Features of FUKUTA servomotors

- * **High dynamical response :**

The induction-type servomotor doesn't use permanent magnets. The high relation between torque and inertia-together with a low secondary reactance of the rotor-enables high dynamical performances with considerable acceleration and deceleration available over all speed ranges.

- * **Operational gradually :**

The variation of speed is obtained through absolute stable rotary motion and servo-action by maintaining the torque ripple very low over entire speed range, since the torque is generated by a high-density flux with perfect magnetic distribution drived from the induced sinusoidal current.

- * **Excellent relation between maximum and rated torque :**

The FUKUTA servomotor enables a high relation between current peak and rated current so to enable high rates of maximum torque. Furthermore, the servomotors present an extremely favorable relation between torque and volume / weight which permits compact applications and best use of the available space.

- * **Sturdy & simple construction not requiring maintenance :**

Since the FUKUTA servomotors do not have permanent magnets, there's no risk of demagnetization, of breakage due to fragility from vibrations or impacts, especially for the servomotors used on moving machines. Moreover, they do not need any position detector, because the direction of magnetic flux is determined by the current. The use of encoder on the motor axis enables controlling of the speed and is a valid answer where accuracy, repeatability, and positioning control are required. The structure therefore is extremely simple, sturdy & reliable and does not require any maintenance, since there are no collectors, carbon-brushes or magnets.

- * Class H insulation is provided as a standard as well as encoder, 1024 ppr, and thermal protector.
 - * Motor type of F#80 ~ F# 90 is vertical.
 - * Motor type of F#100 ~ F#132 is both vertical and horizontal.
 - * There are low inertia types for 3.7Kw and 1.5Kw on request.
 - * All the motors are built in IP54 protection and balancing according to ISO2373 grade R.
-

Typical application fields

The wide range of servomotors combined with the respective drivers satisfies the most different and multiple application purposes, so to enable optimum motordrives for industrial machinery and robots. The FUKUTA servomotors are addressd to applications where absolute reability, absence of any maintenance, positioning accuracy, high perormances and velocity are required.

Some applications fields as an example:

- * Iron & steel processing machines
- * Plastic extruder machines
- * Paper making and processing machines
- * Printing machines
- * CNCcontrolled machines tools
- * Textile machines
- * Bag & can making machines
- * General industrial machinery
- * Slitting & rewinding machines
- * Plastic / Rubber injection machines
- * Conugated card board & box processing machines
- * Packing machines
- * Food & beverage processing machines
- * Dyeing & stamping machines
- * Automotive industry

輸出 Output(kw)	75	90	110
框號 Frame No.	180S	180M	180L
極數 Poles	6		
轉動慣量 Rotor Inertia I (kgm ²)	0.309	0.445	0.622
重量 Weight (kg)	360	400	475
編碼器 Encoder	1024PPR 5Vdc 2CH+Z		
風扇 Elec. Fan	R2E225型(Type)1a 230V 50/60Hz 155/215W		
軸承 Bearings	LS:NUP316	OS:6314C3	
一般條件 General Data			
安裝方式 Mounting	IM 2001 (B3 B5)		
保護方式 Protection	IP54		
轉子平衡 Rotor Balancing	R級(ISO2373) R Degree		
絕緣系統 Insulation	H級 Class H		
冷卻系統 Cooling Sys.	強制通風 Forced Air Cooled		
熱保護 Thermal Protection	熱保護器(常閉) Thermal Protector (NC)		
噪音 Noise	80dBA		
周溫 Ambient Temp.	-15°C ~ 40°C		
高溫 Altitude	海拔1000米 1000m ASL
