/mm <sup>2</sup> at 60°C Max. 40 N/mm <sup>2</sup> >60°C

When calculating the width of HiMod<sup>®</sup> Slydring<sup>®</sup> it is recommended to use a safety factor f=2 (see page 7).

### Important Note:

The above stated limits for pressure and speed are maximum values individually. Friction heat generated by the combination of pressure and speed may cause local heat built-up. Care should be taken not to apply high values for pressure and speed at the same time.

## HiMod<sup>®</sup> HM063

HM063 is a polyamid (PA 66) based material with glass fibres. The material is heat stabilised.

### Advantages:

- Good price/performance ratio
- High compressive strength even at high temperatures
- High wear resistance
- Easy installation on pistons and glands (gland bore > 30 mm)
- Low friction

### Technical Data

Velocity, reciprocating:	Max. 1.0 m/s
Temperature:	-40°C to +130°C
Radial Slydring <sup>®</sup> pressure Pr:	Max. 75 N/mm <sup>2</sup> at 60°C Max. 40 N/mm <sup>2</sup> >60°C

When calculating the width of HiMod<sup>®</sup> Slydring<sup>®</sup> it is recommended to use a safety factor f=2 (see page 7).

## Installation Recommendation, HiMod® Slydring® for Piston According to ISO 10766 Groove Dimension

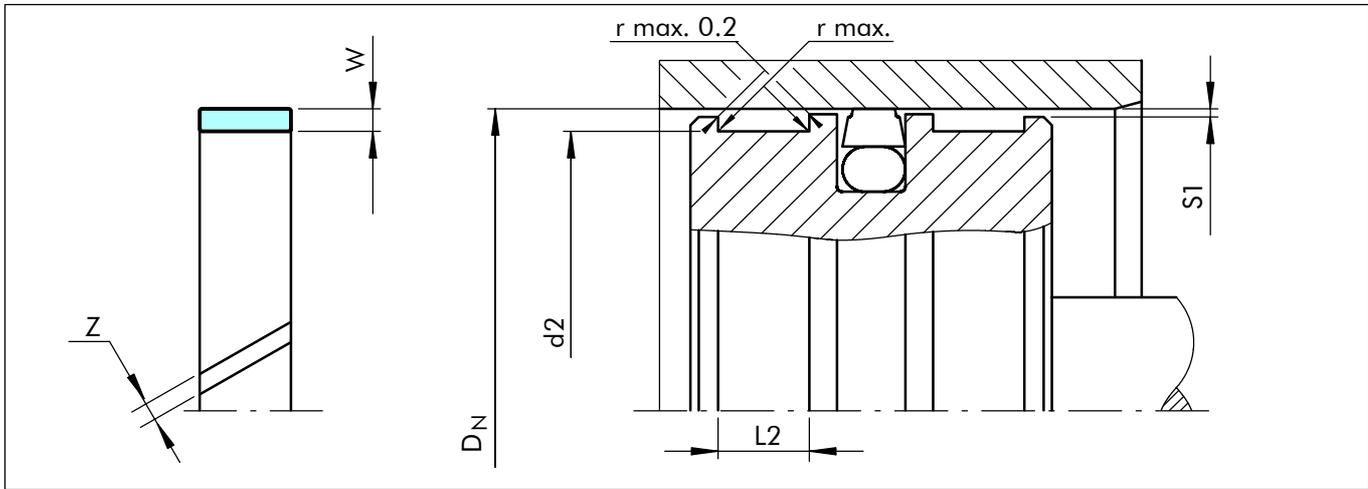

Figure 11 Installation drawing

**Table XVI Installation Dimensions**

Serial No.	Bore Diameter <sup>1)</sup>	Groove Diameter	Groove Width	Ring Thickness
	$D_N$ H9	$d_2$ h8	$L_2 + 0.2$	$W$
GP43	10 - 50.0	$D_N - 3.10$	4.00	1.55
GP65	16 - 140.0	$D_N - 5.00$	5.60	2.50
GP69	60 - 220.0	$D_N - 5.00$	9.70	2.50
GP73	130 - 300.0	$D_N - 5.00$	15.00	2.50

## Ordering Example

Slydring<sup>®</sup> for bore diameter  $D_N = 100.0$  mm  
 Series GP69 from Table XVI  
 Groove width: 9.70 mm, ring thickness: 2.50 mm

Material: HiMod<sup>®</sup> HM061  
 (other materials see Table I)

Standard design: With angle cut  
 Design code: 0

Order No.: GP6901000-HM061 (from Table XXI)

Order No.	GP69	0	1000	-	HM061
Serial No.					
Design code, standard					
Bore diameter x 10					
Quality Index (Standard)					
Material No.					

## Note

HM062 and HM063 materials can be ordered by replacing the HM061 material code in the Order Number.

Please check with your local B+S entity the availability and price of the HM062 or HM063. These materials may require new moulds.

## HiMod<sup>®</sup> Slydring<sup>®</sup> - Wear Ring

### Ordering Example

For Polypac Slydring<sup>®</sup> Ref. No. E/DWR 20/2

Bore diameter  $D_N = 20.0$  mm

Groove width: 9.70 mm, ring thickness: 2.00 mm

Material: HM061

Standard design: With straight cut  
Design code: D

Order No.	GP49	D	0200	-	HM061
Serial No.					
Design code, standard					
Bore diameter x 10					
Quality Index (Standard)					
Material No.					

### Note

HM062 and HM063 materials can be ordered by replacing the HM061 material code in the Order Number.

Please check with your local B+S entity the availability and price of the HM062 or HM063. These materials may require new moulds.

## Installation Recommendation, HiMod® Slydring® for Rod According to ISO 10766 Groove Dimension

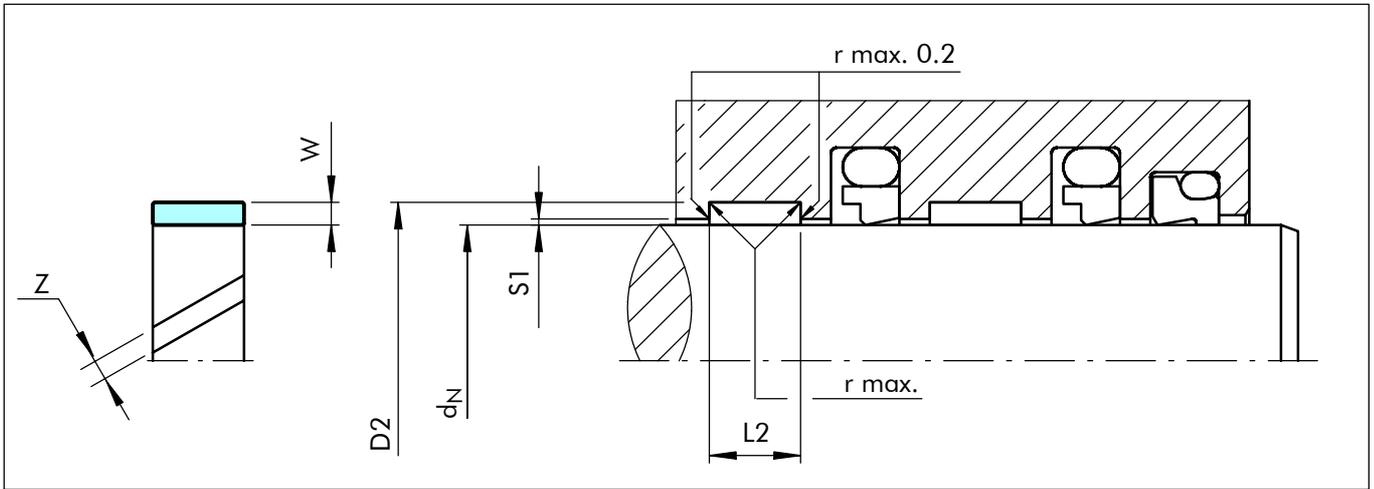

Figure 13 Installation drawing

**Table XXVIII Installation Dimensions**

Serial No.	Rod Diameter <sup>1)</sup>	Groove Diameter	Groove Width	Ring Thickness
	$d_N$ f8/h9	$D_2$ H8	$L_2 + 0.2$	$W$
GR43	10 - 50.0	$d_N + 3.10$	4.00	1.55
GR65	15 - 140.0	$d_N + 5.00$	5.60	2.50
GR69	20 - 220.0	$d_N + 5.00$	9.70	2.50
GR73	80 - 300.0	$d_N + 5.00$	15.00	2.50
GR75	200 - 300.0	$d_N + 5.00$	25.00	2.50
GR98	280 - 300.0	$d_N + 8.00$	25.00	4.00

<sup>1)</sup> Recommended diameter ranges.

For Slydring® to other standards, e.g French standard NF E 48-037, please contact us.

**Table XXIX Recommended Radii for Groove Dia.**

$D_N$	$r$ max.
8 - 250	0.2
>250	0.4

**Table XXXI Recommended Gap**

$D_N$	Ring Gap $Z$
10 - 39	2 - 2.5
40 - 149	2 - 3
>150	3 - 4

**Table XXX Radial Clearance S1 <sup>2)</sup>**

Rod Dia. $d_N$	S1 min.	S1 max.
8 - 20	0.20	0.30
20 - 100	0.25	0.40
101 - 250	0.30	0.60
251 - 300	0.40	0.80

<sup>2)</sup> Specifications valid only in the area of the Slydring®, but not for the seal area.

**Table XXXII Surface Roughness**

Parameter	Mating Surface $\mu\text{m}$	Groove Surface $\mu\text{m}$
	HiMod® Materials	
$R_{max}$	1.00 - 4.00	< 16.0
$R_z$ DIN	0.63 - 2.50	< 10.0
$R_a$	0.10 - 0.40	< 2.5

All sizes printed in **bold** type conform to ISO 10766 and should be preferred for use.

## Ordering Example

Slydring® for rod diameter  $d_N = 63.0$  mm  
 Series GR69 from Table XXVIII  
 Groove width: 9.70 mm, ring thickness: 2.50 mm

Material: HiMod® HM061  
 (other materials see Table I)

Standard design: With angle cut  
 Design code: 0

Order No.: GR6900630-HM061  
 (from Table XXXIII)

## Note

HM062 and HM063 materials can be ordered by replacing the HM061 material code in the Order Number.

Please check with your local B+S entity the availability and price of the HM062 or HM063. These materials may require new moulds.

## Installation Recommendation, HiMod® Slydring® for Rod Non ISO 10766 Groove Dimension

## Ordering Example

For Polypac Slydring<sup>®</sup> Ref. No. I/DWR 40/2

Rod diameter  $d_N = 40.0$  mm

Groove width: 9.70 mm, ring thickness: 2.00 mm

Material: HM061  
(other materials see Table I)

Standard design: With straight cut  
Design code: D

Order No.	GR49	D	0400	-	HM061
Serial No.					
Design code, standard					
Rod diameter x 10					
Quality Index (Standard)					
Material No.					

## Note

HM062 and HM063 materials can be ordered by replacing the HM061 material code in the Order Number.

Please check with your local B+S entity the availability and price of the HM062 or HM063. These materials may require new moulds.

## ■ Luytex® Slydring® for Piston and Rod

### Description

Luytex® Slydring® of fabric reinforced composite materials is used in hydraulic cylinders exposed to high loads that can occur e.g. in mobile hydraulics and presses. The high compressive strength, good sliding behaviour and the exceptional wear resistant properties ensure a long service life.

Slydring® of Luytex® fabric composite materials is produced as standard from tubular material. It is manufactured with a angle cut and already has the necessary gap "Z".

For large diameters > 300 mm, sections or segments can be produced from Luytex® C320, C380 strip material. This offers economical solutions for non-standard diameters or when quantities are limited. Strip material is coiled to a diameter of 200 to 300 mm and can be ordered either:

- cut and finished to the required length ( see page 6)
- coils at full lengths of 2 m or 3 m (see next page)

Strip material requires more care in fitting, in particular if the diameter is below 200 to 300 mm.

### Advantages

- Dimensionally stable and vibration absorbing
- Even distribution of high radial forces
- Good sliding and dry running properties
- High wear resistance
- Good wiping effect
- Long service life.

### Application Examples

Luytex® Slydring is widely used as a bearing element for heavy duty hydraulic equipment:

- Hydraulic actuators
- Mobile hydraulics
- Excavators
- Construction equipment
- Forrestry machinery
- Mining
- Steel mills
- Presses
- Water locks
- Marine engineering

### Technical Data

Velocity: Up to 1 m/s, with reciprocating movements

Temperature: - 60°C to + 120°C

Pr under dynamic conditions (C380, C320, C932): max. 100 N/mm<sup>2</sup> at 25°C  
max. 50 N/mm<sup>2</sup> >60°C

Ultimate compressive strength (C380, C320): max. > 300 N/mm<sup>2</sup>  
(C932): max. 260 N/mm<sup>2</sup>

When calculating the width of Luytex® Slydring® it is recommended to use a safety factor f=2 (see page 7).

#### Important Note:

The above stated limits for pressure and speed are maximum values individually. Friction heat generated by the combination of pressure and speed may cause local heat built-up. Care should be taken not to apply high values for pressure and speed at the same time.

### Materials

#### Luytex® C320

Luytex® C320 is a fabric composite material made of a thermosetting polymer, reinforced by a fine plastic mesh and lubricant additives impregnated throughout the material. It has a very high resistance to wear, good dry-running properties and dampens vibrations.  
Colour: dark gray.

#### Luytex® C380

Luytex C380 is the standard material, this turquoise coloured composite is a further development of the proven C320. It is most versatile; suitable for all commonly used hydraulic fluids such as mineral or synthetic oils, as well as water based fluids. It is an excellent electrical insulator and features enhanced sliding properties in various media.

#### Luytex® C932

A composite of phenolic resin impregnated into a fine cotton fabric. The material stiffness is higher than C380 / C320. The use in water based fluids is not recommended.

Colour: yellow-brown.

**Table XL Serial Numbers for Luytex<sup>®</sup> Slydring<sup>®</sup> finished parts, ready to fit**

Piston Serial No.	Rod Serial No.	Groove Width L <sub>2</sub>	Ring Thickness W
GP43	GR43	4.00	1.55
GP65	GR65	5.60	2.50
GP69	GR69	9.70	2.50
GP73	GR73	15.00	2.50

GP98	GR98	25.00	4.00
GP98X	GR98X	25.00	4.00

Note that customer specific sizes can be supplied without tooling costs.

**Table XLI Serial Numbers for coiled strip material C380 or C320**

Thickness	Groove Width	2m length	3m length
2.50	9.70	GM69A0000	--
2.50	15.00	GM73A0000	GM7330000
2.50	25.00	GM75A0000	GM7530000
4.00	25.00	GM9820000	GM9830000

### Installation Recommendations

In order to protect the seal and guide system against ingress of foreign particles, we recommend the use of Turcite<sup>®</sup> Slydring<sup>®</sup> in combination with Luytex<sup>®</sup> Slydring<sup>®</sup>. The larger face area of these rings (Series GP 99 from Table IV) embeds the contaminant particles when present in the system and keeps them away from the actual guides and seals (Figure 15). Reducing the piston diameter at both ends allows the particles to become embedded on the face side.

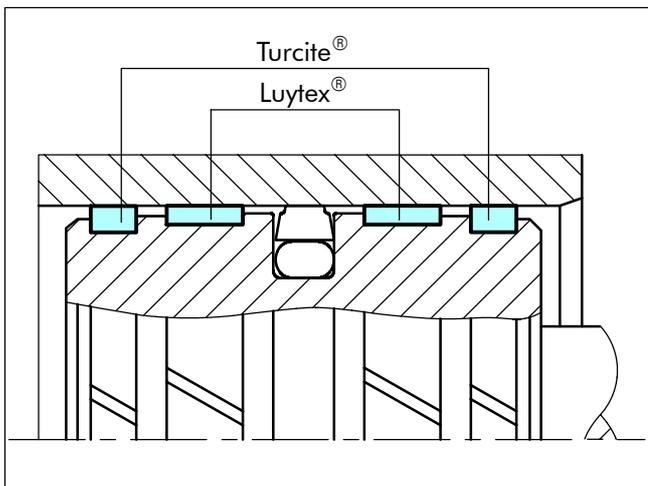

Figure 15 Arrangement of the Slydring<sup>®</sup> on the piston

**Installation Recommendation, Luytex® Slydring® for Piston According to ISO 10766 Groove Dimension**

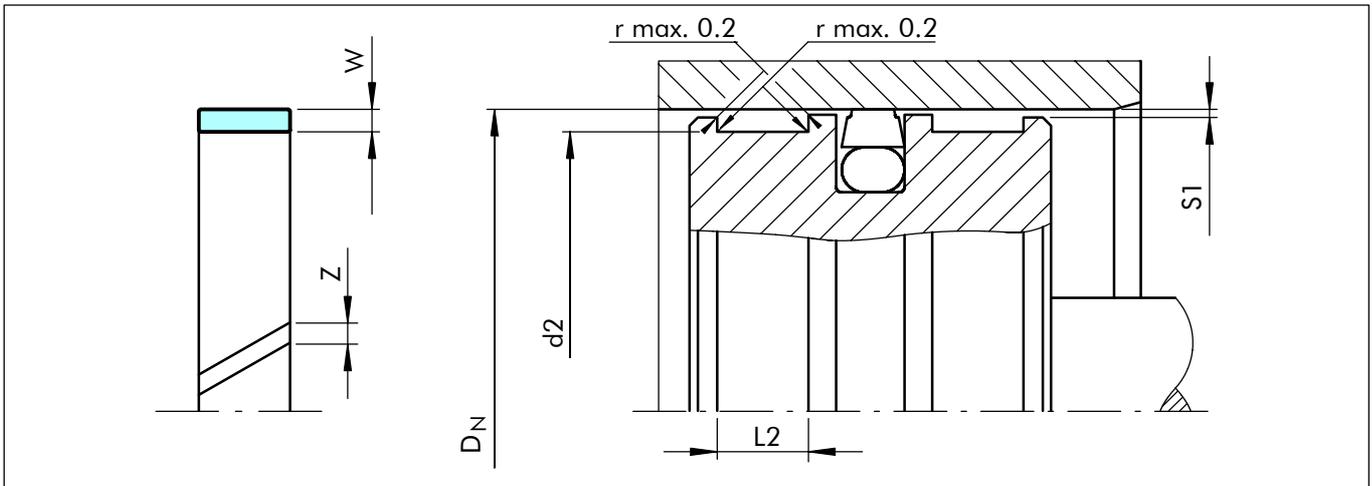

Figure 16 Installation drawing

**Table XLII Installation Dimensions**

Serial No.	Bore Diameter <sup>1)</sup>	Groove Diameter	Groove Width	Ring Thickness	Ring Gap <sup>2)</sup>
	D <sub>N</sub> H9	d <sub>2</sub> h8	L <sub>2</sub> +0.2	W	Z
GP43	10 - 50.0	D <sub>N</sub> -3.10	4.00	1.55	1 - 3
GP65	16 - 125.0	D <sub>N</sub> -5.00	5.60	2.50	2 - 6

GP75X	1000 - 1500.0	D <sub>N</sub> -5.00	25.00	2.50	33 - 48
GP98	280 - 999.9	D <sub>N</sub> -8.00	25.00	4.00	10 - 33
GP98X	1000 - 1500.0	D <sub>N</sub> -8.00	25.00	4.00	33 - 48

<sup>1)</sup> Recommended diameter ranges. <sup>2)</sup> Calculation of the linear length, see page 8.

For Slydring® to other standards, e.g French standard NF E 48-037, please contact us.

**Radial clearance S1**

The minimum radial gap is to be calculated taking into account;

- the fitting tolerances of the hardware
- the tolerance on the ring thickness
- an allowance for wear
- in case of high radial loads an allowance for elastic deformation
- a safety margin to avoid metal-to-metal contact

The gaps S1 can be chosen larger than near to the seal (attention: take care of gap dimension for the seal) thus allowing slight tilting of the piston, still without metal-to-metal contact.

It also allows foreign particles to be wiped away by the Slydring® rather than being squeezed between the metal

components. The slot 'Z' allows fluid to pass across the ring thus preventing fluid pressure build-up which might cause extrusion of the guide ring. To ensure the ring cannot escape out of the groove it is recommended to observe following radial gap sizes as maximum:

- 0.50 mm for GP43 ( 1.55 mm thickness)
- 0.90 mm for GP65 to GP75 ( 2.50 mm thickness)
- 1.50 mm for GP98 and GP98X ( 4.00 mm thickness)

**Table XLIII Surface Roughness**

Parameter	Mating Surface $\mu\text{m}$	Groove Surface $\mu\text{m}$
	Luytex® Materials

All sizes printed in **bold** type conform to ISO 10766 and should be preferred for use.

Additional sizes not covered by this list are also held in stock. Also please note that customer specific sizes can be supplied without tooling costs.

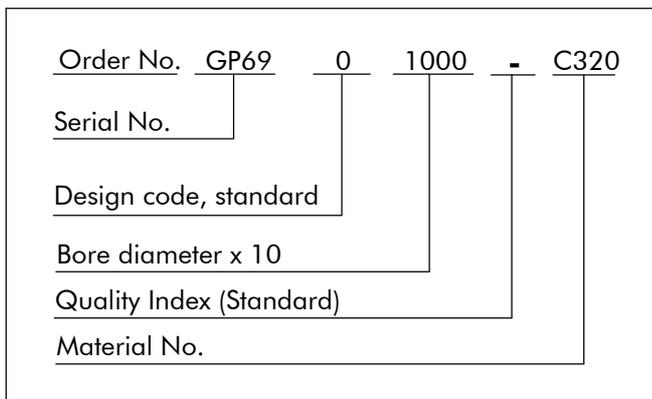

## Ordering Example

Slydring® for bore diameter  $D_N = 100.0$  mm  
 Series GP 69 from Table XLII  
 Groove width: 9.7 mm, ring thickness: 2.50 mm

Material: Luytex® C320  
 (other materials see Table I)

Standard design: With angle cut  
 Design code: 0

Part No.: GP6901000  
 (from Table XLIV)

The Order No. can be formed from the example above.

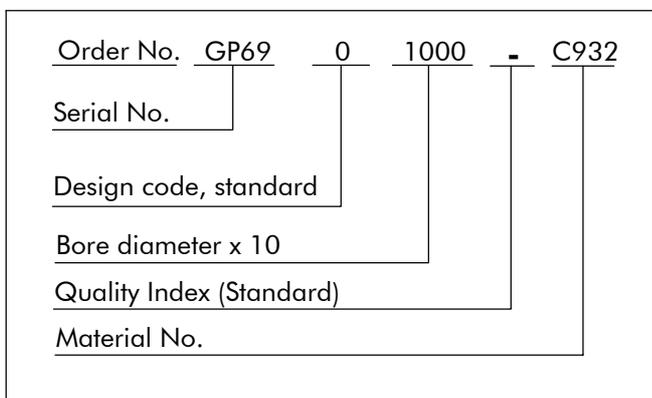

## Ordering Example

Slydring® for bore diameter  $D_N = 100.0$  mm  
 Series GP 69 from Table XLII  
 Groove width: 9.7 mm, ring thickness: 2.50 mm

Material: Luytex® C932

Standard design: With angle cut  
 Design code: 0

Part No.: GP6901000  
 (from Table XLIV)

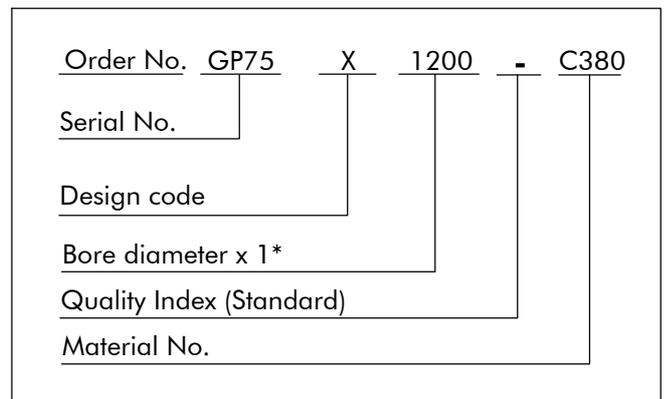

## Ordering Example for diameter > 1000 mm

Slydring® for bore diameter  $D_N = 1200.0$  mm  
 Series GP75X from Table XLII  
 Groove width: 25.0 mm, ring thickness: 2.50 mm

Material: Luytex® C380

Part No.: GP75X1200  
 (from Table XLIV)

\* For diameters  $\geq 1000.0$  mm multiply only by factor 1.

## Please Note

Luytex® Slydring® for pistons can be used as rod guide ring, f.inst.

### GP69 0 1000 - C320

is identical and can be replaced with

### GR69 0 0950 - C320

## Installation Recommendation, Luytex® Slydring® for Rod According to ISO 10766 Groove Dimension

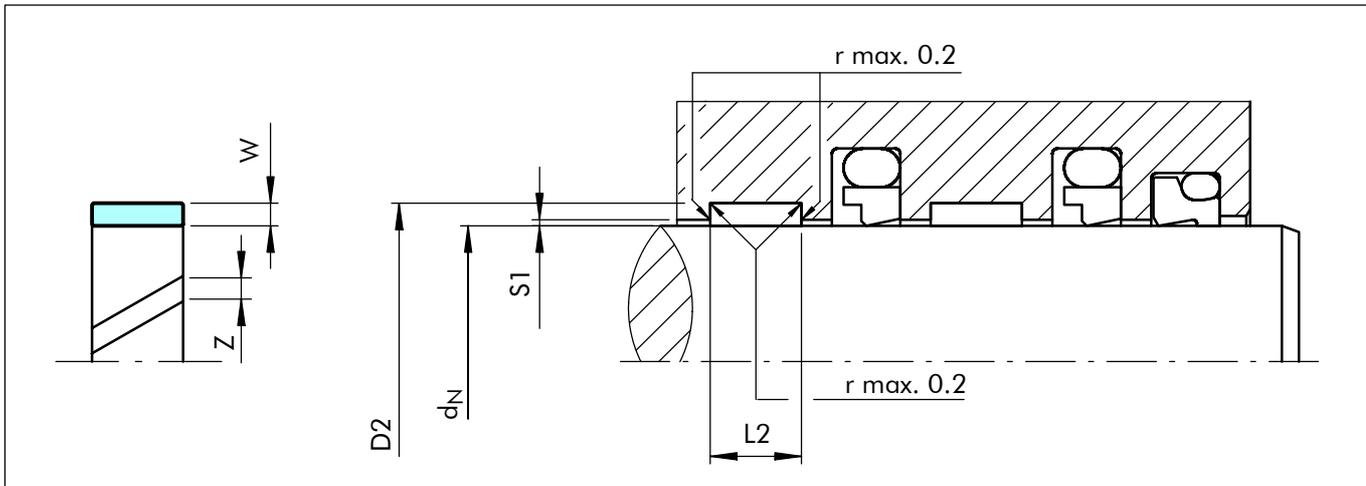

Figure 17 Installation drawing

**Table XLV Installation Dimensions**

Serial No.	Rod Diameter <sup>1)</sup>	Groove Diameter	Groove Width	Ring Thickness	Ring Gap <sup>2)</sup>
	$d_N$ f8/h9	$D_2$ H8	$L_2$ +0.2	$W$	$Z$
GR43	8 - 50.0	$d_N + 3.10$	4.00	1.55	1 - 3
GR65	16 - 140.0	$d_N + 5.00$	5.60	2.50	2 - 6
GR69	25 - 250.0	$d_N + 5.00$	9.70	2.50	2 - 9
GR73	75 - 500.0	$d_N + 5.00$	15.00	2.50	4 - 17
GR75	120 - 999.9	$d_N + 5.00$	25.00	2.50	5 - 33
GR75X	1000-1500.0	$d_N + 5.00$	25.00	2.50	33- 49
GR98	280 - 999.9	$d_N + 8.00$	25.00	4.00	10 - 33
GR98X	1000-1500.0	$d_N + 8.00$	25.00	4.00	33 - 49

<sup>1)</sup> Recommended diameter ranges. <sup>2)</sup> Calculation of the linear length, see page 8.

For Slydring® to other standards, e.g French standard NF E 48-037, please contact us.

### Radial clearance S1

The minimum radial gap is to be calculated taking into account;

- the fitting tolerances of the hardware
- the tolerance on the ring thickness
- an allowance for wear
- in case of high radial loads an allowance for elastic deformation
- a safety margin to avoid metal-to-metal contact

The gaps S1 can be chosen larger than near to the seal (attention: take care of gap dimension for the seal) thus allowing slight bending of the rod, still without metal-to-metal contact. It also allows foreign particles to be wiped away by the Slydring® rather than being squeezed between the metal components (see page 8). The slot 'Z' allows fluid to pass across the ring thus preventing fluid pressure build-up which might cause extrusion of the guide ring. To ensure the ring cannot escape out of the groove it is recommended to observe following radial gap

sizes as maximum:

- 0.50 mm for GR43 (1.55 mm thickness)
- 0.90 mm for GR65 to GR75 (2.50 mm thickness)
- 1.50 mm for GR98 and GR98X (4.00 mm thickness)

**Table XLVI Surface Roughness**

Parameter	Mating Surface $\mu\text{m}$	Groove Surface $\mu\text{m}$
	Luytex® Materials	
$R_{\text{max}}$	1.00 - 4.00	< 16.0
$R_z$ DIN	0.63 - 2.50	< 10.0
$R_a$	0.10 - 0.40	< 2.5

All sizes printed in bold type conform to ISO 10766 and should be preferred for use.

Additional sizes not covered by this list are also held in stock. Also please note that customer specific sizes can be supplied without tooling costs.

# Luytex® Slydring® - Wear Ring

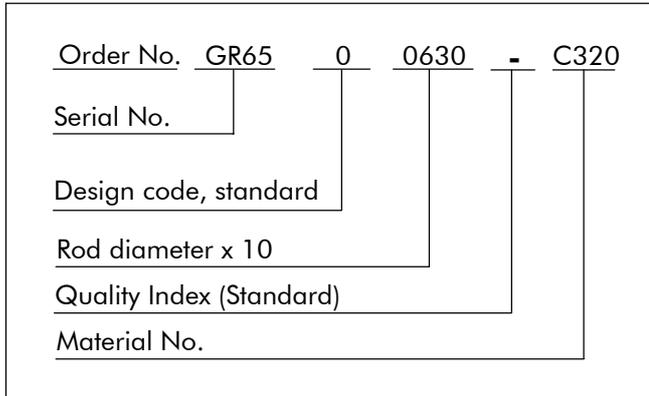

## Ordering Example

Slydring® for rod diameter  $d_N = 63.0$  mm  
Series GR 65 from Table XLV  
Groove width: 5.6 mm, ring thickness: 2.50 mm

Material: Luytex® C320  
(other materials see Table I)

Standard design: With angle cut  
Design code: 0

Part No.: GR6500630  
(from Table XLVII)

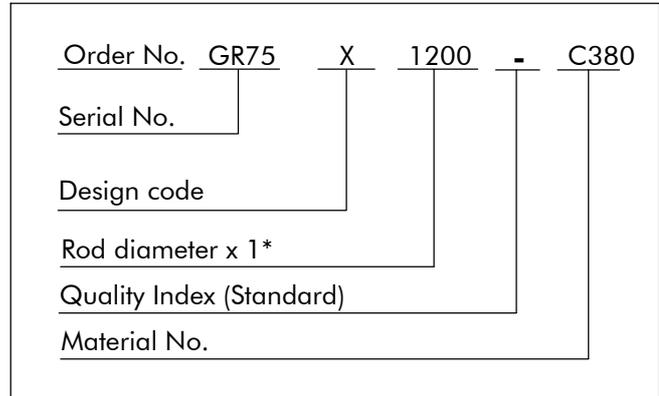

## Ordering Example for diameter > 1000 mm

Slydring® for rod diameter  $d_N = 1200.0$  mm  
Series GR 75X from Table XLV  
Groove width: 25.0 mm, ring thickness: 2.50 mm

Material: Luytex® C380

Part No.: GR75X1200  
(from Table XLVII)

\* For diameters  $\geq 1000.0$  mm multiply only by factor 1.

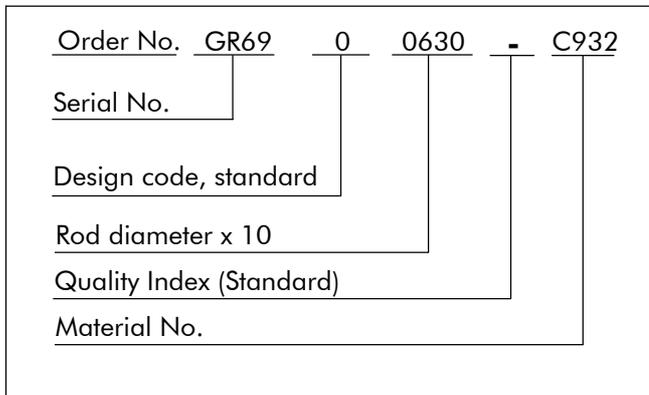

## Ordering Example

Slydring® for rod diameter  $d_N = 63.0$  mm  
Series GR 69 from Table XLV  
Groove width: 9.7 mm, ring thickness: 2.50 mm

Material: Luytex® C932

Standard design: With angle cut  
Design code: 0

Part No.: GR6500630  
(from Table XLVII)

## Please Note

Luytex® Slydring® for rods can be used as piston guide ring, f.inst.

### GR65 0 0630 - C320

is identical and can be replaced with

### GP65 0 0680 - C320
