HEMPEL'S LIGHT PRIMER 45550

SURFACE PREPARATION:	depending on type. According to separate APPLICATION INSTRUCTIONS	
APPLICATION CONDITIONS:	Use only where application and curing can proceed at temperatures above: 5°C/41°F. The temperature of the paint itself should be above: 15°C/59°F. The best result is obtained at: 15-20°C/59-68°F. The surface must be completely clean and dry at the time of application and its temperature must be above the dew point to avoid condensation. In confined spaces provide adequate ventilation during application and drying.	
SUBSEQUENT COAT:	According to specification.	
REMARKS:		
Film thicknesses/thinning:	May be specified in another film thickness than indicated depending on purpose and area of use. This will alter spreading rate and may influence amount of thinning, drying time and recoat interval. The indicated dry film thickness of 100 micron/4 mils (for spray application) and 60 micron/2.4 mils (for brush application). Launching should not take place until the last coat of the product has cured for 1 week (20°C/ 68°F). The first coat of the chosen antifouling/enamel must be applied after the last coat of the product according to the interval given in separate APPLICATION INSTRUCTIONS. If this interval is exceeded the surface must be sanded and a new thin coat of the product must be applied. Before recoating after exposure in contaminated environment, clean surface thoroughly with high pressure fresh water hosing and allow drying.	
Nota:	HEMPEL'S LIGHT PRIMER 45550 For professional use only.	_
